QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 105.] **Marriages**—*October, November, December*, 1874.
Births and **Deaths**—*January, February, March*, 1875. [Price 8½*d.*

General Register Office, Somerset House,
1st May 1875.

In the UNITED KINGDOM the *births* of 282,793 children, and the *deaths* of 218,213 persons of both sexes, were registered in the three months ending 31st *March* 1875. The natural increase of population was thus 64,580.

The registered number of persons married in the quarter ending 31st *December* 1874 was 141,622.

The resident population of the United Kingdom in the middle of 1875 is estimated at 32,737,405; that of England and Wales at 23,944,459, of Scotland at 3,495,214, and of Ireland at 5,297,732. The birth-rate in the United Kingdom in the *first* quarter of 1875 was 35·0 per 1000, and the death-rate 27·0. The marriage-rate in the *fourth* quarter of 1874 was 17·3 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Reports of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2194 Registrars in all the districts of England during the quarter ending 31st March 1875; and the MARRIAGES in 13,618 churches or chapels, in 7375 registered places of worship unconnected with the Established Church, and in 627 Superintendent Registrars' Offices, in the three months ending 31st December 1874.

The marriage-rate in the last quarter of 1874 was below the average; and still lower than the rates in the corresponding quarters of the three previous years. But taking the marriages all the year through they were at the average. In the first three months of the present year the birth-rate was slightly below the average. The mortality was much above the average. For every eight deaths expected from the average nine were registered. The weather of the last six weeks of 1874 had been severe; but January was mild under the west and south-west winds until the last day of the month, when cold set in and reigned to the end of the quarter. The unkindly north-east and east winds predominated through February and March; so pulmonary diseases prevailed to an unusual degree; indeed, it is not certain that they had not an epidemic taint. May not these affections take that form as pleuro-pneumonia does in cattle?* The prevailing pneumonia and bronchitis demand the attention of pathologists. Old people were the greatest sufferers. The epidemic of scarlet fever was subsiding, but it was still fatal in many places.

* Epidemics of pleurisy have been recorded. See Sprengel: Histoire de la Médecine, vol. 3, pp. 87–90.

Whooping-cough was the only other zymotic disease epidemic, and that attained no great intensity. The price of wheat was low; the prices of beef, mutton, potatoes, and coal fell in the wholesale market, but the consumers scarcely enjoyed their share of the advantage.

Marriages.

During the last three months of 1874 the number of persons married was 116,874, equal to an annual rate of 19·6 per 1000 of the estimated population. The average marriage-rate in the corresponding quarter of the ten years 1864–73 was 20·0, and the rate last quarter was lower than in the last quarter of any year since 1870. In the eleven registration Divisions the marriage-rate in the three months ending 31st December last ranged from 15·0 and 16·8 in the South-western and South Midland agricultural counties, to 20·8 and 21·8 in the North Midland counties and Yorkshire. The marriage-rate was so low as 13·1 in Cornwall, whereas it was equal to 23·6 in Northumberland, and 23·9 in Nottinghamshire. Compared with the average number of marriages in the corresponding quarters of the three years 1871–3, those recorded in the last quarter of 1874 showed a decline of 2·7 per cent.; in the South Midland counties the decline of marriages was equal to 9, in the West Midland 7, and in the South-western counties 6 per cent. In the counties of Cornwall and Bedfordshire the decrease of marriages was equal to 18, in Huntingdonshire 14, and in Cambridgeshire 13 per cent. In Wales the marriages in the last three months of 1874 somewhat exceeded the average numbers in the three preceding corresponding quarters, and even in South Wales they showed an increase of 2·7 per cent. The effect of the present extensive lock-out and strike in South Wales upon the marriage-rate in that part of the Kingdom will appear in the return for the first three months of this year, which so far as marriages are concerned is not yet available.

Births.

During the quarter ending 31st March last 215,251 births were registered, equal to an annual rate of 36·5 per 1000, which showed a further decline from the rate that prevailed in the corresponding period of 1873 or 1874, and was 0·5 below the average rate in the first quarter of the ten years 1865–74. Compared with the number returned in the corresponding quarter of the three years 1872–3–4, the births registered last quarter showed an increase of only 1·1 per cent., whereas the estimated increase of population between the middle of 1873 and the middle of 1875 was equal to 2·5 per cent. The annual birth-rate in the first quarter of this year did not exceed 30·6 and 31·3 per 1000 in the agricultural counties of the South-western and South-eastern Divisions, whereas it was equal to 40·0 in the manufacturing counties of Lancashire and Cheshire, and 41·3 in the mining counties of the Northern Division.

In the eighteen large English towns furnishing weekly returns, the birth-rate last quarter averaged 39·3 per 1000, and exceeded by 2·8 per 1000 the average rate in all England; it ranged from 34·5 and 35·3 in Portsmouth and Norwich, to 44·8 and 47·6 in Sunderland and Salford. In fifty other large towns the birth-rate averaged 38·4 per 1000, and was nearly one per 1000 lower than in the eighteen largest towns; it did not exceed 23·8, and 25·4 in Cheltenham and Bath, whereas it was so high as 50·8 in Swansea, and 53·2 in Wigan. The present population of these two last-mentioned towns is probably somewhat under-estimated.

Movement of the Population.

The births registered during the three months ending 31st March last exceeded the registered deaths in the same period by 52,737; whereas the excess of births over deaths in England and Wales during the first quarter of 1874 was 77,909. This decline in the natural increase of population was principally due to the marked increase in the number of deaths caused by the severity of the past winter.

In order accurately to estimate the net increase or decrease of a population during a given period, it would be necessary to know the amount of emigration or immi-

gration that had taken place, or at any rate the balance between the two. The records of immigration are, however, far from complete, although the returns published by the Board of Trade afford the means for judging of the rate of emigration. From these returns it appears that during the first three months of this year 22,978 emigrants sailed from the various ports of the United Kingdom at which emigration officers are stationed. After distributing proportionately 204 whose nationality was undistinguished, and excluding 2957 who were foreigners, the emigrants of British origin were 20,021, including 12,374 English, 1784 Scotch, and 5863 Irish. The proportions of British emigrants last quarter to a million of the populations of the three respective divisions of the United Kingdom were 517 in England, 510 in Scotland, and 1107 in Ireland. The number of English emigrants showed a marked decline, while those of Scotch and Irish showed a slight increase upon the reduced numbers in the first quarter of 1874. The total number of emigrants was lower than in any corresponding quarter since 1862, the most marked decrease being shown in the number of those whose destination was the United States. Of the 22,978 emigrants last quarter, 66 per cent., however, left these shores for the United States, 27 per cent. for the Australian Colonies, 1·5 per cent. for British North America, and 6 per cent. for all other places.

Prices, Pauperism, and Meteorology.

The average price of wheat in the first three months of this year was 42*s.* 6*d.*, and showed a further considerable decline from the price which prevailed in the four preceding quarters ; the price in the first quarter of 1874 was 62*s.* 2*d.* The quoted price of wheat was lower last quarter than in any quarter since March 1870, when the average price was 42*s.* 3*d.* The price of best potatoes was also much lower, and averaged 96*s.* 3*d.* last quarter, against 207*s.* and 119*s.* 6*d.* in the corresponding periods of 1873 and 1874. The wholesale mean price of beef and mutton at the Metropolitan Meat Market, by the carcase, has during the past three quarters been almost stationary at 6½*d.* per lb. ; during the first three months of this year the mean price was 6½*d.* both for beef and mutton. The mean price of mutton in the March quarter of 1873 was 7⅝*d.* The average price per ton of the best sea-borne coal in the London Market, put in barge from the collier in the Thames, was 22*s.* 5*d.*, against 19*s.* 9*d.*, 33*s.* 1*d.*, and 23*s.* 5*d.* in the three preceding corresponding quarters. The average price of consols during the quarter was 92*l.* 15*s.*, and the average minimum rate of discount charged by the Bank of England during the three months was 3*l.* 14*s.*

The average number of paupers relieved on the last day of each week during the quarter, derived from returns furnished by the Local Government Board, was 768,612, of which 146,800 received in-door, and 621,812 out-door relief. The number of in-door paupers showed a slight increase upon that in the corresponding period of 1874, although 2·4 per cent. less than in the March quarter of 1873. The average number of paupers receiving out-door relief declined 8·7 per cent. between the March quarters of 1873 and 1874, and a further 3·1 per cent. between 1874 and 1875.

The remarks upon the meteorology of the quarter, and the accompanying tables, furnished by Mr. Glaisher, F.R.S., will be found on pp. 65–72. The period of severe cold which set in on 21st November 1874 ended on 1st January, the mean temperature of which month was equal to 43°·4, and exceeded by 7° the average for the same month in 104 years. Since the year 1771 there have only been three Januaries of higher temperature than that of this year. On the last day of January cold weather again set in, and lasted until nearly the end of the quarter. During 33 days of February and March the direction of the wind was between north and east. The mean temperature of February was 35°, 8°·4 lower than that of January, and 3°·6 lower than the average in 104 years ; in March the mean was 40°·2, and 0°·9 below the same average. The mean temperature of the quarter was 39°·5 and 0°·8 above the average ; in those large towns furnishing returns the mean for the quarter ranged from 38°·4 in Norwich and Nottingham, to 40°·9, in Bristol, and 41°·2 in Sunderland.

The fall of rain in the quarter at Greenwich was 4·4 inches, and 0·6 of an inch below the average; the amount measured in January was in excess, whereas it was below the average both in February and March. The average rain-fall at the several stations of observation between latitudes 50° and 55° was 6·6 inches; between 52° and 53° the fall was only 4·8 inches, while it was 8·7 inches between 50° and 51°. The measured rain-fall in the several large towns ranged from 3·5 inches in Sunderland, to 8·1 in Bristol.

State of the Public Health; Deaths.

During the first quarter of this year 162,514 deaths were registered, equal to an annual rate of 27·5 per 1000, which exceeded the average rate in the corresponding period of the ten years 1865–74 by 3 per 1000. During the first quarter of each of the 37 years 1838–74 the English death-rate averaged 24·8 per 1000, and on only four occasions during that period has the death-rate of last quarter been equalled or exceeded; the rate was 28·5 in the first quarter of 1847, 27·9 in 1848, 29·1 in 1855, and 27·5 in 1864. Only twice during the past 20 years has the rate of mortality in the first or winter quarter of the year been so high as in the three months now under notice. Temperature to a great extent rules the mortality in the first quarter of the year, and severely cold weather prevailed in each of the five winter quarters of high mortality mentioned above. The mean temperature of the first quarter of the year during the 30 years 1845–74, was as nearly as possible 40°; in six of those years the mean temperature in the first quarter fell below 38°, and in four exceeded 42°. The rate of mortality in England and Wales during the six cold winters of 1845, 1847, 1855, 1858, 1864, and 1865, averaged 27·3 per 1000. In the four mild winters of 1846, 1859, 1863, and 1872, the average rate of mortality did not exceed 23·9 per 1000. The winter quarter of 1855 was by far the coldest that has occurred since the passing of the Registration Act in 1837 rendered it possible to ascertain the number of deaths; the mean temperature was then so low as 34°·1, and the death-rate was the highest on record since 1837, namely, 29·1 per 1000. The rate of mortality, however, does not appear to be absolutely governed by the mean temperature, as the next coldest winter season was in 1845, when the temperature was 35°·4, whereas the death-rate did not exceed 25·5 per 1000, and but slightly exceeded the average rate of mortality in the first quarter of the 38 years 1838–75. The influence of low temperature upon the death-rate is undoubted, but the causes of all the fluctuations in the mortality are as yet not thoroughly understood, and demand a careful investigation. During the first quarter of this year the temperature averaged 39°·5, and yet the mortality was 27·5, and as high as in any cold winter quarter except those of 1847 and 1855. The high temperature of January last, which raised the mean temperature of the quarter, appears to have only partially counteracted the effect of the cold in December, February, and March. The rate last quarter was 0·5 per 1000 in excess of that which prevailed in 1865, when the mean temperature was so low as 36°·5. The three last days of the year were much the coldest throughout the winter, their mean temperature being but 23°·5, and the effect of this severe cold on the death-rate undoubtedly appeared in the death register during January.

In order to estimate the varying effect of the cold weather upon the death-rate in different parts of the country, it will be useful to compare the death-rate prevailing last quarter with the average rates during the ten years 1861–70. In England and Wales the rate last quarter exceeded this average by 23 per cent.; in the eleven registration Divisions they ranged from 11·9 and 17·1 per cent. in London and Yorkshire, to 31·3 and 32·4 in the North Midland and Welsh Divisions. In endeavouring to explain this wide variation in the effect of the recent cold upon the death-rate in different Divisions, it may be noticed that compared with the deaths recorded in the first quarter of 1872, during which the temperature was unusually high, those in first three months of this year showed an increase of 20 per cent.; the increase in the deaths of persons under 60 years of age was but 12 per cent., whereas those of persons aged upwards of 60 years had increased 47 per cent. Bearing this in mind, it follows that the effect of cold upon the

death-rate depends to some extent upon the proportion of persons aged 60 years and upwards in the population living in different parts of the country; this proportion was so low as 58 and 62 per 1000 in the counties of Cheshire and Lancashire, and in London, and ranged upwards to 98 and 99 in the Eastern and South-western Divisions. The proportion of persons aged 60 years and upwards is generally far greater in rural than in urban populations, partly because the mean duration of life is there greater, partly because the birth-rate is lower and the proportion of children in the population is therefore smaller, and also because the increasing tendency to aggregate in towns causes a considerable migration of the younger adults from rural to urban districts.

The annual death-rate last quarter, which averaged 27·5 in all England, ranged from 23·3 and 24·6 in the South-eastern and Eastern, to 28·6 and 31·4 in the Welsh and North-western registration divisions. In the extra-metropolitan portions of Surrey and Kent the death-rate was so low as 21·7 and 22·6, whereas it was 30·6 in Monmouthshire, and 32·0 in Lancashire. In the Outer Ring of London, being that portion of the Metropolitan Police District situated outside registration London, the death-rate was so low as 20·5 last quarter. (See Table X.)

In the principal urban population of about thirteen and a half millions of persons the death-rate averaged 28·9 per 1000, or 2·3 in excess of the mean rate in the corresponding quarter of the ten years 1865–74; in the remaining or rural population of about ten millions the death-rate did not exceed 25·7 per 1000, but the excess upon the mean rate was equal to 3·7 per 1000. The excess in the death-rate last quarter upon the average rate in the first three months of the ten previous years was equal to 8·6 per cent. in the urban, and to 16·8 per cent. in the rural population. It appears that the fatal effect of the unusually severe winter was nearly twice as great in country as it was in town. How far this result is due to the greater proportion of elderly persons in rural populations, and how much to the low wages and to the dearness of firing from which agricultural populations suffer, can only be ascertained after careful investigation.

In eighteen of the largest towns, including London, having an estimated population of more than six and a half millions, the death-rate last quarter averaged 28·9 per 1000, corresponding with the general urban rate. In the several towns the rate ranged from 22·5 and 26·7 in Portsmouth and Sunderland, to 33·2 in Liverpool, 33·5 in Salford, and 35·7 in Manchester. That these general death-rates afford a valuable test of the health or sanitary condition of these different town populations can scarcely be disputed, after full consideration of the analysis of the mortality at different ages and from different causes in these towns. Infant mortality ranged from 123 per 1000 in Portsmouth, to 213 in Leicester; the death-rate between one year and 60 from 12·6 per 1000 in Portsmouth, to 22·9 in Manchester; the rate among persons aged 60 years and upwards from 90 in Hull to 202 in Liverpool; and lastly, the death-rate from the principal zymotic diseases, which was but 1·4 and 1·9 per 1000 in Portsmouth and Bristol, ranged upwards to 5·4 both in Birmingham and Hull.

In evidence of the direct influence of temperature it may be noticed that the rate of mortality in the eighteen towns averaged 33·8 per 1000 in the first two weeks of the year, under the influence of the severe weather at the end of December, declined to 26·2 in the three following weeks in consequence of the high temperature in January, and rose again to 28·7 during the eight cold weeks that closed the quarter.

In fifty other large towns the death-rate last quarter averaged 29·2 per 1000, and slightly exceeded both the general urban rate, and the rate in the eighteen larger towns. The rate was only 19·6 in East Stonehouse, 20·4 in Dover, and 21·0 in Devonport; it was so high as 36·0 in Cambridge, 36·8 in Preston, 38·8 in Ashton-under-Lyne, 39·4 in Dudley, and 42·1 in Wigan. The zymotic rate was only 0·2 and 0·4 per 1000 in Dover and Cheltenham, whereas it was 5·7 both in Carlisle and Swansea, and 6·0 in Birkenhead; in the fifty towns it averaged 3·2 per 1000, and corresponded with the zymotic rate in the eighteen largest towns.

The 162,514 deaths at all ages last quarter included 36,019 of infants under one year of age, 78,712 of children and adults aged between one and 60 years, and 47,783 of persons aged 60 years and upwards. Infant mortality, measured by the proportion of deaths under one year to births, was equal to 167 per 1000, against 143 and 146 in the first quarters of 1873 and 1874; in the Eastern and South-eastern Divisions this rate was equal to 146 and 149 last quarter, whereas it was 178 and 180 in the North Midland and Yorkshire Divisions. In the eighteen large English towns infant mortality, measured in this manner, averaged 165 per 1000, ranging between 123 in Portsmouth and 213 in Leicester.

The rate of mortality among children and adults aged one year and under 60 years was equal to 14·9 per 1000, against 13·9, 12·3, and 13·3 in the three preceding corresponding quarters. In the eighteen large towns it averaged 16·9 per 1000, and ranged from 12·6 and 14·1 in Portsmouth and Norwich, to 21·3 and 22·9 in Oldham and Manchester.

The marked increase in the deaths of persons aged upwards of 60 years, undoubtedly the result of the severity of the winter weather, is one of the most noticeable features in the present return. As before stated the deaths of elderly persons in the first three months of this year exceeded by 47 per cent. the number returned in the same period of 1872, when the temperature was high. According to the English Life Table the average annual rate of mortality among persons aged upwards of 60 years is 71·7 per 1000, and the average rate in the first quarter of the four years 1871–4 was 82·7. In the first quarter of this year the rate was so high as 108·3 per 1000. The death-rate among persons aged more than 60 years, was equal to 98 per 1000 in the Northern, and 102 in the South-eastern and Welsh Divisions, whereas it was 117 in the West Midland, and 121 in North-western Divisions. It does not appear that this death-rate among elderly persons is governed entirely by the intensity of cold, or we should not find the rate so low as 98 in the four counties of Durham, Northumberland, Cumberland, and Westmoreland, and 104 in Yorkshire, while in the decidedly warmer counties of Wiltshire, Dorsetshire, Devonshire, and Cornwall, in the South-western Division, it was 109 per 1000. Unsanitary conditions, and not any peculiar severity of the past winter, must have caused the high death-rate of 124 per 1000 among persons aged upwards of 60 years in Lancashire. Two other counties showed excessively high death-rates among elderly people; in Wiltshire it was 119, and in Staffordshire 120. In the eighteen large English towns the death-rate among persons aged more than 60 years averaged 119 per 1000, and whereas it did not exceed 90 and 100 in Hull and Sunderland, it ranged upwards to 148 in Manchester, 153 in Wolverhampton, and 202 in Liverpool. The winter of 1874–5 was a remarkably long and severe one; a cold period lasted from the middle of November to the end of the year, and after an unusually severe January, the temperature was low, and the wind for the most part easterly throughout February and March. During the six months ending 31st March last more than 15,000 persons in England and Wales, aged upwards of 60 years, succumbed to the cold, who would have survived had the death-rate among persons of that age not exceeded the average rate which prevailed in the corresponding period of the three preceding years.

To the seven principal zymotic diseases 17,216 deaths were referred in England and Wales during the first three months of this year, of which 5050 resulted from scarlet fever, 4065 from whooping-cough, 3323 from different forms of fever, 1991 from diarrhœa, 1552 from measles, 896 from diphtheria, and 339 from small-pox. These zymotic deaths were equal to an annual rate of 2·9 per 1000, against 2·4 and 3·1 in the two preceding corresponding quarters. The zymotic death-rate did not exceed 1·5 and 1·6 per 1000 in the agricultural counties of the South-eastern and Eastern Divisions, whereas it was equal to 3·8 and 3·9 in the population of the North-western and Yorkshire Divisions, principally engaged in manufacture or mining. In the West Riding of Yorkshire and in South Wales the zymotic rate was 4·1 and 4·2 per 1000.

The annual zymotic rate, as before stated, was equal to 3·2 per 1000 in the eighteen largest and in fifty other large towns; in six of the smaller towns it was

less than one per 1000, while in the sixty-two other towns it ranged upwards to 6·0 in Birkenhead, in which measles, scarlet fever, and whooping-cough were all fatally prevalent.

The 5050 deaths referred to scarlet fever in the first three months of this year showed a decline from the number returned in the two preceding quarters, when they were 6081 and 8562 respectively. The deaths from this cause last quarter were equal to an annual rate of 0·86 per 1000, and nearly corresponded with the average rate of mortality from the disease in England and Wales during the 20 years 1850–69. Compared with the number returned in the last three months of 1874 the fatal cases of scarlet fever last quarter showed a marked decline in each of the registration divisions, except the South-eastern, in which they were slightly more numerous. The greatest proportional fatality from scarlet fever last quarter occurred in the West and East Riding of Yorkshire, where the annual death-rate from this disease was equal to 2·0 and 2·1 per 1000. In Cumberland the rate was 2·0 per 1000. Scarlet fever was especially fatal in Bradford, Dewsbury, and Goole in the West Riding, and in Hull and Patrington in the East Riding. Among other places in which the mortality from this disease last quarter was excessive may be mentioned Grays (Essex), Tiverton, Yeovil, Burton-on-Trent, Louth, and Winterton (Lincolnshire), Great Grimsby, Derby, Chesterfield, Farnworth, Accrington, Stockton, Hartlepool, Aberdare, Ystradgunlais, and Carnarvon. From information furnished by the local registrars the epidemic appeared to be generally declining during the quarter, and this opinion is supported by evidence derived from the weekly returns from the 18 large English towns; in the six and a half millions of persons living in these towns the deaths from scarlet fever averaged 146 in the first three, and had declined to 90 in the last three weeks of the quarter.

The 3323 deaths reported from different forms of fever last quarter were equal to an annual rate of 0·56 per 1000, which slightly exceeded the rate in the first quarter of 1874, but was lower than those in the corresponding quarter in any of four preceding years. The average annual fever rate in the 20 years 1850–69 was 0·92 per 1000, since which it has steadily declined, and did not exceed 0·56 either in 1873 or 1874. The fever death-rate last quarter was so low as 0·34, 0·36, and 0·40 in the principally agricultural counties of the Eastern, South-eastern, and South-western Divisions, whereas it was so high as 1·12 and 1·19 respectively among the mining population of Northumberland and Durham. In London, with its close upon three and a half millions of urban population, the fever rate last quarter was only 0·43 per 1000. An examination of the sub-district returns shows local outbreaks of enteric or typhoid fever in various places, among which the following may be noted:—Lewes, Swindon, Paignton, Marshfield (Gloucestershire), Oswestry, Burslem, Shelton, Lichfield, Congleton, Wybunbury (Cheshire), Prescot, Dewsbury, Wakefield, Malton, Durham, Embleton (Northumberland), Carlisle, Cockermouth, and Merthyr-Tydfil. Compared with the fever rate in the last quarter of 1874, that which prevailed in the first three months of this year showed a general decline, but it had increased in South Wales, Staffordshire, and Gloucestershire.

The death-rate from whooping-cough was higher than in the corresponding quarters of 1873 or 1874, and was equal to 0·69 per 1000; its distribution was general. The average whooping-cough rate in the 20 years 1850–69 was 0·52 per 1000. The 1552 deaths referred to measles gave an annual rate of 0·26 per 1000, which was considerably below the average; the disease showed special prevalence in Eton District, Falmouth, Leicester, Over (Cheshire), Warrington, Bolton, Almondbury (Yorkshire), and Maryport (Cumberland).

The deaths referred to diarrhœa somewhat exceeded the number returned in the first quarter of any year since 1869.

In England and Wales, during the first three months of this year, only 339 fatal cases of small-pox were registered, which showed a considerable decline from the number returned in any quarter of the five years 1870–4, excepting alone the third and fourth of 1873. These 339 included 37 in London, 111 in Warwickshire, of which 86 occurred in Birmingham, 54 in Lancashire, and 56 in the West Riding of Yorkshire; 16 were returned in Rochdale and 12 both in Dewsbury and Darlington Districts. The outbreak of small-pox in Keighley, which caused 37 deaths,

is the most noticeable feature connected with prevalence of this disease during last quarter. Mr. M. W. Hilles, the medical officer of health for Keighley, reports that of the 37 deaths from small-pox only five or six were vaccinated cases, whereas but two unvaccinated adults recovered from attacks; only one vaccinated child under five years of age had been attacked, this case, however, proved fatal. The sanitary condition of the town is said to be very unsatisfactory, 11 cases of small-pox having occurred within eight or ten yards of a large open cesspool.

In workhouse establishments, hospitals, and public lunatic asylums 15,216 deaths were registered during last quarter, equal to 9·4 per cent. of the total deaths; in the corresponding quarter of each of the two previous years the proportion of institution deaths was 9·7 and 9·1 per cent. Nearly half the 15,216 deaths in institutions, namely 7306, were recorded in those of the eighteen largest towns; in these towns the per-centage of deaths in institutions to total deaths was 15·2, whereas in the several towns it ranged from 7·5 in Sunderland, to 17·9 in London.

To different forms of violence 4587 deaths in England and Wales last quarter were referred, equal to an annual rate of 7·8 per 10,000 persons estimated to be living; in the agricultural counties of the Eastern Division the death-rate from violence was only 4·5 per 10,000, whereas in the manufacturing population of Lancashire and Cheshire it was equal to 10·1. In the eighteen large English towns this death-rate from violence averaged 10 per 10,000, and ranged from 5 in Portsmouth, Norwich, and Oldham, to 14 in Wolverhampton, 16 in Liverpool, and 17 in Birmingham.

During the three months 7998, or 4·9 per cent. of the deaths, were registered upon the information of the coroner, being inquest cases; the average proportion of inquest cases to total deaths in England and Wales during the five years 1870–4 was 4·9 per cent. In the eighteen towns inquests were held in 6·6 per cent. of the deaths registered last quarter, the proportion varying in the several towns from 3·5 and 3·8 in Sunderland and Hull, to 8·5 and 10·2 per cent. in Manchester and Birmingham.

Health of Foreign Cities.

A summary of the vital statistics of nineteen of the Foreign Cities which favour the Registrar-General with weekly returns will be found in Table XI. The population of these nineteen cities consists of about nine millions of persons, and the death-rate therein during the first three months of this year averaged 31 per 1000; in the several places the rates ranged from 23 and 24 in Philadelphia and Christiania, to 43 and 44 in Munich and Naples. Cholera and small-pox were fatally prevalent in Calcutta; typhus in Munich and Naples; small-pox in Vienna; and small-pox and diphtheria in New York.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1865–75,** and in each Quarter of those Years.

* Furnished by the Chief Cashier of the Bank of England.
† As published by the Comptroller of Corn Returns to the Board of Trade.
‡ These are the average prices at which seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns are the numbers enumerated in April 1871, raised to the middle of 1875 by the addition of four years and a quarter's increase, calculated on the rate which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE VII.—**Deaths** in **18 large English Towns** in the 13 Weeks ending 3rd April 1875.

(Estimated aggregate population in middle of 1875, 6,682,033; viz., 3,445,160 in London, and 3,236,873 in the 17 other Towns; see note to Table VI.)

15	York - - - - M† -	58,483	487	388	33·8	26·9	1·3	Bootham, Micklegate, and Walmgate Sub-districts.
	X.—NORTHERN COUNTIES.							
51	South Shields - - M -	93,228	1070	585	46·5	25·4	4·7	Entire District.
52	Gateshead - - - M -	56,147	683	380	49·3	27·4	2·6	Gateshead Sub-district.
54	Tynemouth - - - M -	43,093	449	256	42·3	24·1	1·8	Nrth. Shields & Tynemouth Sub-ds.
69	Carlisle - - - - M† -	34,781	273	252	31·8	29·4	5·7	St. Cuthbert & St. Mary Sub-dists.
	XI.—MONMOUTHSH. & WALES.							
82	Newport (Monmouth) M† -	32,362	355	232	44·5	29·1	2·1	Newport Sub-district.
83	Cardiff - - - - M† -	74,589	770	449	41·9	24·4	2·2	Cardiff Sub-district.
85	Merthyr Tydfil - - P -	98,576	1137	722	46·8	29·7	4·9	Lower and Upper Merthyr Tydfil and Aberdare Sub-districts.
88	Swansea - - - M -	74,920	938	567	50·8	30·7	5·7	Swansea and Llangafelach, and Llansamlet (Neath) Sub-dists.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary.

* For method of framing these estimates see note * to Table VI.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

TABLE X.—LONDON—OUTER RING. **Births, Deaths** from **All Causes,** and from the **Seven Principal Zymotic Diseases,** and the **Annual Rate of Mortality** during the 13 Weeks ending 3rd April 1875.

DISTRICTS AND SUB-DISTRICTS.	BIRTHS.	DEATHS.	DEATHS from Seven Zymotic Diseases.	ANNUAL RATE per 1000 living.		
				Births.	Deaths.	Seven Zymotic Diseases.
LONDON—OUTER RING	6322	3898	338	33·3	20·5	1·8
EPSOM (*part of*)	187	122	5	28·2	18·4	0·8
CROYDON and *part of* Godstone	800	538	45	29·5	19·9	1·7
KINGSTON (*part of*)	527	362	27	32·5	22·3	1·7
RICHMOND	239	126	11	31·9	16·8	1·5
BROMLEY (*part of*)	289	174	18	31·8	19·1	2·0

ROMFORD (*part of*)	175	92	8	43·4	22·8	2·0

Note.—In estimating the population of these Districts, upon which the birth and death rates have been calculated, it has been assumed that the rate of increase since 1871 has been the same as that which prevailed between 1861 and 1871. In calculating the rates for Uxbridge and Barnet Districts a proportion of the deaths recorded in the two Middlesex County Lunatic Asylums has been excluded as belonging to Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE XI.—**Births** and **Deaths** in the **First Quarter** of 1875 in **18 Foreign Cities.**

* The *Registration* or *Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the princi town of the district or the greater part of the population is located. The boundaries of Registration or Union Counties therefore differ more less from the boundaries of Counties (proper).

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties. ‡ See page 14, note

NOTE.—*The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epide diseases, also as to the statements respecting sanitary arrangements, &c. &c.)*

GISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND.

* The *Superintendent Registrars' Districts* are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names; they are 627 in number, and are here arranged topographically under the Registration Counties.

† These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ See page 14, note †.

II.—SOUTH EASTERN COUNTIES.—Superintendent Registrars' Districts—*continued.*

No.	Superintendent Registrars' Districts.	Area in Statute Acres.	Enumerated Population, 1871.	Marriages: Registered in Quarter ending 31 Dec. 1874.	Births: Registered in Quarter ending 31 Mar. 1875. * The present number of Superintendent Registrar's districts is 627. The above numerical arrangement—1 to 627—was adopted on 1st January 1871; Shrewsbury (No. 352.) was incorporated with Atcham (No. 351.) on 1st October 1871; and Prestwich (467*a*) became a Superintendent Registrar's district on its severance from Manchester (467) on 1st October 1874.

I.—LONDON.—Registration Sub-districts.

* The *Sub-districts* (2194 in number) are sub-divisions of *Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† The numbers of Births and Deaths, as well as the details given, "Children under 1 year of age" and the twelve subsequent headings in this Table for London, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 3rd January to 3rd April 1875.

I.—LONDON.—Registration Sub-districts—*continued.*

* 31 : 1.—Although scarlet fever is stated to have been very prevalent, only one death has been registered from that disease.
† 31 : 3.—Diphtheria is stated to have been prevalent in the parish of Shere, principally amongst children.
‡ 38 : 2.—The fatal case of cholera was that of an infant, and was registered as cholera diarrhœa.
§ 41 : 1.—Of 27 persons aged 60 years and upwards whose deaths were registered, 8 exceeded 80 years.

* 240 : 1.—The 5 deaths from scarlet fever occurred in the parish of Hockwold-cum-Wilton, where the disease is stated to have extensively prevailed during the last four months.

† 241 : 1.—Typhoid fever, which is reported to be still prevalent at Gorse Hill and Stratton St. Margaret, is attributed to defective drainage and bad water.

‡ 242 : 2.—The 3 deaths from fever is stated to have been caused by bad drainage.

§ 243 : 1.—Of the 49 deaths, 24 resulted from bronchitis.

* 448 : 3.—Of the 5 deaths from scarlet fever, 4 occurred at Runcorn, and 1 at Sutton.
† 449 : 3.—Of the 36 deaths from measles, 10 were registered in January, 23 in February, and 3 in March.
‡ 449 : 4.—The increase in the number of deaths is attributed to the fatality of measles amongst children.
§ 452 : 4.—The deaths included that of a female who was stated to have reached the age of 103 years.
‖ 456 : 5.—Scarlet fever of a malignant type has been very prevalent, but is now subsiding.

* 605 : 2.—The excess of deaths above the average is partly attributed to the prevalence of different forms of fever in unclean and ill-ventilated dwellings, and partly to the destitution caused by a "lock out" in the mineral districts.

† 624 : 2.—The deaths include that of a male whose age was stated to be 100 years.

Remarks on the Weather during the Quarter ending March 31st, 1875.

By James Glaisher, Esq., F.R.S., *&c.*

The severe cold period which set in on 21st November 1874, continued to the 1st January 1875, this was followed by a very unusually warm period, beginning on the 2nd day of January and ending on the 30th; the mean daily temperature of these 29 days was $6°\frac{3}{4}$ in excess over the average of 60 years. On several days the excess over the average was as large as 10°, 11°, and 12°, and during this period the direction of the wind was mostly S.W., or S.S.W., or W.S.W. On the only day within the period, on January 22nd, that the wind was from N.E. and N.W., the mean temperature was $2°\frac{1}{4}$ below its average. On the last day of January a cold period again set in and continued very nearly to the end of the quarter; the direction of the wind was almost continuously East or a compound of the East till March 24th; the average daily deficiency of temperature for the 54 days ending March 24th was more than 3° daily; on a few days within this period when the direction of the wind was W. or a compound of the west, the temperature was somewhat in excess of the average. From 25th March to the end of the quarter the wind was mostly from a compound of west and the daily temperature was in excess of the average to the amount of $3°\frac{1}{4}$ daily. Taking into account the very severe weather from 21st November to 1st January, and from 31st January to the end of the quarter, with the long continuance of east wind, this winter has been one of most unusual severity.

The mean temperature of January was 10°·2 higher than in December, that of February was 8°·4 lower than in January; and that of March was 5°·2 higher than in February. (From the preceding 34 years observations the mean temperature of January is lower than that of December by 1°·9; that of February is 0°·9 higher than in January; and March 2°·4 higher than in February).

The mean temperature of January above that of December over the whole country was 9°·8; that of February below that of January was 7°·2; and that of March above that of February was 4°·5.

The mean temperature of the air for January was 43°·4, being respectively 7°·0 and 5°·0 higher than the averages of the preceding 104 years and 34 years; it was 1°·7 and 1°·3 higher than the values in 1874 and 1873 respectively.

Since the year 1771 there have been three Januaries only of higher temperature than 43°·4, viz., in the year 1796 when it was 45°·3; in the year 1834 when it was 44°·4, and in the year 1846 when it was 43°·7, exceeding the value this year by 1°·9 in 1796; by 1°·0 in 1834, and 0°·3 in 1846.

The mean temperature of February was 35°·0, being 3°·6 and 4°·3 lower than the averages of the preceding 104 years and 34 years; it was 3°·7 lower than in 1874, and 0°·7 higher than in 1873.

The temperature of February was low, but since 1771 there have been 17 Februaries of still lower temperature, viz.: In the year—

1771	it was	1°·6 lower	1795	it was	0°·9 lower	1845	it was	2°·3 lower
1772	,,	0°·8 ,,	1800	,,	0°·9 ,,	1853	,,	1°·7 ,,
1773	,,	0°·1 ,,	1814	,,	1°·0 ,,	1855	,,	5°·6 ,,
1782	,,	0°·6 ,,	1827	,,	3°·4 ,,	1858	,,	0°·4 ,,
1784	,,	3°·1 ,,	1830	,,	0°·8 ,,	1873	,,	0°·7 ,,
1785	,,	4°·6 ,,	1838	,,	2°·1 ,,			

The mean temperature of March was 40°·2, being 0°·9 lower than the average of the preceding 104 years, and 1°·5 lower than the average of the preceding 34 years; it was 3°·5 and 1°·7 lower than the values in 1874 and 1873 respectively.

The mean high day temperatures of the air were 5°·1 and 2°·9 lower than their respective averages in February and March, and 4°·4 higher in January.

The mean low night temperatures of the air were 5°·9 and 0°·8 higher than their respective averages in January and March, and 2°·3 lower in February.

The mean daily ranges of temperature were all small, and were 1°·4, 2°·7, and 3°·6 lower than their respective averages in January, February, and March.

Therefore the days and nights of February and March were cold, and in January were warm.

The readings of the barometer at 160 feet above the level of the sea were above their averages from the 1st to the 9th of January, with the exception of the 4th, which was 0·07 in. below; they were alternately above and below from the 10th to the end of the month. The highest reading in the month was 30·41 ins. on the 30th, and the lowest 29·19 ins. both on the 24th and 25th, the range of readings being 1·22 in. From the 1st to the 22nd of February the readings of the barometer were all above their averages, with one exception, viz., the 12th, which was 0·08 in. below, the values for the 1st and 16th being as much as 0·41 in. and 0·47 in. in excess; from the 23rd to the end of the month the values were all below their averages. The maximum reading in the month was 30·28 ins. on the 16th, and the minimum 29·14 ins. on the 24th, the range being 1·14 in. In March the readings of the barometer were below their averages from the 1st to the 9th, a little above on the 10th and 11th, again below on the 12th and 13th, but to very small amounts, and from the 14th to the end of the month the values were all above their averages; on the last three days of the month they were no less than 0·51 in., 0·55 in., and 0·60 in. respectively in excess. The highest reading in the month occurred on the 18th, 30·37 ins., and the lowest on the 1st, 29·58 ins.; the range was 0·79 in.

At about London the mean increase of atmospheric pressure from December to January was 0·150 in., from January to February was 0·095 in., and from February to March was 0·097 in. In January, at stations north of Allenheads, there was a decrease of pressure from December to January, and an increase from all stations south of latitude 54°½. In February, there was an increase at all stations amounting to 0·08 in. at stations south of latitude 51°; increasing going northwards to 0·33 in. north of latitude 54°, and in March an increase at all stations not differing much from each other to the mean value of 0.12 in.

The fall of rain in the three months was 4·4 ins.; there was an excess in January of 1·1 in. over the average fall for January, and a deficiency in both February and March below their averages of 1·7 in., and thus a deficiency of 0·6 in. on the quarter; the deficiency of rain in the year 1874 was 5 ins., and in December 1873 was 1·7 in., so that the deficiency of rain from December 1873 to the present time amounts to 7·3 ins.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follows:—

Direction of Wind.	JANUARY.			FEBRUARY.			MARCH.		
	Average.	1875.	Departure from Average.	Average.	1875.	Departure from Average.	Average.	1875.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	1½	2	+ ½	2	2	0	2¾	4	+1¼
N.	3	0	−3	3	3	0	3¾	4	+ ¼
N.E.	3¼	1	−2¼	3½	6	+2½	4	8	+4
E.	¾	0	− ¾	2¼	5	+2¾	2½	7	+4½
S.E.	2¼	2	− ¼	1¼	3	+1¾	2¼	2	− ¼
S.	4¼	7	+2¾	3	3	0	2½	2	− ½
S.W.	9¾	13	+3¼	8	3	−5	7¾	2	−5¾
W.	3½	6	+2½	2½	3	+ ½	3¼	2	−1¼
Calm, nearly.	2¾	0	−2¾	2½	0	−2½	2¼	0	−2¼

The + signs denote excesses over averages; in the month of January the numbers affected with this sign are opposite to the S., S.W., and W. winds, and these were the dominant winds during this month; in the month of February and March, the + signs are exclusively opposite to E. or N. and their compounds, thus showing the prevalence, particularly in March, of these winds.

The − signs denote deficiency below averages; in January this sign is opposite to the N.E. and N. winds, and in both February and March are opposite to the S. and W. winds, thus January in all particulars was the opposite of both February and March.

NOTE.—In reading this table it will be borne in mind that the minus sign (−) signifies below the average, and that the plus sign (+) signifies above the average.

Thunderstorms occurred, on the 17th of January at Leicester, Royston, and Liverpool; on the 19th at Helston; on the 20th at Guernsey, Salisbury, Halifax, Leeds, Cockermouth, Silloth, and Carlisle; on the 21st at Osborne; on the 23rd at Guernsey and Helston; on the 24th at Guernsey, Helston, Truro, Osborne, and Hastings; and on the 25th at Marlborough, Streatley, and Oxford. On the 25th of February at Osborne.

Thunder was heard, but lightning was not seen, on 20th of January at Strathfield Turgiss; on the 24th at Oxford; and on the 26th at Carlisle. On the 27th of March at Royston.

Lightning was seen, but thunder was not heard, on the 20th of January at Portsmouth, Hastings, Liverpool, and Halifax; on the 21st at Hastings; on the 22nd at Cardington; on the 24th at Portsmouth, Salisbury, Strathfield Turgiss, Weybridge Heath, Marlborough, Blackheath, Streatley, Gloucester, Cardington, Somerleyton, and Wisbech; and on the 25th at Portsmouth, Taunton, Strathfield Turgiss, and Gloucester. On the 16th of February at Hull; and on the 25th at Portsmouth.

Solar halos were seen on the 14th of January at Halifax and Hull; on the 17th and 19th at Halifax; on the 20th at Hastings; on the 22nd at Hull; on the 26th at Calcethorpe; on the 29th at Halifax; and on the 30th at Calcethorpe. On the 2nd of February at Strathfield Turgiss and Oxford; on the 3rd at Halifax; on the 16th at Calcethorpe and Halifax; and on the 26th at Strathfield Turgiss and Wisbech. On the 10th of March at Halifax; on the 14th at Hastings; on the 15th at Wisbech; on the 19th at Oxford; on the 23rd at Wisbech; and on the 25th at Calcethorpe and Hull.

Lunar halos were seen on the 13th of January at Hastings; on the 14th at Calcethorpe; on the 15th at Oxford; on the 17th at Wisbech; on the 18th at Silloth and North Shields; on the 20th at Leicester, Oxford, Wisbech, and Calcethorpe; on the 22nd at Portsmouth, Oxford, Wisbech, Calcethorpe, Eccles, and North Shields; and on the 23rd at Silloth. On the 12th of February at Wisbech; on the 15th at Eccles, Halifax, Silloth, and North Shields; and on the 16th at Oxford and Halifax. On the 14th of March at Hastings and Salisbury, on the 15th at Hastings; on the 18th at Hastings, Salisbury, Weybridge Heath, and Oxford; on the 20th at Halifax and Stonyhurst; on the 23rd at Weybridge Heath; and on the 24th at Oxford.

Auroræ boreales were seen on the 4th of March at Cardington.

Snow fell on the 1st of January at Guernsey, Salisbury, Strathfield Turgiss, Marlborough, Oxford, Gloucester, Calcethorpe, Hawarden, Eccles, Halifax, Stonyhurst, Bradford, Cockermouth, and North Shields; on the 20th at Allenheads; on the 21st at Strathfield Turgiss, Marlborough, Halifax, Stonyhurst, Allenheads, Silloth, Bywell, and North Shields; on the 22nd at Calcethorpe, Eccles, Hull, Stonyhurst, Allenheads, Bywell, and North Shields; on the 23rd at Hawarden, Liverpool, Halifax, Bradford, Allenheads, and North Shields; on the 24th at Allenheads; on the 25th at Halifax, Stonyhurst, and North Shields; on the 26th at Eccles, Halifax, Stonyhurst, Allenheads, Silloth, Bywell, and North Shields; and on the 29th at Allenheads. On the 3rd of February at Halifax; on the 4th at Somerleyton and Calcethorpe; on the 6th at Halifax and Stonyhurst; from the 7th to the 11th generally; and from the 18th of February to the 18th of March, with the exception of 3 days it fell very generally over the whole country. On the 20th of March at Hastings, Royston, and Somerleyton; on the 21st at Hastings and Stonyhurst; on the 26th at Allenheads; on the 27th at Calcethorpe and Allenheads; on the 28th at Hastings, Royston, Hull, Allenheads, and North Shields.

Hail fell on the 1st of January at Guernsey, Portsmouth, Gloucester, and Eccles; on the 2nd and 4th at Oxford; on the 17th at Leicester and Liverpool; on the 19th at Helston; on the 20th at Guernsey, Hastings, Salisbury, Cockermouth, Silloth, and Carlisle; on the 22nd at Streatley, Hawarden, Liverpool, and Eccles; on the 23rd at Guernsey and Helston; on the 24th at Guernsey, Helston, Truro, Portsmouth, Leicester, Royston, Hawarden, and Cockermouth; and on the 25th at Portsmouth and Marlborough. On the 3rd of February at Halifax; on the 8th and 9th at Taunton; on the 10th and 11th at Hastings; on the 17th at Guernsey, Cardington, and Hull; on the 18th at Guernsey, Hastings, Taunton, Salisbury, Aldershot Camp, Marlborough, Blackheath, Oxford, Gloucester, Royston, Norwich, Wisbech, Calcethorpe, Hull, and North Shields; on the 19th at Guernsey, Hastings, Taunton, Salisbury, Somerleyton, and Hull; on the 20th at Taunton and Salisbury; on the 21st at Guernsey; on the 24th at Guernsey, Taunton, and Hull; on the 25th at Osborne and Taunton; on the 26th at Truro; on the 27th at Guernsey; and on the 28th at Hull. On the 1st of March at Guernsey, Somerleyton, and Hull; on the 2nd at Guernsey; on the 7th at Allenheads; on the 11th at Calcethorpe; on the 12th at Eccles, Hull, and Bywell; on the 13th and 16th at Guernsey; on the 17th at Cardington; on the 18th at Oxford, Halifax, Hull, and Bywell; on the 20th at Wisbech, Calcethorpe, and Hull; on the 26th at Allenheads; on the 27th at Weybridge Heath, Streatley, Halifax, Hull, Cockermouth, Bywell, and North Shields; and on the 28th at Somerleyton.

Fog prevailed at one or other station on 17 days in January, viz., 1st, 3rd, 4th, 5th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 16th, 23rd, 26th, and 27th. On 19 days in February, viz., 1st, 2nd, 3rd, 5th, 6th, 7th, 8th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 18th, 19th, 22nd, 23rd, and 25th. And in March on 10 days, viz., 3rd, 4th, 5th, 10th, 12th, 15th, 16th, 19th, 24th, and 31st.

Leaf buds first appeared on the Sycamore on the 22nd of January at Llandudno; and on the 27th at Portsmouth. On the 12th of March at Strathfield Turgiss; on the 20th at Guernsey; and on the 28th at Carlisle.

Leaf buds first appeared on the Horsechestnut on the 18th of February at Portsmouth. On the 8th of March at Helston; on the 25th at Guernsey; and on the 29th at Strathfield Turgiss.

Leaf buds first appeared on the Common Poplar on the 27th of January at Portsmouth.

Leaf buds first appeared on the Hawthorne on the 20th of March at Carlisle. (*In leaf*), on the 8th of March at Helston; and on the 31st at Guernsey.

Leaf buds first appeared on the Hazel on the 4th of March at Helston.

Leaf buds first appeared on the Walnut on the 18th of February at Portsmouth.

Pear in blossom on the 22nd of March at Helston.

Peach in blossom on the 10th of March at Helston; on the 27th at Oxford; on the 29th at Guernsey; and on the 30th at Wisbech.

Plum in blossom on the 30th of March at Guernsey and Strathfield Turgiss.

Apricot in blossom on the 14th of March at Wisbech.

Woodcock last seen at Strathfield Turgiss on the 20th of February.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING MARCH 31ST, 1875.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

Names of Stations and Observers.	Height of Station above Sea Level.	Year 1875. Months.	Pressure of Atmosphere in Month. Mean.	Pressure of Atmosphere in Month. Range.	Temperature of Air in Month. NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	Wind. Relative Proportion of E.	Wind. Relative Proportion of S.	Wind. Relative Proportion of W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Number of Days on which it fell.	Rain. Amount collected.

The highest temperatures of the air were at Helston, 64°·0; and Llandudno, 61°·8.

The lowest temperatures of the air were at Calcethorpe, 7°·0; and Royston, 8°·7.

The greatest daily ranges of the temperatures of the air were at Salisbury, 15°·3; and Lampeter, 13°·5.

The least daily ranges of the temperatures of the air were at Guernsey, 7°·6; and Bermerside Observatory, 7°·8.

The greatest numbers of rainy days were at Nottingham, 63; and Stonyhurst, 61.

The least numbers of rainy days were at Taunton, 34; and Bournemouth and Aldershot Camp, 36.

The heaviest falls of rain were at Truro, 11·82 inches; and Helston, 10·47 inches.

The least falls of rain were at Royston, 3·31 inches; and Somerleyton, 3·52 inches.

Quarterly Meteorological Table for different Parallels of Latitude.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	Wind. Relative Proportion of E.	Wind. Relative Proportion of S.	Wind. Relative Proportion of W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Mean Number of Days it fell.	Rain. Mean Amount collected.

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each SUPERINTENDENT REGISTRAR'S DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

Aberayron, 600.
Abergavenny, 579.
Aberystwith, 601.
Abingdon, 114.
Alcester, 398.
Alderbury (Salisbury), 254.
Alnwick, 560.
Alresford, 104.
Alston, 565.
Alton, 105.
Altrincham, 447.
Alverstoke, 88.
Amersham, 139.
Amesbury, 253.
Ampthill, 172.
Andover, 109.
Anglesey, 627.
Ashborne, 440.
Ashby-de-la-Zouch, 407.
Ashton-under-Lyne, 468.
Aston, 388.
Atcham (Shrewsbury), 351.
Atherstone, 390.
Auckland, 543.
Axbridge, 315.
Axminster, 269.
Aylesbury, 142.
Aylsham, 223.
Aysgarth, 537.

Bakewell, 442.
Bala, 620.
Banbury, 154.
Bangor, 625.
Barnet, 127.
Barnsley, 505.
Barnstaple, 285.
Barrow-upon-Soar, 409.
Barton-upon-Irwell, 464.
Basford, 431.
Basingstoke, 107.
Bath, 317.
Battle, 68.
Beaminster, 267.
Bedale, 535.
Bedford, 170.
Bedminster, 319.
Bedwelty, 580.
Belford, 561.
Bellingham, 558.
Belper, 439.
Berkhampstead, 138.
Berwick, 562.
Bethnal Green, 15.
Beverley, 518.
Bicester, 150.
Bideford, 287.
Biggleswade, 171.
Billericay, 190.
Billesdon, 408.
Bingham, 436.
Birkenhead, 454.
Birmingham, 387.
Bishop Stortford, 130.
Blaby, 404.
Blackburn, 474.
Blandford, 260.
Blean, 57.
Blofield, 228.
Blything, 216.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 106.] **Marriages**—*January, February, March*, 1875. **Births** and **Deaths**—*April, May, June*, 1875. [Price 9*d.*

General Register Office, Somerset House, 2nd August 1875.

In the UNITED KINGDOM the *births* of 284,356 children, and the *deaths* of 175,689 persons of both sexes, were registered in the three months ending 30th *June* 1875. The natural recorded increase of population was thus 108,667.

The registered number of persons married in the quarter ending 31st *March* 1875 was 114,258.

The resident population of the United Kingdom in the middle of 1875 is estimated at 32,737,405; that of England and Wales at 23,944,459, of Scotland at 3,495,214, and of Ireland at 5,297,732. The birth-rate in the United Kingdom in the *second* quarter of 1875 was 34·8 per 1000, and the death-rate 21·5. The marriage-rate in the *first* quarter of 1875 was 14·2 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Reports of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2194 Registrars in all the districts of England during the quarter ending 30th June 1875; and the MARRIAGES in 13,597 churches or chapels, in 7423 registered places of worship unconnected with the Established Church, and in 629 Superintendent Registrars' Offices, in the three months ending 31st March 1875.

The marriages rose in the first quarter of the year above the average of the winter season, and implied improved prospects on the part of great numbers of the people. In the second quarter of the year that ended in June the birth-rate was below the average. The season was colder in April, warmer in May, and at the average temperature in June; the rain-fall was below the average. Small-pox was fatal to few, and measles was not exceptionally prevalent; scarlet fever and whooping-cough were the reigning epidemics. Fever was stationary: other affections raised the mortality slightly above the average.

Marriages.

During the first three months of this year 84,474 persons married; equal to an annual rate of 14·3 per 1000 of the estimated population. The average marriage-rate in the corresponding quarter of the ten years 1865–74 was 13·8. The rate in the first quarter of this year, therefore, exceeded the average in recent corresponding quarters, and was higher than in the first three months of any year since 1864, except in 1866 and 1873, when the rate corresponded with that which prevailed in the quarter now under notice. The marriage-rate during the three months ending 31st March last ranged from 9·3 and 10·3 in the agricultural counties of the South Midland and Eastern registration Divisions, to 16·6 and 17·7 in the mining and manufacturing population of the Northern and North-western Divisions. The marriage-rate was so low as 7·1 per 1000 in Westmorland and 7·7 in Cambridgeshire, whereas it was equal to 18·2 in Lancashire and

18·8 in Northumberland. The marriages in England and Wales in the first three months of this year exceeded by 2·9 per cent. the average number in the corresponding quarter of the three preceding years; they were, however, considerably below this average in the South-western, West Midland, and Welsh Divisions. In Monmouthshire and South Wales the 1715 marriages in the first three months of this year showed a decline of 488 from those returned in the same period of 1874, and were 14 per cent. below the average number in the corresponding quarter of the three years 1872–3–4; the decline in the marriage-rate in this part of the kingdom may be attributed to the late extensive strike and lock-out in the coal and iron trade of the district.

Births.

During the second or spring quarter of this year ending 30th June last 214,650 births were registered, the annual rate being equal to 36·0 per 1000; this rate was 0·9 per 1000 below that in the corresponding quarter of last year, and 0·2 below the average rate in the second quarters of the ten years 1865–74. The experience of the first six months of compulsory registration of births in England shows no appreciable effect upon the birth-rate, although it has been estimated that during the ten years 1861–70 the average annual number of births that escaped registration was 13,614. Indeed the births registered in England and Wales during the six months ending 30th June last were actually less by 2141 than the number returned in the corresponding period of 1874, when the population of the country was undoubtedly less than it now is.

It cannot be too generally known that the new Registration Act, which came into operation on the 1st January last entails the duty upon all parents (the neglect of which renders them liable to a penalty) to attend at the office or station of the local registrar, and give personal information respecting the births of their children within 42 days; or to send a notice to the registrar to attend at the house of the informant, when the registrar will be entitled to a fee of one shilling for registering the birth. Under this new Act the period during which registration of births can be effected at the registrar's office without the payment of a fee, is extended from six weeks to three months. On the payment of a fee by the informant, births which remain unregistered at the end of three months, may be entered upon the register by the registrar, in the presence of the Superintendent Registrar, until the end of twelve months from the date of the birth. How far these provisions for late registration will disturb the proportions between the numbers of births actually occurring, and those registered in each quarter, can only be ascertained by an inquiry whether the average period between births and their registration actually increases now that the new Act has come into operation.

The annual birth-rate in the second quarter of this year, which as before stated averaged 36·0 in England and Wales, was but 29·5 and 30·0 in the principally agricultural population of the South-western and South-eastern registration Divisions, whereas it was 39·8 and 43·8 in the manufacturing and mining population of the North-western and Northern Divisions. The birth-rates in the several counties (excluding Rutland) ranged from 27·8 and 28·2 in Herefordshire and Sussex, to 42·1 and 48·7 in Staffordshire and Durham.

In the eighteen large English towns furnishing weekly returns the birth-rate last quarter averaged 37·3 per 1000, against 37·6 in the corresponding quarter of last year, and exceeded by 1·3 per 1000 the average rate in all England; in the several towns it ranged from 32·8 in Portsmouth and in Norwich, to 43·5 in Sunderland and in Oldham, and 45·8 in Salford. In fifty other large towns the birth-rate averaged 36·5 per 1000, and was 0·8 below the rate in the eighteen largest towns; in Cheltenham the birth-rate was so low as 21·7, and it was but 25·5 in Exeter and in Bath, whereas it was as high as 46·8 in Wigan and 47·2 in Gateshead. The estimate of the present population of Wigan has been revised upon the basis of local information as to the increase of inhabited houses since 1871.

Movement of the Population.

The births registered during the three months ending 30th June last exceeded the registered deaths in the same period by 83,853, whereas the excess of births

over deaths in England and Wales during the same period of 1874 was 93,615. The decline in the natural increase of the population was due partly to the decrease of the births and partly to the increase of the deaths.

The increase of the population due to the excess of births over deaths is affected both by immigration and emigration. The means for arriving even at an approximate estimate of the extent of immigration from other portions of the United Kingdom, and from abroad, are now imperfect; returns published by the Board of Trade, however, afford reliable indications of the rate and extent of emigration. It appears that during the second quarter of this year 65,473 emigrants sailed from the various ports of the United Kingdom at which emigration officers are stationed. After distributing proportionately 560 whose nationality was undistinguished, and excluding 14,295 foreigners, the emigrants of British origin were 51,178, including 25,939 English, 5225 Scotch, and 20,014 Irish. Compared with the numbers returned in the corresponding quarter of 1874, the British emigrants who sailed last quarter showed a decline of 34 per cent.; and those in 1874 were 25 per cent. less than the number in the same period of 1873. The proportions of British emigrants last quarter to a million of the populations of the three portions of the United Kingdom were 1083 in England, 1495 in Scotland, and 3778 in Ireland. The decline of emigration in Ireland was more remarkable than in either England or Scotland; the number of Irish emigrants who sailed were less by 47 per cent. than the average number in the corresponding quarters of the five years 1870–74. So few emigrants have not left the shores of the United Kingdom in the June quarter of any year since 1862. The destination of 71 per cent. of the emigrants was the United States, while 14 per cent. left for the Australian colonies, 13 per cent. for British North America, and only 2 per cent. for all other places.

Prices, Pauperism, and Meteorology.

The average price of wheat in the second quarter of this year was 42*s.* 6*d.*, and corresponded with that which prevailed in the preceding three months; in the corresponding quarters of 1873 and 1874 the average price was 56*s.* 5*d.* and 61*s.* 1*d.* respectively. The average price during the first six months of this year was lower than in any quarter since March 1870, when it was 42*s.* 3*d.* The mean price of the best potatoes which in the spring quarters of 1873 and 1874 had been 212*s.* 6*d.* and 150*s.*, did not exceed 100*s.* 6*d.* during the quarter now under notice. The price of meat on the other hand showed a marked increase. During the four quarters ending 31st March last the wholesale mean price of beef and mutton, by the carcase, at the Metropolitan Meat Market was almost stationary at 6½*d.* per lb. Prices, especially of mutton, rose rapidly during May and June, and the mean during the quarter was 6¾*d.* for beef and 7½*d.* for mutton, showing an increase of a farthing and a penny a pound, respectively, upon the average prices in the preceding three months. The average price per ton of the best sea-borne coal in the London Market, put in barge from the collier in the Thames, was 20*s.* 8*d.*, against 21*s.* 7*d.*, 29*s.* 3*d.*, and 23*s.* 7*d.* in the three preceding corresponding quarters. The average price of consols during the quarter was 93*l.* 15*s.*, an increase of a pound upon the average price in the first quarter of the year, and was higher than in any quarter since June 1870. The average minimum rate of discount charged by the Bank of England during the three months was 3*l.* 10*s.* 0*d.* showing a further decline from the average rate charged in the two preceding quarters.

The average number of paupers relieved on the last day of each week during the quarter, derived from returns furnished by the Local Government Board, was 725,114, of which 131,773 received in-door, and 593,341 out-door relief. The number of in-door paupers was less by 1·6 per cent. than that in the corresponding period of 1874, while the decline in the number of out-door paupers was equal to 3·5 per cent. In the June quarter of 1870, the average number of out-door paupers was 826,396, since which the average numbers have steadily declined. The number in the June quarter of this year was 28 per cent. less than that in 1870, above referred to.

The remarks upon the meteorology of the quarter, at the Royal Observatory, Greenwich, and the accompanying tables, furnished by Mr. Glaisher, F.R.S., will be found on pp. 65–72. The temperature during April was remarkably changeable,

and averaged 46°·3, or 0°·9 below the average in the corresponding period of 34 years. During May the weather was unusually warm, the mean temperature being equal to 55°·0 and exceeding the average by 2°·2. The first ten days in June were also warm, after which the mean temperature was continually below the average until the end of the quarter. From the 11th to the 30th June the mean daily temperature was nearly 3° below the average. The mean temperature for the quarter was 53°·4, and exceeded by 1°·1 the average for the same period in 104 years. In the other large towns furnishing returns the mean for the quarter ranged from 51°·4 and 51°·7 in Hull and Salford, to 53°·1 in Sunderland, and 53°·6 in Leicester.

The fall of rain during the quarter at Greenwich was 5·4 inches, and nearly half an inch below the average of the corresponding period in 60 years. The amounts measured in the three months were respectively 1·6 inches in April, 1·5 in May, and 2·3 in June; the amounts measured in April and May were below the average, while that in June was slightly excessive. The average rain-fall at the various stations of observation between latitude 50° and 55° was 5·9 inches; between 52° and 53° the fall average 5·4 inches, while it was 6·3 inches between 51° and 52°. The measured rain-fall in the several large English towns ranged from 4·1 inches in Norwich and Hull, to 10·1 inches in Bristol.

State of the Public Health; Deaths.

During the three months ending 30th June last, 130,797 deaths were registered in England and Wales. The annual death-rate during this period was equal to 21·9 per 1000 of the estimated population, which exceeded by 0·5 the average rate in the corresponding quarter of the ten preceding years 1865–74. The death-rate last quarter was higher than in the Spring quarter of any year since 1866, when it was equal to 24·2. The alternations of temperature during April were unusually severe, and the weather during the greater part of June was unseasonably cold. These meteorological conditions appear to have been especially unfavourable to the health of infants and elderly persons. The death-rate at all ages exceeded by 0·9 per 1000 the average rate in the second quarter of the five years 1870–4, whereas among persons aged 60 years and upwards the excess in the death-rate was equal to 6·2 per 1000. As regards the causes of death, it is satisfactory to find that the death-rate from the seven principal diseases showed a marked decline from the average rate in the same period of the preceding five years. It follows, therefore, that a large increase of deaths must have occurred in some of the other classes of disease. A complete examination of the causes of death during last quarter in the whole of England and Wales is not, however, yet possible, although judging from the figures for London published in the Weekly Return, it may be safely assumed that the excess was in great measure due to the exceptional fatality of diseases of the respiratory organs. In London, for instance, the deaths from all causes last quarter only exceeded by 1·1 per cent. the corrected average number in the corresponding quarter of the last ten years, whereas those referred to diseases of the respiratory organs showed an increase of 22 per cent.

The annual death-rate last quarter from all causes in England and Wales averaged, as before stated, 21·9 per 1000. In the eleven registration divisions the death-rate ranged from 18·6 and 19·8 in the principally agricultural counties of the South-eastern and South-midland, to 23·7 and 24·6 in the manufacturing counties of the York and North-western Divisions. The death-rates in counties (excluding Rutlandshire, where it was so low as 14·3), ranged from 16·8 and 18·1, in the extra-metropolitan portions of Surrey and Middlesex, to 24·3 in the East Riding of Yorkshire, and 25·1 in Lancashire.

In the principal urban population of England and Wales, estimated at more than thirteen and a half millions of persons, the death-rate last quarter averaged 22·7 per 1000, whereas in the remaining or rural population of about ten millions it did not exceed 20·8 per 1000. The urban rate was 0·2 below, while the rural rate exceeded by 1·4 per 1000 the average rates in the same divisions of the population in the ten preceding corresponding quarters. The decline in the fatality of zymotic diseases favourably affected the urban death-rates, and the effect of the inclemency of the past spring upon the public health, more especially upon the death-rate of elderly persons, appears to have been far more severely felt in rural than in urban

populations. A similar result was observed from the severe cold which prevailed during the first three months of the year.

In eighteen of the largest English towns, including London, having an estimated population of more than six and a half millions, the death-rate last quarter averaged 23·2 per 1000, exceeding by 0·5 the general urban rate. In the several towns the rate ranged from 17·3 in Portsmouth and 21·2 in Wolverhampton and Sunderland, to 28·1 and 30·3 in Manchester and Oldham. The rates of mortality at different groups of ages and from various diseases, are useful as affording evidence of the causes which produce these with variations in the general death-rates. Infant mortality per 1000, which was equal to 111 in Portsmouth and 137 in Salford and Sheffield, was 182 in Leicester, and 191 in Norwich. The annual death-rate among persons aged between 1 and 60 years, ranged from 10·3 and 11·0 in Portsmouth and Sunderland, to 18·7 and 19·0 in Oldham and Manchester. Among persons aged upwards of 60 years, the death-rate was equal to 58·9 and 68·4 in Leicester and Norwich, and to 107·9 and 124·9 in Oldham and Liverpool. The death-rate from the principal zymotic diseases which did not exceed 1·4 and 2·1 in Portsmouth and Newcastle-upon-Tyne, ranged upwards to 4·5 in Norwich and Salford, and 5·8 in Hull. In fifty other large towns the death-rate last quarter averaged 22·1 per 1000, and was 1·1 below the rate in the eighteen towns. The lowest rates were 14·6 in Dover, 17·1 in Devonport, 17·4 in Colchester, 17·5 in Yarmouth, and 17·8 in Brighton. The following were the highest rates:—Rochdale 28·3, Stockport 28·5, Wigan 28·5, and Preston 28·8. The zymotic rate was but 0·2 per 1000 in Ipswich, and 0·5 in Dover and Cheltenham; whereas it was 4·7 in Northampton and Carlisle, 5·2 in Rochdale, 5·3 in Birkenhead, and 5·4 in Wigan. This high zymotic rate was principally caused by measles in Northampton and Carlisle, by scarlet fever in Birkenhead, and by scarlet fever and small-pox in Rochdale.

The 130,797 deaths at all ages included 29,839 of infants under one year of age; 67,847 of children and adults aged between 1 and 60 years, and 33,111 of persons aged 60 years and upwards. The annual rate of mortality among infants (measured by the proportion of deaths under one year to births) was equal to 139 per 1000; between 1 and 60, it was 12·7 to 1000 living at that age, and among persons aged upwards of 60 years 74·2. Compared with the average rates in the corresponding quarters of the five years 1870–4 those last quarter showed an excess of 7 per 1000 under one year of age, and 6 per 1000 at 60 and upwards, while among persons aged between 1 and 60 years, it was almost identical with the average. It appears therefore that the excessive death-rate last quarter was entirely confined to infants and elderly people.

The rate of infant mortality which as before stated averaged 139 per 1000 in England and Wales, ranged from 114 and 122 in the South-eastern and South-western, to 148 in the West Midland registration Divisions. In the several counties it was but 94 in Westmorland and 103 both in the extra-metropolitan portion of Surrey and in Devonshire, whereas it was as high as 161 in Staffordshire and 165 in Nottinghamshire. It has previously been noted that this infantile death-rate in the large towns ranged upwards to 182 in Leicester and 191 in Norwich.

Among persons aged upwards of 60 years, the annual death-rate last quarter, which averaged 74·2 in England and Wales, varied between 70·7 in the South-eastern and 82·7 in the North-western registration Divisions. In the several counties this death-rate among elderly persons was 67·1 in Sussex and 69·8 in Wiltshire, while it was equal to 83·0 in Lancashire and 85·0 in Hertfordshire. In consequence of the excessive death-rate which prevailed last quarter, nearly 3000 persons aged upwards of 60 years died in England and Wales, who would have survived had the death-rate at these ages not exceeded the average rate in the five preceding corresponding quarters.

To the seven principal zymotic diseases 15,419 deaths were referred in England and Wales during the second or spring quarter of this year, of which 4063 resulted from scarlet fever, 3640 from whooping-cough, 2728 from different forms of fever, 2463 from diarrhœa, 1432 from measles, and 348 from small-pox. These zymotic deaths were equal to an annual rate of 2·6 per 1000, against 3·1 the average rate in the five preceding corresponding quarters. In the principally agricultural population of the South-eastern and South-western registration Divisions the zymotic rate did not exceed 1·6 per 1000, whereas it was 3·0 in the Northern, 3·2 in the London

and the North-western, and 3·4 in the York registration Divisions. In Suffolk and Hertfordshire the zymotic rate was so low as 1·2 per 1000; while it was 3·3 in the West Riding, 3·4 in Nottinghamshire and 4·5 in the East Riding. As before stated the zymotic rate averaged 3·3 in the eighteen largest town, whereas in the fifty smaller towns it did not exceed 2·5 per 1000.

The 4063 fatal cases of scarlet fever showed a further decline upon the numbers returned in the two preceding quarters, when they were 8562 and 5050 respectively; they were equal to an annual rate of 0·68 per 1000 against 0·89 in the ten years 1860–9. The scarlet fever rate was not more than 0·29 in the South Midland, whereas it was 1·00 in the North Midland and 1·35 in the York registration Divisions. Oxfordshire and Sussex were especially free from the prevalence of scarlet fever, whereas the fatality was greatest in the East Riding of Yorkshire. Among those places in which the fatality from scarlet fever was exceptionally severe during the spring quarter of this year may be mentioned Tiverton, Redruth, Yeovil and Martock, Crewe, Birkenhead, Clitheroe, Skipton, Keighley, Goole and Swinefleet, Patrington, Cockermouth, Cowbridge, Neath, Holywell, Flint, Festiniog, and Carnarvon. The annual death-rate from scarlet fever in the above-mentioned towns ranged from about 4 per 1000, to 10 in Cowbridge, Flint, and Festiniog. In many small villages and rural parishes the fatality of scarlet fever measured by its proportion to population was considerably more severe; the parishes of Great Limber near Caistor in Lincolnshire, and Syresham near Brackley in Northamptonshire may be mentioned as examples of this rural fatality, the annual death-rate from the disease during last quarter exceeding 50 and 30 per 1000 respectively. Judged by the fatal cases of scarlet fever returned week by week in eighteen of the largest English towns, the epidemic which had steadily declined from the beginning of the year until nearly the end of May showed increased intensity throughout the remainder of the quarter, which increase has been maintained during July. This increased fatality was especially marked in London.

The 745 deaths from diphtheria, as well as the fatal cases of scarlet fever, showed a further decline from the numbers returned in the two preceding quarters. In proportion to population the numbers were excessive in Sandwich, Hailsham, and Swinefleet near Goole.

The 3640 deaths referred to whooping-cough showed a decline of 425 from the exceptionally high number returned in the preceding quarter, but exceeded by 1080 that in the spring quarter of 1874. The distribution of the fatality of this disease was general; it may be remarked, however, that it was far greater in London than in any of the registration Divisions, and was also excessive in Norwich, Birmingham, Wigan, Sunderland, and South Shields.

The fatal cases of measles, which were 3801 in the first quarter of 1874, have since steadily declined till last quarter when but 1432 were returned, which were equal to an annual rate of 0·24 per 1000, whereas in the 20 years 1850–69 it averaged 0·44. An examination of the sub-district returns discloses, however, many local outbreaks of measles, among which may be mentioned those at Northfleet, Folkestone, Alverstoke, Northampton, the Royal Victoria Hospital at Netley, Longton, Glossop, Hyde, Middlewich, and Carlisle.

The death-rate from fever continues to decline. During the 20 years 1850–69 the average annual rate from fever, including typhus, typhoid, and simple continued fevers, was 0·92 per 1000; while in 1873 and 1874 it was only equal to 0·56. The fever rate during the quarter now under notice was 0·46, a lower rate than in any quarter since the end of 1869, previous to which causes of death were not published in the Quarterly Returns. In the eleven registration Divisions the fever rate last quarter ranged from 0·32 in the agricultural counties of the West of England, to 0·64 in the manufacturing population of the North Western Division; in the North Riding of Yorkshire the rate did not exceed 0·26, whereas it was equal to 0·65 in Lancashire and the East Riding of Yorkshire, and to 0·70 in Durham. The returns from the local registrars show an excessive fatality from fever in the following places:—Dorking, Croydon, Ardley parish (Oxon), Ramsey (Hunts), Chatteris, Chippenham, Marshfield, Overton (Salop), and Owston (Lincolnshire). The annual death-rate from fever last quarter averaged 0·46 in eighteen of the largest towns; it ranged from 0·23 and 0·26 in Sunderland and Nottingham to 0·88 and 0·96 in Sheffield and Liverpool respectively.

The 338 deaths referred to small-pox in England and Wales last quarter showed but a slight excess upon the low number returned in the first three months of the year; of these 73 occurred in Birmingham, 44 in Keighley, 32 in Bristol, 20 in Darlington, 16 in Stockport, 12 in the registration district of Dewsbury, and 11 in Liverpool. No fatal case of small-pox was returned in any of the counties of the Eastern Division, nor in Devonshire, Dorsetshire, Wiltshire or Shropshire; and only one in the five counties of the North Midland Division. The outbreak of small-pox in Keighley again resulted last quarter, in a higher rate of mortality from this disease than in any other part of England and Wales. The epidemic in this town is remarkable for its intensity among the unvaccinated, and has been conspicuous for the unenviable notoriety which the Keighley guardians have earned by their wilful persistence in refusing to fulfil the duty, imposed upon them by the compulsory Vaccination Act, to prosecute those who neglect to comply with its provisions.

In workhouse establishments, hospitals, and public lunatic asylums 11,989 deaths were registered last quarter, equal to 9·2 per cent. of the total deaths; in the corresponding quarter of each of the two previous years the proportion of institution deaths was 9·5 and 8·8 per cent. Nearly half the 11,989 deaths in institutions, namely 5819, were recorded in those of the eighteen largest towns where the per-centage of deaths in institutions to total deaths was 15·1; in the remainder of England and Wales this per-centage was only 6·7. In the several large towns it ranged from 5·8 in Oldham to 18·2 in London.

To different forms of violence 4425 deaths were referred in England and Wales, equal to an annual rate of 0·7 per 1000 persons estimated to be living; in the agricultural counties of the Eastern Division the death-rate from violence was only 0·4 per 1000, whereas among the manufacturing and mining populations of the North Western and Northern Divisions it was equal to 0·9 per 1000. In the eighteen large English towns the death-rate from violence averaged 0·9 per 1000, and ranged from 0·2 in Portsmouth, to 1·2 both in Birmingham and in Liverpool.

During the three months 6655 deaths, or 5·1 per cent. were registered upon the information of the coroner, being inquest cases; the average proportion of inquest cases to total deaths in England and Wales during the three years 1872–4 was 5·2 per cent. In the eighteen towns inquests were held on 6·5 per cent. of the deaths registered last quarter, the proportion varying in the several towns from 3·3 and 3·4 in Sheffield and Portsmouth, to 9·3 and 9·4 per cent. in Manchester and Birmingham.

Health of Foreign Cities.

A summary of the vital statistics of 21 of the Foreign Cities which favour the Registrar-General with weekly returns will be found in Table XII. The population of these 21 cities consists of about eight and a half millions of persons, and the death-rate therein during the second quarter of this year averaged 29·8 per 1000; in the several towns the rates ranged from 20·1 and 23·1 in Christiania and Brooklyn, to 43·6 in Alexandria, and 44·7 in Buda-Pesth. Small-pox was fatally prevalent in Calcutta, Vienna, Buda-Pesth, and New York; typhus in Berlin, Munich, and Naples; and diphtheria in Berlin, New York, and Brooklyn.

Watering Places and Health Resorts.

There is a general movement in summer from populous cities to watering places, healthy resorts, and foreign parts, all varying more or less in salubrity owing to sanitary arrangements and epidemic vicissitudes. About foreign watering places we have no information; but it is deemed desirable to furnish as full accounts as are possible respecting those in England, which it is believed, excel or certainly do not fall below the majority of their continental competitors. The following Table of mortalities has been drawn up in continuation of the tables of previous years.

Some difficulties are experienced which it is right to notice. The mortality is determined, as is well known, by the ratio of the deaths to the population of a district. But the population of some of these places fluctuates; at one season of the year they are full of visitors, at another empty, to employ the technical terms in use. In some places the visitors are suffering from fatal diseases; in others they are all in health on leaving home for an excursion. The sick poor are sometimes sent away to workhouses and hospitals, where they die. Then the registration sub-

districts, although taken as nearly as is practicable to agree, rarely coincide in area with the particular quarters occupied by lodging houses.

As however these disturbances often neutralize each other the mere facts as here published are useful guides with others to aid inquirers in their endeavours to place their families for a season in healthy localities.

The indication of the absence, or of the prevalence of scarlet fever, or of any other fever, will always merit attention. And it may here be right to add that it has generally happened hitherto that the watering places where the mortality appears to be in these Tables low,—that is the majority—have been exceedingly well satisfied with the method and the results ; while the greatest dissatisfaction has been expressed in letters to the public journals, by persons interested in places where the mortality is high, and epidemics prevail. The inquirer will do well neither to accept the place on the scale of mortality for an explicit guide, nor to be misled by exaggerated statements of persons unintentionally biassed.

In the following table the various places are arranged according to the rates of mortality prevailing in the three months of April, May, and June. The deaths from some of the zymotic diseases are indicated in the notes.

The annual rate of mortality of England for the season was 21·9 per 1000, and with this standard the rates here given may be compared.

It is right to add that the districts containing the English watering places are under the charge of medical health officers ; and that the authorities in some of them, such as Llandudno, are engaged in carrying out extensive sanitary works.

Districts or **Sub-districts** containing the **principal English Watering Places** ranged in the order of their MORTALITY during the SECOND or SPRING QUARTER of **1875.**

* The details of the deaths which caused a Zymotic rate exceeding 2 per 1,000 in the districts or sub-districts containing the following towns, are:

Eastbourne and Seaford ; 10 deaths were referred to whooping-cough, 4 to fever, 1 to diphtheria, and 1 to measles.

Blackpool and Fleetwood ; 3 deaths were referred to diarrhœa, 2 to fever, 2 to scarlet fever, 2 to whooping-cough, 1 to diphtheria, and 1 to small-pox.

Folkestone ; 15 deaths were referred to measles, 1 to small-pox, 1 to fever, and 1 to diarrhœa.

Whitby ; 11 deaths were referred to whooping-cough, 2 to fever, 1 to diarrhœa, and 1 to diphtheria.

Aberystwith ; 7 deaths were referred to measles.

Southport ; 7 deaths were referred to whooping-cough, 4 to diphtheria, 2 to fever, 2 to diarrhœa, 1 to measles, and 1 to scarlet fever.

Llandudno ; 2 deaths were referred to whooping-cough, 2 to fever, and 2 to diarrhœa.

† The Health Officer states that of the 28 deaths in the town of Llandudno, 9 were of visitors, not one in sound health on arrival.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1865–75,** and in each Quarter of those Years.

* Furnished by the Chief Cashier of the Bank of England.
† As published by the Comptroller of Corn Returns to the Board of Trade.
‡ These are the average prices at which seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

Preston - - - - M† -	86,487	910	620	42·2	28·8	2·2	Preston Sub-district.
IX.—YORKSHIRE.							
Huddersfield - - M† -	78,786	684	505	34·8	25·7	3·6	Almondbury, Kirkheaton, Huddersfield, & Lockwood Sub-dists.
Halifax - - - - M† -	86,496	722	506	33·5	23·5	2·7	Southowram, Halifax, and Northowram Sub-districts.
York - - - - - M† -	58,483	470	295	32·2	20·2	1·6	Bootham, Micklegate, and Walmgate Sub-districts.
X.—NORTHERN COUNTIES.							
South Shields - - M -	93,228	1022	503	44·0	21·6	3·9	Entire District.
Gateshead - - - M† -	56,147	661	298	47·2	21·3	1·9	Gateshead Sub-district.
Tynemouth - - - M† -	43,093	409	245	38·1	22·8	1·8	Nrth. Shields & Tynemouth Sub-ds.
Carlisle - - - - M† -	34,781	285	226	32·9	26·1	4·7	St. Cuthbert & St. Mary Sub-dists.
XI.—MONMOUTHSH. & WALES.							
Newport (Monmouth) M† -	32,362	314	184	38·9	22·8	1·1	Newport Sub-district.
Cardiff - - - - M† -	74,589	750	368	40·3	19·8	2·5	Cardiff Sub-district.
Merthyr Tydfil - - P -	98,576	1059	556	43·1	22·6	2·0	Lower and Upper Merthyr Tydfil and Aberdare Sub-districts.
Swansea - - - M -	74,920	850	487	45·5	26·1	3·6	Swansea and Llangafelach, and Llansamlet (Neath) Sub-dists.

ote.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the column approximately represent, are Municipal or Parliamentary.

For method of framing these estimates see note * to Table VI. As the population of Gosport, Devonport, Coventry, Macclesfield, and ton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The nates of the present population of Dudley and Wigan have been based upon local information as to the increase of the inhabited houses in e two boroughs between 1871 and 1875.

The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County spitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the town, or by the exclusion or tion of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where Workhouse is situate outside that area.

TABLE X.—**Mortality** in **Districts** or **Sub-districts** containing the principal **English Watering Places** during the **Second** or **Spring Quarter** of 1875.

District Number.	Watering Places.	Area in Acres.	Estimated Population in the middle of 1875.	Deaths registered in the Quarter ending 30th June 1875.	Annual Rate of Mortality per 1000 living. In 10 Years 1861–70.*	In Quarter ending 30th June 1875.	From Seven Principal Zymotic Diseases in June Quarter 1875.	Districts and Sub-districts taken as approximately representing the Watering Places.
	37 Seaside Towns -	652,601	763,714	3,531	20·1	18·5	1·5

* The annual rate of mortality during the ten years 1861–70 has not been corrected for deaths in Institutions.

† The rates of mortality for these towns have been corrected by the exclusion of deaths occurring in County Hospitals or Lunatic Asylums situate within the districts or sub-districts taken to represent the watering place, or by the exclusion or addition of a portion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

‡ The area of that portion of the parish of Tunbridge which forms part of the town of Tunbridge Wells, and is situated within the sub-district of that name, has been estimated from the proportion of the population enumerated within and without the sub-district. The correct area of each portion of the parish is not known to the Registrar-General.

TABLE XI.—LONDON—OUTER RING. **Births**; **Deaths** from **All Causes**, and from the **Seven Principal Zymotic Diseases**; and the **Annual Rate of Mortality** during the 13 Weeks ending 3rd July 1875.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase since 1871 has been the same as that which prevailed between 1861 and 1871. For the purpose of this Table a proportion of the deaths recorded in the two Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has been excluded as belonging to Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

* The *Registration* or *Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the prin town of the district or the greater part of the population is located. The boundaries of Registration or Union Counties therefore differ mor less from the boundaries of Counties (proper).

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties. ‡ See page 14, note

Note.—*The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epid diseases, also as to the statements respecting sanitary arrangements, &c. &c.*

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND. rom SMALL-POX, MEASLES, SCARLET-FEVER, DIPHTHERIA, WHOOPING-COUGH, FEVER, NSTITUTIONS registered in the Quarter ending 30th June 1875 in the DIVISIONS, ISTRICTS, and REGISTRATION SUB-DISTRICTS of ENGLAND.

* The *Superintendent Registrars' Districts* are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names; they are 629 in number, and are here arranged topographically under the Registration Counties.

† These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ See page 14, note †.

§ Kensington (1) and Fulham (1*a*) constituted one Superintendent Registrar's district until 1st April 1875.

II.—SOUTH EASTERN COUNTIES.—Superintendent Registrars' Districts—*continued.*

No.	Superintendent Registrars' Districts.	Area in Statute Acres.	Enumerated Population, 1871.	Marriages: Registered in Quarter ending 31 Mar. 1875.	Births: Registered in Quarter ending 30 June 1875. * The present number of Superintendent Registrars' districts is 629. The above numerical arrangement—1 to 627—was adopted on 1st January 1871. Three new Superintendent Registrars' districts, viz., Fulham (1*a*), Prestwich (467*a*), and Lanchester (546), have been constituted; and Shrewsbury (352) has been incorporated with Atcham (351).

* The *Sub-districts* (2194 in number) are sub-divisions of *Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† The numbers of Births and Deaths, as well as the details given, "Children under 1 year of age" and the twelve subsequent headings in this Table for London, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 4th April to 3rd July 1875.

‡ See page 4, note §.

* 46 : 1.—Of the 13 deaths from scarlet fever, 7 occurred in Burham, 5 in Aylesford, and 1 in Snodland ; the disease is stated to be s prevalent in the district.

† 49 : 5.—Of the 16 deaths from scarlet fever, 2 were registered in April, 9 in May, and 5 in June ; five deaths were also registered dur the first half of July. The Registrar states his belief that the disease is chiefly confined to his sub-district, which comprises only hal Maidstone town.

‡ 57 : 1.—The Registrar states that small-pox, from which 2 deaths occurred, has not spread.

§ 59 : 1.—Of the 18 deaths from scarlet fever, 11 were registered in April, 4 in May, and 3 in June ; the disease is principally confined the parish of Sittingbourne.

‖ 60 : 1.—Nearly half the deaths were attributed to diseases of the respiratory organs.

* 404 : 2.—Of the 10 deaths from scarlet fever, 6 occurred in the parish of Croft, and 3 in the Leicester Borough Fever Hospital.
† 407 : 3.—Scarlet fever is prevalent in Osgathorpe, where several cases have occurred. The sanitary authorities are now making every effort to arrest its progress.
‡ 409 : 1.—The 4 deaths from diphtheria occurred in one family in Seagrave.
§ 410 : 2.—Of the 13 deaths from scarlet fever, 7 were of children attending Knighton Street School. The Registrar states that he has called the attention of the district inspector to the system of drainage, which is defective.

* 622: 2.—Of the 30 deaths from scarlet fever, one was registered in April, 12 in May, and 17 in June; the disease is principally confined to the parish of Festiniog.

† See page 13, note *.

Remarks on the Weather during the Quarter ending June 30th, 1875.

By James Glaisher, Esq., F.R.S., *&c.*

In April, the weather was mild till the 6th, when the temperature descended below its average, and it was cold with the exception of the 4 days 18th to 21st, till the 26th; the average deficiency of mean temperature from the 1st to the 26th was 1°½. Vegetation, up to this time, was between 2 and 3 weeks late. On the 27th a warm period set in and continued, with few exceptions, throughout the whole month of May, which was fine and dry, till the 10th of June; the average excess of mean temperature for these 45 days was 3° daily; vegetation at this time, which had made great progress in May, was as forward on the 10th of June as in the average of seasons. From the 11th of June to the end of the quarter, the weather was cold; the deficiency on the average was 2°¾ daily.

The readings of the barometer at 160 feet above the level of the sea were above their averages on the 1st, 2nd, and 3rd of April (that for the 1st being as much as 0·61 in. in excess); they were below from the 4th to the 8th, above from the 9th to the 20th, a little below on the 21st and 22nd, above from the 23rd to the end of the month. The highest reading in the month was 30·36 ins. on the 1st, and the lowest 29·14 ins. on the 5th. In May the readings of the barometer were above their respective averages, from the 2nd to the 5th (that of the 1st was 0·04 in. below); below for the 6th, 7th, and 8th; above from the 9th to the 17th; below from the 18th to the 22nd; above from the 23rd to the 27th; and below to the end of the month, with the exception of the last day, which was 0·09 in. above. The maximum reading in the month was 30·24 ins. on the 11th, and the minimum was 29·42 ins. on the 18th. From the 1st to the 8th of June the readings of the barometer were alternately above and below their averages, but only to small amounts; they were below from the 9th to the 17th; above on the 18th and 19th; below on the 20th and 21st; above on the four following days, and then below to the end of the month. The highest reading in the month was 30·02 ins. on the 24th, the lowest was 29·32 ins. on the 15th.

The mean temperature of April was 6°·1 higher than in March, that of May was 8°·7 higher than in April; and that of June was 3°·9 higher than in May. (From the preceding 34 years' observations the mean temperature of April is higher than that of March by 5°·5; that of May is 5°·6 higher than in April; and that of June is 6°·1 higher than in May).

The mean temperature of April above that of March over the whole country was 5°·7; that of May above that of April was 7°·2; and that of June above that of May was 3°·3.

The mean temperature of the air for April was 46°·3, being 0°·2 higher than the average of the preceding 104 years; and 0°·9 below the average of the preceding 34 years, it was 3°·7 lower than the value in the year 1874, and 0°·4 higher than in the year 1873.

The mean temperature of the air for May was 55°·0, being respectively 2°·5 and 2°·2 higher than the average of the preceding 104 years and 34 years; it was higher than the corresponding values in 1874 and 1873 by 4°·5 and 4°·4 respectively.

The mean temperature of June was 58°·9, being 0°·7 higher than the average of the preceding 104 years, and the same as the average of the preceding 34 years; it was 0°·9 higher than the value in 1874; and the same as in the year 1873.

The mean high day temperatures of the air were 0°·6 and 1°·6 lower than their respective averages in April and June, but 0°·2 higher in May.

The mean low night temperatures of the air were 0°·1, 6°·1, and 1°·8 higher than their respective averages in April, May, and June.

Thus the days and nights of April and June were warm, but in May they were somewhat cold.

The mean daily ranges of temperature were 1°·4 and 1°·0 higher than their respective averages in April and June, but 0°·6 lower in May.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follows:—

Direction of Wind.	April.			May.			June.		
	Average.	1875.	Departure from Average.	Average.	1875.	Departure from Average.	Average.	1875.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	2¼	1	−1¼	1¼	4	+2¾	2	1	−1
N.	4	2	−2	4¼	3	−1¼	3¼	1	−2¼
N.E.	6	8	+2	7	2	−5	3¼	1	−2¼
E.	3½	7	+3½	2½	2	− ½	2¼	2	− ¼
S.E.	2	1	−1	1¾	2	+ ¼	1¾	2	+ ¼
S.	2½	2	− ½	2¾	4	+1¼	2	4	+2
S.W.	6¼	5	−1¼	7½	8	+ ½	10	10	0
W.	2¼	4	+1¾	2	6	+4	3¾	8	+4¼
Calm, nearly.	1	0	−1	2	0	−2	1½	1	− ½

The + signs denote excesses over averages; in the month of April the largest with + signs are opposite the N.E. and E. winds, which were the prevalent winds during this month; in May the + signs indicating the prevailing winds are opposite to N.W., the S., and W.; and in June to the S. and W. winds.

The − signs denote defect below averages; in April the largest numbers are opposite to the N., S.E., and S.W. winds; in May to the N. and N.E. winds; and in June to N. and N.E. winds.

At about London the decrease of atmospheric pressure from March to April was 0·112 in., from April to May was 0·033 in., and from May to June was 0·066 in. Over the whole country it was 0·107 in. from March to April, from April to May there was a small increase at Guernsey, and in Cornwall and Devonshire, then a small decrease at southern stations gradually increasing going northwards to fully 0·1 in. at extreme northern stations; the average for the whole country was a decrease of 0·054 in.; and from May to June there was a decrease everywhere, and of nearly the same amount, its average was 0·095 in.

The fall of rain in the three months was 5·4 ins.; in April there was a small deficiency; in May there was also a deficiency, both months were dry; in June the first 10 days were almost without rain, these were followed by several days rain, and at the end of the month the fall of rain exceeded the average by about ¼ of an inch. On June 29th, at Cardington, 2½ ins. fell within an hour, and Mr. Whitbread remarks that such a fall had not been experienced for more than 30 years; it fell during a thunderstorm, in which two cows were killed; this storm extended to Newport Pagnell.

NOTE.—In reading this table it will be borne in mind that the minus sign (−) signifies below the average, and that the plus sign (+) signifies above the average.

Thunderstorms occurred, on the 5th of April at Stonyhurst and North Shields. On the 7th of May at Cardington, Somerleyton, and Norwich; on the 8th at North Shields; on the 17th at Strathfield Turgiss, Streatley, Leicester, and Oxford; on the 18th at Gloucester, Royston, Cardington, Wisbech, and Hull; on the 19th at Chiswick, Leicester, Royston, Cardington, and Halifax; on the 23rd at Halifax, Stonyhurst, and Leeds; and on the 28th at Salisbury, Strathfield Turgiss, Cardington, Eccles, and Stonyhurst. On the 1st of June at Guernsey; on the 2nd at Guernsey and Salisbury; on the 3rd at Oxford, Llandudno, and Eccles; on the 4th at Somerleyton and Halifax; on the 8th at Helston; on the 9th at Guernsey, Truro, Brighton, Taunton, Salisbury, Strathfield Turgiss, Weybridge Heath, Leicester, Oxford, Gloucester, Royston, Cardington, and Calcethorpe; on the 10th at Cardington, Eccles, and Stonyhurst: on the 11th at Helston, Salisbury, Strathfield Turgiss, Leicester, Cardington, Calcethorpe, and Milltown; on the 12th at Strathfield Turgiss, Oxford, and Cardington; on the 15th at Calcethorpe, Eccles, Hull, Stonyhurst, and Cockermouth; on the 16th at Cardington; on the 17th at Leicester, Gloucester, Royston, Cardington, Calcethorpe, and Halifax; on the 18th at Brighton, Hastings, and Cardington; and on the 29th at Royston, Cardington, Somerleyton, and Calcethorpe.

Thunder was heard, but lightning was not seen, on the 5th of April at Halifax and Bywell. On the 6th of May at Calcethorpe, Bywell, and North Shields; on the 8th at Hastings; on the 18th at Salisbury and Calcethorpe; on the 19th at Osborne, Salisbury, Oxford, Eccles, and Hull; on the 23rd at Calcethorpe, Eccles, and Hull; on the 27th at Streatley; on the 28th at Taunton, Oxford, Royston, and Liverpool. On the 3rd of June at Strathfield Turgiss, Weybridge Heath, Streatley, Gloucester, Royston, and Cardington; on the 4th at Weybridge Heath, Royston, Cardington, Calcethorpe, and Hull; on the 9th at Osborne, Taunton, Aldershot Camp, Oxford, and Wisbech; on the 10th at Gloucester, Calcethorpe, Halifax, and Hull; on the 11th at Gloucester, Royston, Somerleyton, Halifax, and Stonyhurst; on the 12th at Eccles, Halifax, Hull, Allenheads, and Carlisle; on the 15th at Streatley and Gloucester; on the 16th at Somerleyton, Norwich, Hull, and Cockermouth; on the 17th at Aldershot Camp, Streatley, Oxford, Somerleyton, Halifax, and Hull; on the 18th at Osborne, Weybridge Heath, Royston, Somerleyton, and Hull; on the 21st

at Calcethorpe; on the 25th at Streatley; on the 26th at Carlisle; on the 28th at Hull; and on the 29th at Leicester and Oxford.

Lightning was seen, but thunder was not heard, on the 30th of April at Guernsey. On the 21st of May at Hastings. On the 2nd of June at Brighton and Hastings; on the 3rd at Oxford and Halifax; on the 11th at Helston and Somerleyton; on the 12th at Helston; on the 13th at Allenheads; on the 17th at Weybridge Heath, Oxford, and Wisbech; and on the 26th at Allenheads.

Solar halos were seen on the 1st, 7th, 14th, and 16th of April at Halifax; on the 17th at Oxford and Wisbech; on the 26th at Brighton, Strathfield Turgiss, Weybridge Heath, Oxford, and Wisbech; on the 27th at Brighton, Hastings, and Strathfield Turgiss; and on the 28th at Brighton, Hastings, and Oxford. On the 17th of May at Halifax; and on the 21st at Oxford. On the 2nd of June at Oxford; on the 5th at Helston and Brighton; on the 8th at Brighton and Oxford; on the 9th at Brighton; and on the 10th at Hull.

Lunar halos were seen on the 10th of May at Oxford; on the 11th at Brighton and Salisbury; on the 17th at Halifax; and on the 19th at Weybridge Heath and Oxford. On the 15th of June at Helston.

Auroræ boreales were seen on the 26th of April at Brighton; on the 30th at Streatley.

Snow fell on the 4th and 5th of April at Allenheads; on the 7th at Royston; and on the 22nd at Oxford.

Hail fell on the 5th of April at Truro, Liverpool, Eccles, and Halifax; on the 6th at Helston, Salisbury, Strathfield Turgiss, Oxford, Royston, Calcethorpe, and Halifax; on the 7th at Salisbury, on the 8th at Osborne and Silloth; and on the 22nd at Oxford and Gloucester. On the 7th of May at Cardington; on the 18th at Guernsey, Salisbury, Royston, Eccles, Cockermouth, and Allenheads; on the 19th at Osborne, Hastings, Taunton, Salisbury, Streatley, Leicester, Oxford, Royston, Cardington, Wisbech, Halifax, Stonyhurst, Allenheads, Bywell, and North Shields; on the 20th at Carlisle; on the 22nd at Halifax; on the 23rd at Wisbech, Eccles, Halifax, Hull, Stonyhurst, and Silloth; and on the 28th at Eccles. On the 10th of June at Aldershot Camp, Leicester, and Halifax; on the 11th at Salisbury, Leicester, Cardington, and Halifax; on the 12th at Weybridge Heath, Stonyhurst, Allenheads, and Carlisle; on the 13th at Allenheads; on the 15th at Eccles; on the 17th at Cardington and Cockermouth; on the 18th at Streatley; and on the 21st at Hull.

Fog prevailed on the 2nd of April at Taunton; on the 8th and 9th at Calcethorpe and Allenheads; on the 10th at Allenheads; on the 11th at Norwich, Calcethorpe, and Allenheads; on the 12th at Allenheads and Miltown; on the 14th at Aldershot Camp, Oxford, and Liverpool; on the 15th at Taunton; on the 16th at Calcethorpe and Liverpool; on the 17th at Calcethorpe and Liverpool; on the 18th at Liverpool and Hull; on the 19th at Hull; on the 27th at Guernsey; and on the 28th at Guernsey and Strathfield Turgiss. On the 1st and 2nd of May at Calcethorpe; on the 3rd and 4th at Hull; on the 5th and 8th at Hastings; on the 11th at Allenheads; on the 14th at Liverpool and Stonyhurst; on the 28th at Allenheads; and on the 30th at Eccles. On the 4th of June at Eccles; on the 19th at Helston and Weybridge Heath; on the 22nd at Helston; on the 25th at Weybridge Heath; on the 28th and 29th at Allenheads; and on the 30th at Helston and Allenheads.

Field elm in leaf,	the earliest	April 14, at Carlisle,		the latest	May 20, at Guernsey.
Wych elm in leaf,	„	„ 12, at Carlisle,		„	„ 18, at Hull.
Oak in leaf,	„	„ 25, at Strathfield,		„	„ 21, at Helston.
Lime in leaf,	„	„ 13, at Carlisle,		„	„ 10, at Hull & Milltown.
Sycamore in leaf,	„	„ 2, at Helston,		„	„ 10, at Calcethorpe.
Horse chestnut in leaf,	„	„ 7, at Carlisle,		„	„ 8, at Hull.
Common poplar in leaf,	„	„ 24, at Oxford,		„	„ 26, at Hull.
Hawthorn in leaf,	„	„ 6, at Calcethorpe,		„	„ 1, at Hull.
Hawthorn in blossom,	„	„ 27, at Helston,		„	„ 17, at Calcethorpe.
Hazel in leaf,	„	„ 30, at Milltown,		„	„ 16, at Hull.
Walnut in leaf,	„	May 25, at Milltown,		„	June 7, at Hull.
Apple in blossom,	„	April 25, at Helston,		„	May 11, at Allenheads.
Pear in blossom,	„	„ 10, at Milltown,		„	April 25, at Stonyhurst.
Cherry in blossom,	„	„ 10, at Bywell,		„	May 4, at Allenheads.
Plum in blossom,	„	„ 1, at Milltown,		„	„ 1, at Hull.
Lilac in blossom,	„	„ 21, at Taunton,		„	„ 31, at Allenheads.
Privet in blossom,	„	June 18, at Llandudno,		„	June 30, at Hull.
Honeysuckle in blossom,	„	May 13, at Llandudno,		„	„ 19, at Hull.
Mountain ash in blossom,	„	„ 8, at Carlisle,		„	May 22, at Milltown.
Syringa in blossom,	„	„ 22, at Oxford,		„	June 4, at Calcethorpe.
Laburnum in blossom,	„	„ 7, at Llandudno,		„	May 20, at Milltown.
Acacia in blossom,	„	June 4, at Wisbech,		„	June 19, at Hull.
Yellow broom in blossom,	„	April 20, at Taunton,		„	May 4, at Hull.
Wheat in flower,	„	June 15, at Cardington,		„	June 24, at Silloth.
Wheat in ear,	„	„ 4, at Calcethorpe,		„	„ 20, at Cockermouth.
Barley in flower,	„	„ 16, at Llandudno,		„	„ 18, at Cardington.
Barley in ear,	„	„ 10, at Calcethorpe,		„	„ 16, at Llandudno.
Oats in ear,	„	„ 23, at Calcethorpe,		„	„ 30, at Cockermouth.
Cuckoo arrived,	„	April 8, at Helston,		„	May 4, at Allenheads.
Swallow arrived,	„	„ 9, at Helston,		„	„ 2, at Stonyhurst.
Nightingale arrived,	„	„ 17, at Oxford,		„	April 28, at Taunton.

Cuckoo departed from Hull on the 27th of June.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING JUNE 30TH, 1875.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

Names of Stations and Observers.	Height of Station above Sea Level.	Year 1875.	Pressure of Atmosphere in Month.		Temperature of Air in Month.						Mean Temperature.		Vapour.			Mean Degree of Humidity. Sat.n = 100.	Mean Weight of a cubic foot of Air.	Mean Reading of Thermometer.		Wind.					Mean Amount of Ozone.	Mean Amount of Cloud.	Rain.	
								Mean						In a cubic foot of Air.						Relative Proportion of								
		Months.	Mean.	Range.	Highest.	Lowest.	Range.	Of all Highest.	Of all Lowest.	Daily Range.	Air.	Dew Point.	Elastic Force.	Mean.	Short of Saturation.			Maximum in Rays of Sun.	Minimum on Grass.	Estimated Strength.	N.	E.	S.	W.			Number of Days it fell.	Amount collected.
	feet.		in.	in.	°	°	°	°	°	°	°	°	in.	grs.	gr.		grs.	°	°								in.

NOTE.—*The Barometer Reading,*

Holkham,	8th April,	3h. p.m.,	30·698 in.,	has been altered to 29·698 in.
Barnstaple,	17th May,	9h. a.m.,	30·660 in.,	" 29·660 in.
Llandudno,	17th May,	9h. a.m.,	30·750 in.,	" 30·150 in.

Second Rain-gauges are placed—

			April.		May.		June.		Total during the Quarter.
At Strathfield Turgiss, at the height of 38 feet *above the ground*, the amount collected was			0·92 inches.	–	0·92 inches.	–	1·96 inches.	–	3·80 inches.
" Aldershot Camp,	"	25 feet	"	1·29 "	–	1·24 "	–	2·06 "	–	4·59 "
" Oxford,	"	22 feet	"	1·26 "	–	1·70 "	–	2·90 "	–	5·86 "
" Cardington,	"	36 feet	"	1·12 "	–	1·60 "	–	4·25 "	–	6·97 "
" Wisbech,	"	8 feet	"	0·80 "	–	1·59 "	–	3·22 "	–	5·61 "
" Nottingham,	"	39 feet	"	0·77 "	–	1·47 "	–	2·65 "	–	4·89 "
" Eccles (Manchester),	"	34 feet	"	0·54 "	–	2·35 "	–	3·33 "	–	6·22 "
" Milltown (Ireland),	"	40 feet	"	0·30 "	–	1·21 "	–	3·07 "	–	4·58 "

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	E.	S.	W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Number of Days on which it fell.	Rain. Amount collected.

The highest temperatures of the air were at Taunton, 87°·8; and Weybridge Heath, 85°·5.

The lowest temperatures of the air were at Holkham, 23°·2; and Lampeter, 24°·0.

The greatest daily ranges of the temperatures of the air were at Salisbury, 25°·4; and Royston, 23°·7.

The least daily ranges of the temperatures of the air were at Guernsey, 10°·9; and Hastings, 12°·4.

The greatest numbers of rainy days were at Stonyhurst, 53; and Allenheads and Milltown, 49.

The least numbers of rainy days were at Eastbourne, 26; and Brighton, Hastings, Norwich, and Holkham, 29.

The heaviest falls of rain were at Stonyhurst, 8·98 inches; and Barnstaple, 8·78 inches.

The least falls of rain were at North Shields, 3·05 inches; and Norwich, 3·63 inches.

Quarterly Meteorological Table for different Parallels of Latitude.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	E.	S.	W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Mean Number of Days it fell.	Rain. Mean Amount collected.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 107.] **Marriages**—*April, May, June*, 1875. **Births** and **Deaths**—*July, August, September*, 1875. [Price 9*d.*

General Register Office, Somerset House,
1st November 1875.

In the UNITED KINGDOM the *births* of 273,499 children, and the *deaths* of 158,811 persons of both sexes, were registered in the three months ending 30th *September* 1875. The natural recorded increase of population was thus 114,688.

The registered number of persons married in the quarter ending 30th *June* 1875 was 120,330.

The resident population of the United Kingdom in the middle of 1875 is estimated at 32,737,405; that of England and Wales at 23,944,459, of Scotland at 3,495,214, and of Ireland at 5,297,732. The birth-rate in the United Kingdom in the *third* quarter of 1875 was 33·1 per 1000, and the death-rate 19·2. The marriage-rate in the *second* quarter of 1875 was 14·7 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2193 Registrars in all the districts of England during the quarter ending 30th September 1875; and the MARRIAGES in 13,626 churches or chapels, in 7481 registered places of worship unconnected with the Established Church, and in 629 Superintendent Registrars' Offices, in the three months ending 30th June 1875.

The marriage-rate declined in the three months of Spring, which implies that in April, May, and June the people at large took a less cheerful view of their prospects than usual. The marriage depression is very striking in some agricultural counties. Low in 1869, the marriage-rate gradually rose year by year to a very high pitch in 1873, and has since declined. In the three months that ended in September the birth-rate exceeded the average of the season, and the death-rate fell below it. The towns still experience a higher mortality than the country; but their health is improving under the influence of sanitary measures, while the health of the country districts makes no sensible progress. In fact the country villages are growing more populous without any additional provision for a pure water supply and for cleanliness. The price of meat remains high; but the prices of wheat, potatoes, and coals are lower than in the corresponding months of the last two years. The number of paupers declined. Upon the whole the results of the returns may be summed up as satisfactory. Scarlet fever is the epidemic to be especially watched.

Marriages.

The industrial depression of the country is reflected in a marked decline of the marriage-rate during the three months ending June last, when 96,720 persons were married in England and Wales, equal to an annual rate of 16·2 per 1000 persons

living. This rate was one per 1000 below the average rate in the corresponding quarters of the ten years 1865–74, and was lower than in the same period of any year since 1862 except 1869, when the rate was so low as 15·6. After 1869 the marriage-rate steadily increased to 18·3 per 1000 in the three months ending June 1873, since which it has again declined. The marriage-rate during the June quarter of this year ranged from 11·0 and 11·2 per 1000 in the agricultural counties of the Eastern and South-midland Divisions, to 18·2 and 18·9 in the mining and manufacturing population of the Northern and North-western Divisions. The lowest county marriage-rates were 9·1 in Cambridgeshire, 10·1 in Suffolk, and 10·8 in Essex; the highest rates in counties were 19·5 in Lancashire, 20·5 in Northumberland, and 21·6 in Lincolnshire.

The marriages in England and Wales in the second quarter of this year were no less than 7·3 per cent. below the average number in the three preceding corresponding quarters, and if the increase of population be taken into account this decrease per cent. becomes 9·5. The most remarkable decline in the number of marriages occurred in Westmorland, Cornwall, and Cambridgeshire, in which counties it was equal to 23·5, 24·2, and 27·7 per cent. respectively. The marriages were below the average, although to a less extent, in each of the other counties, except in the North Riding of Yorkshire, and the extra-metropolitan portions of Middlesex and Kent. It may be noted that in the principally agricultural counties of the South-midland, South-western, and North-midland registration Divisions the marriages in the second quarter of this year were 12 per cent. below the average, whereas the deficiency in the North-western, York, and Northern Divisions, in which the bulk of the population is engaged either in manufacture or mining, did not exceed 5·5 per cent.

Births.

During the third or summer quarter ending 30th September last 210,781 births were registered, equal to an annual rate of 34·9 per 1000; this rate was 0·5 per 1000 above the average rate in the ten preceding corresponding quarters, although it was somewhat below the rate in the third quarter of 1874. The slight decline in the birth-rate during the first nine months of this year appears to be partly due to the decrease in the marriage-rate which commenced in the early part of 1874 and has since prevailed. It may be noted that the marriage-rate in England rose from 15·9 per 1000 in 1869 to 17·6 in 1873, and that the birth-rate as steadily increased from 34·8 in 1869 to 36·1 per 1000 in 1874.

The annual birth-rate in the third quarter of this year, which as before stated averaged 34·9 per 1000 in England and Wales, did not exceed 28·4 and 30·2 in the principally agricultural population of the South-western and South-eastern registration Divisions, whereas it was equal to 38·7 and 41·6 in the manufacturing and mining population of the North-western and Northern Divisions. The lowest county birth-rates were 26·9 in Rutlandshire, 27·1 in Dorsetshire, and 27·8 in Cornwall; whereas the rate was 39·4 in Lancashire, 41·5 in Staffordshire, and 45·0 in Durham.

In the eighteen large English towns furnishing weekly returns the birth-rate last quarter averaged 36·7 per 1000, corresponding with the rate in the same quarter of last year, and exceeding by 1·8 the rate in the whole of England and Wales. In the several towns the birth-rate ranged from 31·5 and 32·3 in Norwich and Nottingham, to 41·6 and 50·0 in Sunderland and Salford. In fifty other large towns the birth-rate averaged 35·9 per 1000, against 36·2 in the corresponding period of last year, and was 0·8 below the rate in the eighteen largest towns. The birth-rate in these fifty towns ranged from 24·6 and 25·5 in Cheltenham and Hastings, to 45·5 and 47·1 in Wigan and Gateshead.

Movement of the Population.

The births registered during the three months ending September last exceeded the registered deaths in the same period by 89,322, whereas the excess of births over deaths during the corresponding periods of 1873 and 1874 was 89,491 and 85,799 respectively.

The natural increase to the population of England and Wales is constantly affected by both immigration and emigration. Returns published by the Board of Trade afford the means of estimating the amount of disturbance to the natural increase produced by emigration. During the third quarter of this year 45,978 emigrants sailed from the principal ports of the United Kingdom at which emigration officers are stationed. After distributing proportionately 297 whose nationality was undistinguished, and excluding 8418 foreigners, the emigrants of British origin were 37,560, including 24,049 English, 4344 Scotch, and 9167 Irish. Compared with the numbers returned in the corresponding quarter of 1874, the British emigrants who sailed last quarter showed a decline of 36 per cent. ; and those in 1874 were 2 per cent. less than the number in the same period of 1873. The proportions of emigrants last quarter to a million of the population of the three portions of the United Kingdom were respectively 1004 in England, 1243 in Scotland, and 1730 in Ireland. The decline of Irish emigrants last quarter was very remarkable, the number being less by 43 per cent. than the average in the corresponding quarters of the five years 1870–4. The total number of emigrants leaving the United Kingdom last quarter was lower than in the corresponding period of any year since 1862 : 60 per cent. of the emigrants started for the United States, 21 per cent. for the Australian Colonies, 15 per cent. for British North America, and 4 per cent. for all other places.

Prices, Pauperism, and Meteorology.

The average price of wheat in the third quarter of this year was 49*s.*, showing an increase of 6*s.* 6*d.* upon the mean price during each of the two preceding quarters of the year, when it was lower than in any quarter since March 1870. The mean last quarter was, however, considerably lower than in the same period either of 1873 or 1874, when it was 61*s.* 4*d.* and 55*s.* 5*d.* respectively. The mean price of the best potatoes last quarter averaged 82*s.* per ton in the Borough and Spitalfields Markets, against 107*s.* 6*d.* and 90*s.* in the corresponding quarters of 1873 and 1874. The price of meat, which had showed a marked increase during May and June, further increased but slightly during the three months ending September now under notice. The mean price of beef, by the carcase, at the Metropolitan Meat Market averaged 6½*d.*, 6¾*d.*, and 7*d.* respectively in the first three quarters of this year ; the mean price of mutton, which was 6½*d.* and 7½*d.* during the quarters ending March and June, was again 7½*d.* in the three months ending September. The average price per ton of the best sea-borne coal in the London Market, put in barge from the collier in the Thames, was 20*s.* 4*d.*, against 27*s.* 6*d.*, 30*s.* 1*d.*, and 23*s.* 3*d.* in the three preceding corresponding quarters. The average price of consols during the quarter was 94*l.* 7*s.*, 6*d.* a further increase of 12*s.* 6*d.* upon the average price in recent quarters, and was higher than in any quarter since December 1868. The average minimum rate of discount charged by the Bank of England during the three months ending September last was 2*l.* 8*s.* 8*d.*, and lower than the average minimum rate in any quarter since the last of 1868.

The average number of paupers relieved on the last day of each week during the quarter, derived from returns furnished by the Local Government Board, was 681,176, of which 125,578 received in-door, and 555,598 out-door relief. The number of in-door paupers was less by 3·4 per cent. than in the corresponding period of 1874, whereas the decline in the number of out-door paupers was equal to 6·3 per cent. In the September quarter of 1870 the average number of out-door paupers was 789,409 ; the numbers returned in the corresponding quarters of the five years 1871–5 have showed a continuous decline. The 555,598 last quarter were 30 per cent. less than those in the corresponding period of 1870, above referred to, notwithstanding the considerable increase of population in the past five years. The number of in-door paupers in the same period has decreased by 9 per cent.

Remarks upon the meteorology of the quarter and accompanying tables, furnished by Mr. James Glaisher, F.R.S., will be found on pp. 65–72. The cold weather which set in on 11th June continued throughout July and until 5th August. The mean temperature during this period of 56 days showed an average deficiency of 3°·1. On 6th August warm summer weather set in, and with few exceptions prevailed up to the end of the quarter ; this period also embraced 56 days, the average

excess being 3°·2. The mean temperature of the quarter, as determined by Mr. Glaisher, was 60°·7, and 1°·1 in excess of the average for the corresponding period in 104 years. July was cold, the mean showing a deficient temperature of 2°·5, whereas the excess in August and September was 2°·2 and 3°·5 respectively. Hot weather prevailed for a few days in the middle of August and during the third week of September. In the large provincial towns furnishing returns the mean temperature ranged from 57°·6 and 57°·8 in Hull and Salford, to 59°·4 and 59°·5 in Manchester and Norwich.

The fall of rain during the quarter at Greenwich amounted to 10·3 inches, and exceeded by 2·9 inches the average quantity in the corresponding period of 60 years. The amounts measured in the three months were respectively 5·3 inches in July, 2·3 in August, and 2·7 in September. The rainfall in July was more than double the average amount; the amounts in August and September differed but slightly from the average. The average rainfall at the various stations of observation between latitude 50° and 55° was 10·3 inches; between 50° and 51° the average fall was 8·9 inches, whereas between 53° and 54° it was 11·9 inches. The rainfall measured in the large English towns ranged from 7·6 inches in Leeds, to 14·5 inches in Manchester. During the nine months ending 30th September last the rainfall at Greenwich, for London, amounted to 20·1 inches, and exceeded the average amount in the same period of 60 years by 1·9 inches. When will the wasted and wasting waters of floods be stored up?

State of the Public Health; Deaths.

During the three months ending 30th September last 121,459 deaths were registered in England and Wales. The annual death-rate during this period was equal to 20·1 per 1000 of the estimated population, and was one per 1000 below the average rate in the corresponding quarters of the ten preceding years, 1865–74. The rate last quarter was lower than in the same period of any year since 1862, excepting only in 1867 and 1873, when it was 19·9 and 19·5 respectively.

The 121,459 deaths included 63,208 of males and 58,251 of females; the male death-rate was equal to 21·5 per 1000, and the female rate to 18·8. Of equal numbers living the deaths of males last quarter were equal to 114 to each 100 deaths of females. It may be noted that in 1857 and 1858 the proportion of male to female death-rate was as 107 to 100, whereas the excess of male mortality has since steadily increased, and in 1874 was as 113 to 100.

The annual death-rate among persons last quarter, which was equal to 20·1 per 1000 in England and Wales, ranged in the eleven registration Divisions from 15·9 and 16·1 in the principally agricultural counties of the South-western and South-eastern, to 23·3 and 23·7 in the North-western and Northern, the population of which is mainly engaged in mining or manufacture. The death-rate in Sussex and the extra-metropolitan portion of Surrey was so low as 14·8 and 14·9 per 1000, whereas in Lancashire it was 24·3, and in the East Riding of Yorkshire 25·1.

In the principal urban population, estimated at more than thirteen and a half millions of persons, the death-rate last quarter averaged 22·3 per 1000, while in the remaining or rural population of about ten millions it did not exceed 17·2. The urban rate was 1·6, and the rural rate only 0·1 below the average rates in the same populations in the ten preceding corresponding quarters. Urban rates have undoubtedly in recent years showed a commencement of the results to be expected from the awakening of national interest in sanitary matters. Urban sanitary authorities, with the assistance of their medical officers of health, have in most large towns been for some time earnestly endeavouring to improve the public health, and the death-rate has been reduced. The sanitary welfare of rural districts is for the most part in the keeping of local boards of guardians, who in a large proportion of cases have not yet formed a proper estimate of their responsibilities under the Public Health Act of 1872, and except in certain localities where combined sanitary districts have been formed, the medical officer of health is usually a local practitioner, often without any special qualifications for the appointment, who receives an almost nominal salary. Under these circumstances it can hardly be a matter for surprise that comparatively little sanitary work has yet been done in rural districts, and that the decline in their death-rate has not kept pace with that of our larger urban population.

In eighteen of the largest English towns, including London, with an estimated population of rather more than six and a half millions of persons, the death-rate last quarter averaged 23·8 per 1000 (against 24·2, 23·9, and 24·4, in the corresponding quarters of 1872, 1873, and 1874) and exceeded the general urban rate by 1·5. The rates in these eighteen towns ranged from 19·2 and 21·5 in Portsmouth and London, to 30·1, 31·3, and 32·4 respectively in Hull, Leicester, and Salford. In fifty other large towns, having a population of about two millions and three quarters, the death-rate was equal to 21·4 per 1000, showing a decline of two per 1000 from the rate which prevailed in the same period of 1874, and being 2·4 per 1000 below the rate in the eighteen largest towns. Among these fifty towns the lowest rates were 14·8 in Dover, 15·1 in Reading, 15·2 in Cheltenham, 15·5 in Devonport, 16·0 in Hastings, and 16·1 in Southampton. The following were the highest rates:—Wigan 26·3, Northampton 26·8, Bury 26·8, Gateshead 27·3, Stockport 28·7, Preston 31·1, and Ashton-under-Lyne 37·2. The high rates in these last-mentioned towns were almost entirely due to the fatality of the principal zymotic diseases. Their sanitary condition is deplorable.

It will be useful to notice briefly a few of the principal features of the age distribution of the mortality during last quarter, more especially with reference to infant mortality, which in summer is always excessive owing to the epidemic prevalence of diarrhœa. The 121,459 deaths at all ages included 37,118 of infants under one year of age, equal to 176 per 1000 of the *births registered*. Infant mortality last quarter, measured in this manner, slightly exceeded the proportion in the same periods of 1873 and 1874, when it was 173 and 174 per 1000, but was considerably lower than in the three preceding years 1870–1–2, when 200, 194, and 182 deaths under one year occurred to each 1000 births registered. In the agricultural counties of the South-western registration division infant mortality last quarter averaged but 119 per 1000, and was but 95 in Dorsetshire and 114 in Wiltshire; whereas in the principally mining population of Durham and Northumberland it was equal to 222 and 223, in Nottinghamshire to 215, and in the East Riding of Yorkshire to 252 per 1000. In explanation of the high rate of infant mortality in the East Riding of Yorkshire it may be mentioned that in the Districts of Hull and Driffield this proportion of infant mortality was so high as 317 and 290 per 1000 respectively. Excessive rates of infant mortality are almost invariably found in urban populations; but it is also important to bear in mind the wide range in the rate of mortality among infants in different towns. In the eighteen large English towns for which weekly returns are published infant mortality averaged 222 per 1000, exceeding by 46 per 1000 the proportion in the whole of England and Wales, and corresponding with that in the mining county of Durham. In these eighteen towns, however, infant mortality ranged from 149 and 178 in Oldham and Portsmouth, to 277 in Liverpool, 288 in Hull, 300 in Norwich, and 407 in Leicester. The remarkable difference between the rate of 149 in Oldham and 407 in Leicester appears to afford ground for special inquiry, which could not fail to result in a useful contribution to our, at present, limited knowledge of the true cause of these wide variations in urban infant death-rates.

The annual rate of mortality last quarter among children and adults aged between one and 60 years was equal to 11·0 per 1000 living at these ages in the whole of England and Wales, which differed but slightly from the rate at these ages in recent corresponding quarters; in the eighteen large towns it averaged 13·3 per 1000, whereas it ranged from 9·7 and 10·3 in Norwich and Portsmouth, to 16·8 and 19·9 in Oldham and Salford. Among persons aged 60 years and upwards the rate of mortality last quarter averaged 54·8 per 1000 in the English population, against 55·7 and 57·3 in the two preceding corresponding quarters. This decline in the death-rate among elderly persons was probably in great measure due to the exceptional fatality that occurred at these ages during the first two quarters of the year. In the eighteen large English towns the annual death-rate among persons aged upwards of 60 years averaged 59·8 per 1000, but ranged from 45·1 and 46·3 in Bradford and Bristol, to 74·8 and 101·0 in Newcastle-upon-Tyne and Liverpool. The excessive death-rate in Liverpool among elderly persons was not exceptional last quarter; it was still more marked in the first two quarters of the year. The death-rate at all ages in Liverpool last quarter was as 109 to 100 in

the aggregate of the eighteen towns, while at the ages 60 years and upwards the proportion was as 169 to 100. The death-rate at all ages in Liverpool has recently showed a considerable decline, but the rate among elderly persons still conspicuously reflects the unhealthiness of the town.

The deaths from all causes registered last quarter included 14,006 which were referred to diarrhœa, 4609 to scarlet fever, 2883 to whooping-cough, 2849 to different forms of fever, 1152 to measles, 620 to diphtheria, and 164 to small-pox; in all, 26,283 deaths resulted from these seven principal zymotic diseases. The 26,283 zymotic deaths yield an annual rate of 4·4 per 1000, against 3·9 and 4·7 in the corresponding quarters of 1873 and 1874; in the same period of the three years 1870–1–2 the zymotic rate was so high as 6·0, 5·5, and 4·7, respectively. In the eleven registration divisions the zymotic rate last quarter ranged from 2·2 in the South-western agricultural counties, to 5·6 and 5·7 in the principally manufacturing population of the York and North-western Divisions. These zymotic diseases invariably show greater fatality in urban than in rural populations; it will be useful, therefore, to notice the death-rate from these causes in some of the larger towns. In the eighteen largest towns it averaged 6·5 per 1000, ranging from 4·6 and 4·9 in Portsmouth and Oldham, to 11·4 and 12·5 in Salford and Leicester. In the 50 towns, ranking next in size, the zymotic rate averaged 5·0 per 1000; it was but 1·5 in Southampton, 1·8 in Shrewsbury, and 1·9 in Dover, while it ranged upwards to 8·5 in Yarmouth, 9·3 in Northampton, 9·6 in Preston, and 14·1 per 1000 in Ashton-under-Lyne. In Salford the zymotic fatality arose from the combined effects of measles, scarlet fever, whooping-cough, and diarrhœa; scarlet fever as well as diarrhœa were exceptionally fatal in Leicester; diarrhœa was the principal cause of the high zymotic rate in Yarmouth, Northampton, and Preston; and in Ashton-under-Lyne measles and scarlet fever contributed, with diarrhœa, to produce the exceptional annual death-rate of 14·1 per 1000 from the seven principal zymotic diseases.

The 14,006 deaths from diarrhœa in England and Wales last quarter were equal to an annual rate of 2·3 per 1000, against 2·4 and 2·2 in the two preceding corresponding quarters. In eighteen of the largest English towns the annual rate, which had been 4·5 and 3·8 in the third quarters of 1873 and 1874, further declined to 3·6 last quarter. In fifty towns, ranking next in size to the eighteen largest, the diarrhœa rate in the three past summer quarters has been successively 2·9, 3·0, and 3·2 per 1000; and in the residue of the population of England and Wales it has been 1·3, 1·4, and 1·6 in the same periods. Here is an important problem for investigation; in our eighteen largest towns the death-rate from diarrhœa has steadily declined, whereas it has increased in fifty other large towns, and increased at a greater rate in the rural portions of England and Wales. If it may be assumed that the mortality from diarrhœa is in any way the result of unfavourable sanitary conditions, which cannot be denied if the disease be, however remotely, one of excrementitious origin, then the above-mentioned facts point to real sanitary progress in the eighteen towns, whereas in the other towns and in the rest of England the growing evils of overcrowding, the increasing difficulties of sewage disposal, and the continued pollution of streams in many cases used as sources of water supply, have not even been kept in check. In most of our largest towns public interest in sanitary matters is increasing day by day, and already real progress has been made. Similar progress has not yet been shown in the smaller towns and rural districts where it is much wanted. The annual death-rate from diarrhœa last quarter, as before stated, averaged 1·6 in England and Wales, exclusive of the 68 large towns; in the South-western Division, principally agricultural, the rate was but 0·93 per 1000, and in one of its counties, Dorsetshire, was so low as 0·54. In North Wales it was still lower, only 0·47 per 1000. In the manufacturing and mining populations of the North-western and York Divisions, the rate exceeded 3 per 1000; it was 3·7 in Lancashire, and 4·0 in the East Riding of Yorkshire. In Warwickshire and Leicestershire the diarrhœa rates were 4·8 and 5·0, owing to the high rates which prevailed in the boroughs of Birmingham and Leicester. The statistics of diarrhœa mortality last quarter, and in past years, are specially discussed in greater detail on pp. ix–xi.

Next to diarrhœa, scarlet fever was by far the most fatal epidemic disease during last summer. The last two general epidemics of scarlet fever in England

reached their climax in 1863 and 1870, causing a death-rate equal to 1·5 per 1000 in both of those years. After 1870 the mortality from this disease declined rapidly and steadily until the end of the September quarter of 1873; it was but 0·5 per 1000 in 1872, and further fell to 0·4 in the first nine months of 1873. The present epidemic commenced in the last quarter of 1873, causing a death-rate of 0·9 per 1000; it increased in intensity throughout 1874, and a death-rate of 1·4 in the last quarter raised the average of the year to 1·04, which was, however, 30 per cent. below the rate in the two epidemic years 1863 and 1870 above mentioned. During the first nine months of this year the epidemic has continued to prevail, but the fact that the fatal cases in each quarter have been below those in the corresponding quarter of last year appears to suggest that the climax of the present epidemic occurred in the last quarter of 1874. Although it may be inevitable that, following the course of previous epidemics, the scarlet fever deaths in the last three months of this year will exceed those returned in the quarter now under notice, there is every reason to expect that the fatality will afterwards rapidly subside. The death-rate from scarlet fever in England in the first nine months of this year has averaged 0·77 per 1000, against 0·91 in the same period of last year. In the three months ending September last the annual scarlet fever rate averaged 0·76 per 1000; it was only 0·37 both in the South-midland and South-eastern Divisions, whereas it was 1·02 in Wales, and 1·19 in the North-midland Divisions. Towns as a rule are the centres of infection for scarlet fever as for other zymotic diseases. Among the large towns the death-rate from scarlet fever last quarter was equal to 3·4 in Bristol, 3·2 in Stockport, 3·0 in Birkenhead, 2·9 in Maidstone, 2·3 in Bradford, and 2·0 in Ashton-under-Lyne. In the following smaller towns and villages the fatality in proportion to population was still more intense: — Aylesford, Luton, Barking, Beccles, Buckfastleigh, Uffculme, Redruth, Wigston, Sleaford, Ashover, Clitheroe, Keighley, Holmfirth, Kippax, Driffield, Frizington, Holywell, and Flint. Perhaps the most remarkable fatality of scarlet fever last quarter was that in Buckfastleigh, a small town (little more than a village) in which worsted spinning was said to be on the increase at the Census in 1871; the parish then had a population of 2638 persons, and even assuming that this may now have increased to 3000, which is improbable, the 21 fatal cases of scarlet fever there recorded last quarter would be equal to an annual rate of 28 per 1000. Scarlet fever was undoubtedly epidemic in London last quarter, but if the epidemic had been as fatal in the Metropolis as it was in Buckfastleigh the result in deaths during the three months would have been more than 24,000, instead of the 1076 that actually occurred. It would be interesting to know what the sanitary condition of this manufacturing village can be. A zymotic disease seldom assumes so fatal a character, except under sanitary conditions extremely favourable to its development.

It is satisfactory to be able to turn from the excessive fatality of diarrhœa and scarlet fever to consider the mortality from fever, simply so called, consisting of typhus, enteric or typhoid, and simple continued fever. The deaths referred to these forms of fever have showed a remarkable and steady decline in recent years, which was maintained during the quarter now under notice. The annual death-rate from fever averaged 0·93 per 1000 in England and Wales during the five years 1865–9, and declined to 0·66 in the last quinquenniad 1870–4; in the last five years the death-rate from fever declined year by year from 0·80 in 1870 to 0·58 in 1874. In the first nine months of 1875 the fever rate has not exceeded 0·50, and in the three months ending September last it was 0·47, against 0·60 in the five preceding corresponding quarters. It has been asserted that enteric fever is essentially a disease of agricultural districts, but generally speaking it is found that the death-rate from "fever," the large majority of which is enteric or typhoid, is higher in urban than in rural populations. During last quarter the fever rate was only 0·30 and 0·34 in the mainly agricultural population of the Eastern and South-western registration Divisions, whereas it was twice as high, or 0·63 in the manufacturing and mining population of the North-western, York, and Northern Divisions. If the death-rate from those cases of fever certified as enteric or typhoid be alone taken into account, it may be stated that in the two agricultural Divisions above mentioned it was 0·31 per 1000 in 1873, whereas in the three manufacturing or mining Divisions, which contain an excessive proportion

of urban population, it was 0·48, or 55 per cent. higher than in the rural population. In the eighteen large towns the annual fever rate last quarter averaged 0·51 per 1000, and ranged from 0·33 and 0·35 in London and Newcastle-upon-Tyne, to 1·35 in Nottingham and Sheffield. The remarkable decline in the prevalence and fatality of fever in London in recent years affords conclusive evidence of the improving sanitary condition of the Metropolis, the result of more complete sanitary organisation, of increased facilities for isolation of fever cases, and a more liberal devotion of intelligence and money to sanitary purposes. Among the 50 other large towns, the fever rate last quarter was so high as 1·37 in Carlisle (this city has for many months suffered from a remarkably high death-rate from various forms of zymotic disease, including epidemics of scarlet fever and measles, as well as enteric fever), 1·28 in Dudley (where the fatality was said to be due to impure water), and 1·01 in Ashton-under-Lyne. Among other localities in which the fatality of fever was especially marked during last quarter may be mentioned the District of Wellingborough (especially Higham Ferrers sub-district), the parish of Ramsey (Hunts), Nuneaton, Southport, the Districts of Dewsbury and Wakefield, Cottingham sub-district (near Hull), Fishguard, and Bryngwran sub-district of Anglesey.

The 2883 deaths referred to whooping-cough, although showing a decline from the numbers in the two previous quarters of the year, considerably exceeded those in the corresponding quarter of each of the five preceding years 1870–4. The fatality from this disease was continually above the average throughout the quarter in London, and showed exceptional severity in Margate, Wantage, Waltham Abbey, Dronfield, Standish, Kirk Leatham, and Heworth.

The fatal cases of measles, which were 3801 in the first quarter of 1874, have steadily declined in each subsequent quarter to 1161 in the three months ending September last. The annual death-rate from measles last quarter did not exceed 0·19 per 1000, whereas in the 20 years 1850–69 it averaged 0·44, and was 0·50 in 1874. Exceptional local outbreaks of measles occurred last quarter at Portland, Holbeck, Whitworth (Rochdale), and Raunds (Thrapston).

Notwithstanding the generally increased fatality from scarlet fever, the 620 deaths referred to diphtheria were lower than in any quarter since the third of 1873, when they were but 502. The disease was especially fatal round Maidstone, near Taunton, and at Curry-Rivell (Somersetshire).

Small-pox caused but 164 deaths in England and Wales during last quarter. The previous lowest quarterly number, returned since the beginning of 1870, was 249 in the fourth quarter of 1873. The 164 last quarter included 15 in London, 14 of which were fatal cases of chicken-pox, 46 in the West-midland Division, 51 in the North-western Division, and 28 in Yorkshire. The 46 returned in the West-midland Division included 20 in Bristol and Clifton, and the same number in Birmingham and Aston Districts. Of the 51 in Cheshire and Lancashire, 16 occurred in Stockport, and 6 both in Salford and Haslingden. Keighley contributed 12, and Leeds and its suburbs 13, of the 28 deaths from small-pox in Yorkshire. No death from small-pox occurred in the agricultural counties of the South-midland and Eastern Divisions, and only one in the Welsh Division. The deaths referred to small-pox in England were probably fewer last quarter than at any period since the discovery of the efficacy of vaccination.

In workhouse establishments, hospitals, and public lunatic asylums, 9318 deaths were registered last quarter, equal to 7·7 per cent. of the total deaths; in the corresponding quarter of each of the two previous years the proportion of institution deaths was 8·1 and 7·8 per cent. More than half the 9318 deaths in institutions, namely 4711, were recorded in the eighteen largest towns, in which the percentage of deaths in institutions to total deaths was 11·9; in the remainder of England and Wales this percentage was but 5·6. In the several large English towns it ranged from 4·5 in Bradford, to 15·4 in London.

To different forms of violence 4372 deaths were referred in England and Wales, equal to an annual rate of 0·7 per 1000 persons estimated to be living; in the principally agricultural population of the Eastern and South-midland divisions the death-rate from violence was only 0·5 and 0·6 per 1000, whereas it was equal to 0·9 per 1000 in the North-western, Northern, and Welsh divisions, where a large proportion of the population is engaged in manufacturing or mining operations. In

the eighteen large English towns the death-rate from violence averaged 0·8 per 1000 last quarter, and ranged upwards from 0·4 in Portsmouth, to 1·1 in Hull, 1·2 in Manchester and Newcastle-upon-Tyne, and 1·3 in Liverpool. More than seventeen thousand deaths in England and Wales resulted from violent causes in each of the three years 1872–3–4, a very large proportion of them directly due to accidents arising from negligence or recklessness in manufactories, mines, or workshops. How far these fatal results might be reduced, is a subject well worthy of serious consideration.

During the three months 6,278, or 5·2 per cent. of the deaths, were registered upon the information of the coroner, being inquest cases; the average proportion of inquest cases to total deaths in England and Wales in the two preceding corresponding quarters was 5·3 and 5·2 per cent. In the eighteen towns the inquest cases last quarter averaged 5·7 per cent. of the total deaths, the proportion in the several towns varying from 3·0 in Sheffield and 3·4 both in Bradford and Leeds, to 6·3 in Birmingham and 9·2 in Manchester. Were too few inquests held in Sheffield last quarter, or too many in Manchester? The proportion of inquests held in Birmingham has declined considerably since the recent appointment of a new coroner to the borough.

Health of Foreign Cities.

In Table xiii. will be found a summary of the vital statistics of 22 Indian and Foreign cities from which the Registrar General is favoured with weekly returns. The population of these 22 cities is estimated at about ten millions of persons, and the death-rate therein during the third quarter of this year averaged 28·9 per 1000, against 23·8 in the eighteen largest English towns. In these Foreign cities the death-rates ranged from 20·9 and 21·4 in Turin and Vienna, to 39·4 in Berlin and 48·6 in Alexandria. Typhoid fever was somewhat prevalent in Paris; both typhus and diphtheria in Berlin; fevers in Rome and Naples; and small-pox and diphtheria in New York. So far as the classification of diseases adopted in the different towns renders a comparison possible, the annual death-rate from diarrhœa last quarter was but 0·18 per 1000 in Turin, and less than one per 1000 in Amsterdam and Rotterdam, whereas it was 6·0 in Christiania, 6·5 in Munich, and 11·9 in New York. In the eighteen large English towns the diarrhœal rate averaged 3·6 per 1000, and ranged from 1·6 in Bristol, to 9·2 in Leicester. Infant mortality, measured by the proportion of deaths under one year to births, which averaged 222 per 1000 in the large English towns, was equal to 136 in Turin, 238 in Naples, 283 in Rome, 290 in Hamburg, and so high as 508 in Berlin.

Summer Diarrhœa.

In discussing the mortality from the principal zymotic diseases during the third or summer quarter of any year, diarrhœa claims special notice on other grounds than its mere numerical importance; the following statistics bearing upon its local and age distribution may therefore prove useful in the investigation its causes appear to demand.

The true causation of the annual epidemic of infantile summer diarrhœa, without a knowledge of which we are powerless to control its ravages, has still to be discovered. Beyond an impression that the disease is of excrementitious origin, and the certainty of the powerful influence exercised by high temperature upon its fatality, very little is really known about epidemic diarrhœa. So far as it is possible to conclude from the imperfect London Bills of Mortality of the period, it has recently been pointed out that the returns show a comparatively small mortality from diarrhœa during the summers of the early part of the present century; this might have been due to a different method of returning the causes of death, but it is also found that the rate of mortality among infants from all causes did not then show that marked increase during the summer which is now of annual occurrence, varying only in degree according to the summer temperature. Since civil registration was established in 1837, which enables us to

calculate the rate of mortality from different diseases for a series of years, with some approach to accuracy, the deaths referred to diarrhœa have proportionately showed a marked increase. During the five years 1838–42 the annual death-rate from diarrhœa averaged 0·22 per 1000 persons living in England and Wales. The causes of death were not abstracted during the next four years 1843–6, but in 1847 and 1848 we find the diarrhœa rate had increased to 0·68 and 0·64 per 1000, the disease being three times as fatal as in the first four years of registration. In the ten years 1850–9 the average diarrhœa rate had further increased to 0·85, and in the next decenniad to 0·87 per 1000. In the year 1860, which was remarkable for its wet, cold summer, the rate was only 0·49, whereas it was 0·94 both in 1859 and 1861. In 1865, the summer was hot, and the diarrhœa rate was 1·13 per 1000, while in 1868, when the summer was still hotter, it reached 1·39. Since the marked increase in 1865, the death-rate from diarrhœa has not again fallen to the average rates of previous years. In the five years 1865–9 the rate averaged 1·04, and in the succeeding quinquenniad 1870–4 it was 1·01 per 1000. The death-rate from diarrhœa has therefore undoubtedly increased in recent years, but the explanation of the cause of this fact is not so clear. If we accept the excrementitious origin of the disease, how are we to explain the increase of diarrhœa during a period when the filth nuisances of our town populations had undoubtedly been reduced, and the fatality of typhus and typhoid fevers had unquestionably declined. In seeking for an explanation of this apparent anomaly, the fact that in the past seventy years we have abated the cesspool nuisance at the expense of the purity of our rivers, the source of much of our water supply, must of course be estimated at its proper value. Dr. Buchanan has recently urged upon health officers the importance of earnest co-operation in the collection of observation and information on this important subject, and the scientific study of such materials as will assist in the formation of accurate conclusions as to the course of this infantile fatality, its varying death results in different towns, and the best means for controlling it.

In England and Wales 14,006 deaths during the three months ending 30th September last were referred to diarrhœa, of which it may be estimated, from the experience of previous years, that 9224 were of infants under one year of age, 2948 of children aged between one and five years, and only 1834 of persons aged upwards of five years. Fatal diarrhœa is therefore essentially an infantile disease. In town populations the deaths of infants from diarrhœa bear a larger proportion to the total deaths referred to this disease than they do in rural populations. In London last quarter 74 per cent. of the 2128 deaths from diarrhœa were of infants under one year of age, 19 per cent. of children aged between one and five years, 2·7 per cent. of persons aged between 5 and 60 years, and 4·4 per cent. of persons aged upwards of 60 years. Infant mortality from all causes in London, which had been equal to 144 per 1000 in the three months ending June last, rose to 194 in the quarter now under notice; and as the rates exclusive of the deaths referred to diarrhœa were 133 and 141 per 1000 respectively, it is evident that the increase of infant mortality during the past summer quarter was almost entirely the result of diarrhœa. In England and Wales the proportion of deaths from diarrhœa under one year, to the deaths from this disease at all ages, have increased steadily in recent years from 44 per cent. in 1847, to 64 per cent. in 1873. In London in 1873 the proportion was 72 per cent., whereas in the third or summer quarter of this year it was, as before stated, 74 per cent., against but 34 per cent. in the second or spring quarter. It appears that the greater the fatality of epidemic diarrhœa, the larger is the proportion of infants that succumbs to it.

Among those features of the fatality of epidemic diarrhœa which stand most in need of solution, and the solution of which would assist in throwing light upon the true pathology of the disease, one of the most important is the remarkable variation in its fatality in different towns having similar characteristics as to situation and occupations of their inhabitants. Among the eighteen largest towns the diarrhœa rate last quarter ranged from 1·6 and 2·5 in Bristol and London, to 7·0 and 9·2 in Birmingham and Leicester. Why should the diarrhœa rate be 3·8 in Nottingham and 9·2 in Leicester? and why 5·7 in Salford when it was only 2·6 in Oldham? These are no exceptional differences, as the comparison of the

rates from diarrhœa in these towns would yield similar results in any recent years for which the figures are available. Among the fifty large towns the diarrhœa rate ranged from 0·8 and 1·0 in Southampton and Shrewsbury, to 7·6 and 7·9 in Preston and Ashton-under-Lyne. The same questions suggest themselves. Take the manufacturing towns of Lancashire, for example, and it appears that the annual rate from diarrhœa last quarter was but 2·1 in Rochdale and 2·6 both in Oldham and Blackburn, whereas it was 6·1 in Bury, 7·0 in Wigan, 7·6 in Preston, and 7·9 in Ashton-under-Lyne. Evidence appears strongly to point to the intimate relation between sanitary condition and the death-rate from diarrhœa, without attempting to decide the true cause of these variations. Such being the case, it rests with the health officers of the diarrhœa-plagued manufacturing towns to discover the nature of the sanitary shortcomings which lead to this waste of infant life, and the responsibility will then rest with their sanitary authorities to carry out such measures as will secure its decline. In conclusion, one more striking contrast will further serve to strengthen the urgent claim for investigation in the matter of diarrhœa mortality. The death-rate from this disease was 3·0 in Brighton and Hove (against 2·5 in London), whereas it was 7·3 in Yarmouth. The population of Brighton and Hove is estimated at 111,089, while that of Yarmouth is but 47,123. Sanitary condition being equal, the death-rate from diarrhœa should, therefore, be higher in Brighton than in Yarmouth, on account of the larger aggregation of population. Heat, moreover, being about the only known controlling element of diarrhœal fatality, this fatality should be higher in a south-coast than in an east-coast watering place. What other cause than essentially unfavourable sanitary conditions in Yarmouth can account for its death-rate from diarrhœa being 7·3 per 1000 last summer, and 4·3 per 1000 higher than in Brighton?

What is the treatment and food of infants in the diarrhœa-stricken towns? Is the fatal disease traceable to any zymotic poison in the dwellings, or in the waters?

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1865–75,** and in each Quarter of those Years.

YEARS –	1865	1866	1867	1868	1869	1870	1871	1872	1873	1874	1875

* Furnished by the Chief Cashier of the Bank of England.
† As published by the Comptroller of Corn Returns to the Board of Trade.
‡ These are the average prices at which seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns are the numbers enumerated in April 1871, raised to the middle of 1875 by the addition of four years and a quarter's increase, calculated on the rate which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE VII.—**Deaths** in **18 large English Towns** in the 13 Weeks ending 2nd October 1875.

(Estimated aggregate population in middle of 1875, 6,682,033; viz., 3,445,160 in London, and 3,236,873 in the 17 other Towns; see note to Table VI.)

554	Tynemouth - - - M† -	43,093	409	280	37·7	25·8	5·8	Nrth. Shields & Tynemouth Sub-
569	Carlisle - - - - M† -	34,781	312	220	35·6	25·1	6·2	St. Cuthbert & St. Mary Sub-dis.
	XI.—MONMOUTHSH. & WALES.							
582	Newport (Monmouth) M† -	32,362	307	152	37·6	18·6	2·0	Newport Sub-district.
583	Cardiff - - - - M† -	74,589	725	412	38·6	21·9	6·4	Cardiff Sub-district.
585	Merthyr Tydfil - - P -	98,576	964	447	38·8	18·0	3·1	Lower and Upper Merthyr Tydfil and Aberdare Sub-districts.
588	Swansea - - - M -	74,920	779	351	41·3	18·6	3·8	Swansea and Llangafelach, and Llansamlet (Neath) Sub-dists.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in t last column approximately represent, are Municipal or Parliamentary.

* For method of framing these estimates see note * to Table VI. As the population of Gosport, Devonport, Coventry, Macclesfield, a Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. T estimates of the present population of Dudley and Wigan have been based upon local information as to the increase of the inhabited houses these two boroughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in Cou Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the town, or by the exclusion addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or wh the Workhouse is situate outside that area.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase since 1871 has been the same as that which prevailed between 1861 and 1871. For the purpose of this Table a proportion of the deaths recorded in the two Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has been excluded as belonging to Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE XIII.—**Births** and **Deaths** in the **Third Quarter** of 1875 in **22 Foreign Cities.**

TOWNS.	POPULATION (enumerated or estimated).	BIRTHS.	DEATHS.	ANNUAL RATE per 1000 Persons living.		DEATHS FROM EPIDEMIC DISEASES.

* The *Registration* or *Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties. ‡ See page 14, note †.

Note.—*The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.*

* The *Superintendent Registrars' Districts* are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are 630 in number, and are here arranged topographically under the Registration Counties.

† These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ See page 14, note †.

§ Kensington (1) and Fulham (1*a*) constituted one Superintendent Registrar's district until 1st April 1875.

II.—SOUTH EASTERN COUNTIES.—Superintendent Registrars' Districts—*continued.*

No.	Superintendent Registrars' Districts.	Area in Statute Acres.	Enumerated Population, 1871.	Marriages	Births	Deaths		The Deaths in the Quarter are stated by the Registrars to include												
								Deaths of		Deaths from										
				Registered in Quarter ending 30 June 1875.	Registered in Quarter ending 30 Sept. 1875.	*Average in Quarters ending 30 Sept. in the 3 Years 1872-74.*	Registered in Quarter ending 30 Sept. 1875.	Children under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhœa.	Cholera	Violence.	Inquest Cases.	Deaths in Public Institutions.

* See page 61, note *.

† The present number of Superintendent Registrars' districts is 630. The above numerical arrangement—1 to 627—was adopted on 1st January 1871. Four new Superintendent Registrars' districts, viz., Fulham (1*a*), Prestwich (467*a*), Lanchester (546), and Pontardawe (587*a*), have been constituted; and Shrewsbury (352) has been incorporated with Atcham (351).

* The *Sub-districts* (2193 in number) are sub-divisions of *Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† The numbers of Births and Deaths, as well as the details given, "Children under 1 year of age" and the twelve subsequent headings in this Table for London, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 4th July to 2d October 1875.

‡ See page 4, note §.

* 264: 3.—The outbreak of measles, which spread over the whole island, is attributed to one or two families removing from different seaport towns to reside in the vicinity of Her Majesty's ships stationed in Portland harbour. Of the 29 deaths from the above disease, 12 were registered in July, 12 in August, and 5 in September.

† 266: 2.—Of the 7 deaths from scarlet fever, 6 were registered in July.

V.—SOUTH WESTERN COUNTIES.—Registration Sub-districts—*continued.*

No.	Registration Sub-districts.	Area in Statute Acres.	Enumerated Population, 1871.	Births: Registered in the Quarter ending 30 Sept. 1875. * 290 : 1.—Scarlet fever and diphtheria are stated to be prevalent in a mild form in the parish of Tintagel.

† 297 : 4.—The 6 deaths from fever were described as typhoid or enteric, and occurred in September. The outbreak is attributed to imperfect drainage. The Medical Officer of Health has suggested many improvements, and his suggestions have been referred to the Sanitary Committee.

‡ 300 : 2.—Of the 23 deaths from scarlet fever, 7 were registered in July, 6 in August, and 10 in September.

* 375 : 4.—The attention of the sanitary authorities has been called to the impure well water existing at Windmill End, where most of the above 15 deaths from fever occurred. The inhabitants have since been supplied with water from the South Staffordshire Waterworks, and other precautionary measures have been adopted to prevent the disease from spreading. No deaths from fever have been registered since the 13th September.

* 419 : 2.—The 13 deaths from scarlet fever occurred in Sleaford.
† 421 : 3.—Typhoid fever has been prevalent, although only 2 deaths have been registered from that disease. One case was referred to manure heaps in the vicinity of the dwelling, and the other was imported from Newark.
‡ 423 : 2.—Scarlet fever is now declining, the sanitary authorities being very diligent.

VII.—NORTH MIDLAND COUNTIES.—Registration Sub-districts—*continued.*

* 447 : 1.—The fatal case of small-pox was imported from Stockport.
† 448 : 4.—Of the 4 deaths from diphtheria, 3 occurred in the same family in Main-street, Frodsham.
‡ 450 : 2.—Of the 6 deaths from fever, 3 occurred in Newbold Astbury, where fever has been prevalent, and where in one family 3 deaths have occurred.
§ 454 : 1.—Of the 47 deaths from scarlet fever, 16 were registered in July, 15 in August, and 16 in September.
‖ 455 : 6.—The majority of the deaths from fever were those of paupers not belonging to the sub-district, but to the West Derby Union. They have been "boarded-out" in the Liverpool Workhouse (situate in this sub-district), and have died there.

* The Superintendent Registrar's District of Pontardawe (587*a*) was formed on 1st July 1875 by the severance of the civil parishes of Upper Ystradgunlais, Lower Ystradgunlais, and Llanguick, population 12433 in 1871 (which then comprised the Registrar's Sub-district of Ystradgunlais); of the civil parishes of Ynisymond and Killybebill (population 1295 in 1871) from the Sub-district of Cadoxton in the Superintendent Registrar's District of Neath (587); and of the civil parishes of Rhyndwyclydach and Mawr (population 3069 in 1871) from the Sub-district of Llandilotalybont in the Superintendent Registrar's District of Swansea (588). At the same time the civil parish of Higher Swansea (population 3654 in 1871) was severed from the Sub-district of Llangafelach and added to the Sub-district of Llandilotalybont in the Superintendent Registrar's District of Swansea.

† The averages of deaths inserted for the Sub-districts of Cadoxton (587 : 4) ; Llandilotalybont (588 : 1) ; and Llangafelach (588 : 2) ; as also for the new Superintendent Registrar's District of Pontardawe (587*a* : 1) have been derived from the numbers of deaths registered within the limits of the sub-districts as at present constituted.

‡ 588 : 1.—Typhoid fever, which has been lurking for some months in the valley of the river Lliw, is very prevalent in the parish of Llandilotalybont. The Registrar partially attributes it to the construction of waterworks at Velindre contaminating the water lower down the river.

§ 592 : 2.—No death occurred in this Sub-district from the 18th of May until the 11th of September.

592 ; 5.—Of the 11 deaths from scarlet fever, 10 were registered in July, and one in August. Of these 7 occurred in the parish of Llandebie.

XI.—MONMOUTHSHIRE AND WALES.—REGISTRATION SUB-DISTRICTS—*continued.*

Remarks on the Weather during the Quarter ending September 30th, 1875.

By James Glaisher, Esq., F.R.S., *&c.*

Following a period of warm weather of 45 days in duration ending 10th of June, one of cold began on 11th of June, and continued throughout the month of July, and till 5th of August, being of 56 days' duration, the average deficiency of daily temperature for these 56 days was 3°·1 ; and of that portion from 1st of July to 5th of August, or the first 36 days of this quarter, was 3°·3. On 6th of August a warm period set in, and with very slight exceptions continued till the end of the quarter ; for a few days about the middle of August, and for a week following the middle of September, the weather was very warm. The average excess of mean daily temperature for these 56 days was 3°·2. It is remarkable that in the interval beginning 11th of June, and ending 30th of September, there should be two periods of equal length, viz., 56 days each, one of warm, and the other of cold weather, and that their respective departures from their averages should have been to almost the same amount.

The readings of the barometer at 160 feet above the level of the sea at about London were below their averages on the 1st, 2nd, and 3rd of July ; they were above from the 4th to the 7th ; below from the 8th to the 11th ; a little above on the 12th and 13th ; below from the 14th to the 24th ; and above from the 25th to the end of the month. The highest reading in the month was 30·21 ins. on the 27th, and the lowest 29·19 ins. on the 9th. In August the readings of the barometer were above their respective averages from the 1st to the 8th (with the exception of the 6th, which was 0·02 in. below) ; below from the 9th to the 13th ; above from the 14th to the 27th (with the exception of the 24th, which was 0·11 in. below) ; a little below on the 28th and 29th ; and a little above on the last two days of the month. The maximum reading in the month was 30·20 ins. on the 21st, and the minimum was 29·58 ins. on the 12th. From the 1st to the 6th of September (with the exception of the 3rd, which was 0·06 in. below) the readings of the barometer were above their respective averages ; they were below from the 7th to the 10th ; above from the 11th to the 18th ; below from the 19th to the 29th ; and 0·06 in. above on the last day. The highest reading in the month occurred on the 6th, 30·17 ins., and the lowest on the 26th, 29·36 ins.

At Greenwich *the mean temperature* of July was 0°·2 higher than in June ; that of August was 3°·9 higher than in July ; and that of September was 3°·0 lower than that of August. (From the preceding 34 years' observations the mean temperature of July is 3°·3 higher than that of June ; that of August is 0°·8 lower than that of July ; and that of September is 4°·2 lower than that of August.)

The mean temperature of July *above* that of June over the whole country was 1°·4 ; that of August *above* that of July was 2°·5 ; and that of September *below* that of August was 2°·0.

The mean temperature of the air for July was 59°·1, being 2°·5 *lower* than the average of the preceding 104 years, and 3°·1 lower than the preceding 34 years ; it was 5°·3 and 4°·3 lower than the corresponding values in 1874 and 1873. Back to 1771 there have been only 15 instances of July of so low or somewhat lower temperature.

The mean temperature of the air for August was 63°·0, being 2°·2 higher than the average of the preceding 104 years, and 1°·6 higher than the preceding 34 years ; it was higher than the corresponding values in 1874 and 1873 by 2°·7 and 0°·3 respectively.

The mean temperature of the air of September was 60°·0, being 3°·5 higher than the average of the preceding 104 years, and 2°·8 higher than the preceding 34 years ; it was respectively 2°·1 and 5°·3 higher than the corresponding values in 1874 and 1873.

Back to 1771 there have been only eight Septembers so warm as this, viz.—

1779	it was 60°·7	1846	it was 60°·1
1795	„ 60°·8	1858	„ 60°·3
1815	„ 62°·3	1865	„ 63°·9
1818	„ 60°·7	1868	„ 60°·5

The mean high day temperatures of the air were 0°·8 and 2°·5 higher than their respective averages in August and September, but 6°·8 lower in July.

The mean low night temperatures of the air were 2°·2 and 3°·8 higher than their respective averages in August and September, but of the same value as its average in July, viz. 53°·2.

Therefore the days and nights in August and September were warm, and the days in July were very cold.

The mean daily ranges of temperature were 0°·1 and 0°·4 greater than their respective averages in August and September, but 3°·8 smaller in July.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follows :—

Direction of Wind.	July.			August.			September.		
	Average.	1875.	Departure from Average.	Average.	1875.	Departure from Average.	Average.	1875.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	2½	4	+1½	2	2	0	1½	2	+ ½
N.	3½	4	− ½	3	3	0	3½	1	−2½
N.E.	3¾	5	+1¼	3	3	0	5¼	4	−1¼
E.	1¼	3	+1¾	1¼	1	− ¼	1½	5	+3½
S.E.	½	1	+ ½	1¼	4	+2¾	1¾	3	+1¼
S.	2½	3	+ ½	3	5	+2	2	6	+4
S.W.	10½	5	−5½	10½	8	−2½	7¼	4	−3¼
W.	4	6	+2	3¾	5	+1¼	2½	5	+2½
Calm, nearly.	2¼	0	−2½	3¼	0	−3¼	4½	0	−4½

The + signs denote excesses over averages; in the month of July the largest + signs are opposite the N.W., N.E., E., and W. winds; in August the + signs are opposite SE., S., and W., and in September to the E., S., and W. winds.

The − signs denote defect below averages; in July the largest number with this sign is S.W., indicating a deficiency of this wind; in August and September there is also a deficiency of this wind, but in September this deficiency is made up by both the S. and W. winds being above their averages.

At London the increase of atmospheric pressure from June to July was 0·049 in., from July to August it was 0·076 in., and the monthly mean readings of the barometer for August and September were nearly the same. Over the whole country there was an increase of pressure from June to July, but larger in amount at northern stations than at southern stations. South of latitude 51° it was 0·050 in., between 51° and 53° it was 0·079 in., and north of 53° it was 0·130 in.; from July to August there was an increase of pressure; at stations south of 52° it was 0·072 in., and north of this parallel it was 0·017 in.; the change of atmospheric pressure from August to September was very small, at some stations there was a small increase, but generally there was a small decrease, the mean from all was a decrease of 0·002 in.

The fall of rain at Greenwich in July was 5·3 ins.; back to the year 1815 there have been only four instances in July with falls so large, viz,, in the year 1828, when it was 7·0 ins.; in 1834 it was 5·3 ins.; in 1853 it was 6·0 ins.; and in 1869 it was 5·8 ins. The fall of rain in July at nearly all stations greatly exceeded its average; it fell for the most part between the 13th and 23rd days, causing floods of very great violence in Monmouthshire and Glamorganshire, and in the Midland Counties generally. The fall of rain on the 14th day in Monmouthshire and Glamorganshire was as large as from 3 to 5 inches, and in Hereford and Gloucestershire from 1 to 3 inches, and exceeded one inch at many places, excepting in the northern counties, where little or no rain fell. The following table shows the daily fall of rain at our stations.

Names of Stations.	Heavy Falls of Rain from the 13th to the 23rd days of July 1875.										
	13th.	14th.	15th.	16th.	17th.	18th.	19th.	20th.	21st.	22nd.	23rd.

From this Table it will be seen that very heavy rain fell on every one of these days at one part of the country or other, and that the north of England till the 17th was free from heavy rain. The falls of rain were so heavy that the natural drainage failed to carry off the water, and wherever there was high ground in the watershed, the adjacent rivers became swollen, and caused injury to all property for considerable distances from the river, and in several instances loss of life.

Thunderstorms occurred, on the 1st of July at Eccles, Halifax, Stonyhurst, Bradford, Allenheads, and Bywell; on the 2nd at Llandudno, Liverpool, and North Shields; on the 3rd at Taunton and Cardington; on the 7th at Guernsey; on the 8th at Gloucester; on the 11th at Norwich, Wisbech, Allenheads, Carlisle, Bywell, and North Shields; on the 17th at Norwich, Calcethorpe, and Hull; on the 18th at Norwich, Wisbech, Leeds, Bywell, and North Shields; on the 19th at Wisbech, Hull, Bywell, and North Shields; on the 20th at Leicester, Halifax, and North Shields; on the 21st at Streatley, Leicester, Gloucester, and Cardington; on the 22nd at Taunton; on the

23rd at Osborne, Gloucester, and Cardington; and on the 25th at Leicester, Gloucester, and Calcethorpe. On the 3rd of August at Salisbury and Leicester; on the 6th at Cardington; on the 7th at Blackheath, Leicester, Royston, Cardington, Eccles, Halifax, and Hull; on the 8th at Guernsey, Helston, Truro, and Salisbury; on the 9th at Osborne, Streatley, Oxford, Gloucester, Cardington, Llandudno, Calcethorpe, Halifax, Hull, Stonyhurst, Allenheads, and Bywell; on the 10th at Allenheads, Bywell, and North Shields; on the 11th at Guernsey, Helston, Truro, and Hastings; on the 12th at Hastings, Leicester, Cardington, Llandudno, Calcethorpe, Eccles, Hull, and Bradford; on the 28th at Hastings; and on the 29th at Hull. On the 8th of September at Norwich, Eccles, Halifax, Stonyhurst, Bradford, Leeds, Allenheads, Bywell, and North Shields; on the 10th at Milltown; on the 13th at Guernsey; on the 14th at Helston; on the 16th at Osborne; on the 17th at Guernsey, Helston, Blackheath, and Llandudno; on the 18th at Milltown; on the 19th at Osborne, Strathfield Turgiss, Streatley, Oxford, Gloucester, Llandudno, Eccles, Halifax, Stonyhurst, Leeds, Cockermouth, and Allenheads; on the 20th at Cardington, Bradford, Silloth, and North Shields; on the 24th at Hastings, Salisbury, Gloucester, and Calcethorpe; on the 25th at Blackheath, and Wisbech; on the 26th at Bywell; and on the 27th at Hastings and Oxford.

On the 8th of September at Guernsey and Strathfield Turgiss; on the 9th at Streatley; on the 10th at Ramsgate; on the 17th at Truro, Taunton, and Leicester; on the 18th at Taunton; on the 19th and 24th at Silloth; on the 27th at Streatley, Cardington, and Eccles; and on the 28th at Cardington and Carlisle.

Lightning was seen, but thunder was not heard, on the 6th, 7th, 8th, 9th, 17th, and 18th of July; on the 3rd, 4th, 5th, 7th, 8th, 10th, 12th, 28th, 29th, and 30th of August; and on the 3rd, 6th, 7th, 8th, 9th, 16th, 17th, 18th, 19th, 21st, 24th, 25th, 27th, 28th, and 29th of September.

Solar halos were seen on 23 different days during the quarter.

Lunar halos were seen on the 17th and 18th of September.

Auroræ boreales were seen on the 14th of July at Stonyhurst; on the 24th at Silloth; and on the 29th at Cardington. On the 20th of September at Salisbury.

Hail fell on 8 different days during the quarter.

Fog prevailed on 8 days in July, 14 days in August, and on 12 days in September at different stations.

Wheat cut,	the earliest August	2, at Cardington,	and the latest August	31, at North Shields.
Barley cut,	,,	July 30, at Llandudno,	,,	,,	17, at North Shields.
Oats cut,	,,	,, 27, at Strathfield Turgiss,	,,	,,	17, at Calcethorpe.
Cherry ripe,	,,	,, 20, at Helston,	,,	,,	22, at Hastings.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING SEPTEMBER 30TH, 1875.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

Names of Stations and Observers.	Height of Station above Sea Level.	Year 1875. Months.	Pressure of Atmosphere in Month. Mean.	Pressure of Atmosphere in Month. Range.	Temperature of Air in Month. The highest temperatures of the air were at Cambridge, 88°; and Nottingham, 87°.

The lowest temperatures of the air were at Allenheads and Milltown, 37°; and Streatley and Carlisle, 37°·3.

The greatest daily ranges of the temperatures of the air were at Salisbury, 23°; and Gloucester, 21°·9.

The least daily ranges of the temperatures of the air were at Guernsey, 9°·2; and North Shields, 10°·1.

The greatest numbers of rainy days were at Eccles, 56; and Bywell, 55.

The least numbers of rainy days were at Brighton, 31; and at Osborne and Salisbury, 35.

The heaviest falls of rain were at Stonyhurst, 15·33 inches; and Eccles, 15·18 inches.

The least falls of rain were at Osborne, 5·71 inches; and Brighton, 5·86 inches.

Quarterly Meteorological Table for different Parallels of Latitude.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	Wind. Relative Proportion of E.	Wind. Relative Proportion of S.	Wind. Relative Proportion of W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Mean Number of Days it fell.	Rain. Mean Amount collected.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 108.] **Marriages**—*July, August, September*, 1875.
Births and **Deaths**—*October, November, December*, 1875. [Price 9*d.*

General Register Office, Somerset House,
31*st January* 1876.

In the UNITED KINGDOM the *births* of 271,647 children, and the *deaths* of 173,638 persons of both sexes, were registered in the three months ending 31st *December* 1875. The natural recorded increase of population was thus 98,009.

The registered number of persons married in the quarter ending 30th *September* 1875 was 121,344.

The resident population of the United Kingdom in the middle of 1875 is estimated at 32,737,405; that of England and Wales at 23,944,459, of Scotland at 3,495,214, and of Ireland at 5,297,732. The birth-rate in the United Kingdom in the *fourth* quarter of 1875 was 32·9 per 1000, and the death-rate 21·0. The marriage-rate in the *third* quarter of 1875 was 14·7 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2194 Registrars in all the districts of England during the quarter ending 31st December 1875; and the MARRIAGES in 13,644 churches or chapels, in 7536 registered places of worship unconnected with the Established Church, and in 630 Superintendent Registrars' Offices, in the three months ending 30th September 1875.

The marriages in the last quarter of the year in the Established Church are not returned in time for this publication. The returns for the previous quarter prove that the marrying population was in an average state of prosperity, for the rate was very slightly in excess of the rate of the previous ten years. The remarkable feature is that in some of the agricultural counties marriages have declined below their previous low standard. No such decline is observable in the manufacturing districts. The birth-rate of the last quarter of 1875 is above, and the death-rate is below, the average. This is satisfactory, considering that bitterly cold weather prevailed for nearly four weeks of November and December. The days were gloomy; snow fell all over the country. The rain-fall was above the average. The price of food was higher, of fuel lower, than it was in the corresponding quarter of 1874. Pauperism is still declining.

The ruling epidemic disease is scarlet fever, since last year declining to some extent but yet to be watched and guarded against, as it is introduced from village to village, town to town. Small-pox is less fatal than it has been, but the authorities should not on that account be off their guard.

Marriages.

In the three months ending September last, 99,634 persons were married in England and Wales, equal to an annual rate of 16·5 per 1000 persons living. This rate exceeded by 0·1 per 1000 the average rate in the ten preceding corresponding quarters; the rate in the third quarter of these years ranged from 17·3 and 17·2 in 1865 and 1866, to 15·7 and 15·5 in 1869 and 1870. The marriage-rate in the quarter was but 9·7, 10·0, and 10·5 per 1000 in the agricultural counties of Hertford, Suffolk, and Huntingdon, whereas it ranged upwards to 18·4 in Nottingham and the East Riding of Yorkshire, 19·3 in Northumberland, and 20·6 in Lancashire.

The number of marriages recorded in the third quarter of the year in England and Wales exceeded the average number in the three preceding corresponding quarters by 0·6 per cent., although after correction for increase of population a decrease of 1·8 per cent. is showed. In Hertfordshire, Monmouthshire, and Cornwall the numbers of marriages were 20·0, 14·9, and 14·7 per cent., respectively, below the average numbers in the same period of the three years 1872–3–4. On the other hand the marriages in Leicestershire were 13·2, and in Wiltshire 9·9 per cent. above the same average.

Births.

During the last three months of 1875 the births of 209,505 children were registered in the proportion of 104 males to 100 females. The annual birth-rate was equal to 34·7 per 1000 persons living; it exceeded the average rate in the corresponding quarters of the ten preceding years by 0·3 per 1000, whereas it was 0·9 below the rate in the December quarter of 1874. In the fourth quarters of the ten years 1865–74, the lowest birth-rate was 33·6 in 1867 and 1870, and the highest 35·6 in 1874.

The annual birth-rate in the fourth quarter of 1875 did not exceed 28·0 per 1000 in the agricultural counties of the South-western registration Division, whereas it was 38·1 in the York, 38·3 in the North-western, and 40·5 in the Northern Divisions, the population of which is principally engaged in manufacture or mining. The birth-rate was but 25·8 and 26·9 in the counties of Hereford and Huntingdon, whereas it was 40·5 in Stafford, and 43·7 in Durham.

In the eighteen large English towns furnishing weekly returns the birth-rate in the quarter averaged 37·2 per 1000; it exceeded the average rate in England and Wales by 2·5, but was 0·8 below the birth-rate in the same towns in the corresponding quarter of 1874. In these eighteen towns the birth-rate in the quarter ranged from 31·4 in Portsmouth and Norwich, to 41·7 and 46·6 in Oldham and Salford, respectively. In fifty other large towns the birth-rate averaged 35·9 per 1000, against 36·7 in the same period of 1874; it was so low as 24·5 and 26·2 in Bath and Devonport, whereas it was 46·8 in Gateshead, and 47·1 in Wigan.

Movement of the Population.

The natural increase to the population of England and Wales, by excess of births over deaths registered, during the three months ending 31st December was 77,958; in the corresponding periods of 1873 and 1874 the excess of births over deaths was 76,521 and 70,283 respectively.

The actual increase to the English population depends in great measure upon the balance between immigration and emigration. It appears from returns furnished by the Board of Trade that 26,526 emigrants left the principal ports of the United Kingdom, at which emigration officers are stationed, during the last three months of 1875. After distributing proportionately 595 whose nationality was undistinguished, and excluding 3603 foreigners, the emigrants of British origin were 22,923, including 15,530 English, 2666 Scotch, and 4727 Irish. The number of British emigrants in the quarter was 24·3 per cent. below the number in the corresponding quarter of 1874. So few emigrants have not left the shores of the United Kingdom in the corresponding quarter of any year since 1862. The proportions of emigrants in the quarter to a million of the population of the United Kingdom were respectively 649 in England, 763 in Scotland, and

892 in Ireland. The number of emigrants from each part of the United Kingdom has recently declined, the decrease of Irish emigrants being most marked. During the year 1875 the number of Irish emigrants who left the shores of the United Kingdom was but 39,771, whereas the average number in the five preceding years was 72,381; this decrease was equal to 45 per cent. Of the 22,923 British emigrants who sailed during the quarter, 46 per cent. started for the United States, 40 per cent. for the Australian Colonies, 5 per cent. for British North America, and 9 per cent. for all other places. The proportion of emigrants to the United States has recently showed a considerable decline, while that of emigrants to Australia has been steadily increasing.

Prices, Pauperism, and Meteorology.

The average price of wheat in the fourth quarter of 1875 was 46*s.* 7*d.*; 2*s.* 5*d.* lower than in the preceding three months, but 2*s.* 3*d.* higher than in the last quarter of 1874. The mean price of the best potatoes in the quarter averaged 116*s.* 6*d.* per ton in the Borough and Spitalfields markets, against 107*s.* and 84*s.* 6*d.* in the corresponding quarters of 1873 and 1874. The mean price of beef by the carcase at the Metropolitan Meat Market averaged $6\frac{7}{8}d.$, while that of mutton was $7\frac{5}{8}d.$; these prices differed but slightly from those which prevailed in the two preceding quarters; the price of mutton, however, was $1\frac{1}{8}d.$ above the mean price in the first quarter of the year, and higher than at any period since the middle of 1873. The average price per ton of the best seaborne coal in the London market, put in barge from the collier in the Thames, was 22*s.* 6*d.*, against 30*s.* 8*d.* and 24*s.* 7*d.* in the two preceding corresponding quarters. The average price of consols during the quarter was 94*l.* 7*s.* 6*d.*, and corresponded with the price in the preceding three months, which was higher than in any quarter since the fourth of 1868. The average minimum rate of discount charged by the Bank of England during the three months ending 31st December was 3*l.* 4*s.*, showing an increase of 16*s.* upon the average rate in the preceding quarter.

The average number of paupers relieved on the last day of each week in the quarter was 682,367, of which 136,079 received in-door and 546,288 out-door relief. The number of in-door paupers was less by 2·0 per cent. than in the corresponding period of 1874; the decline of out-door paupers was equal to 7·1 per cent. The average weekly number of in-door and out-door paupers was 978,001 in 1870, whereas pauperism has since steadily declined, and in 1875 the average weekly number was but 714,208, showing a decrease of 27 per cent. from the number in 1870. The decline of in-door paupers during these five years was equal to 10 per cent., and of out-door paupers to 30 per cent. In 1870 there were 5·5 out-door paupers to each workhouse inmate; in 1875 this proportion had declined to 4·3.

Remarks upon the meteorology of the quarter and accompanying tables, furnished by Mr. James Glaisher, F.R.S., will be found on pp. 65–72. The month of October was cold and wet, the deficiency of temperature during the first 33 days of the quarter being 1°·8. From 3rd to 20th November a warm period prevailed, during which the excess of temperature averaged 3°·8. The weather was bitterly cold from 20th November to 16th December, and the average deficiency of temperature was 7°·4. During this period the sky was generally overcast, snow fell in all parts of the country, and the wind was northerly. From 17th December to the end of the year mild weather again prevailed, with a south-westerly wind, and the excess of temperature averaged 5°·9. The mean temperature was 48°·5 in October, 42°·1 in November, and 38°·7 in December; the mean of each month was about a degree and a half below the average for the corresponding month in the past 34 years. The mean temperature of the quarter was 43°·1, and 0°·6 below the average for the same period in 104 years; compared, however, with the average in the last 34 years, the deficiency was 1°·5. In the large provincial towns furnishing returns the mean temperature of the quarter ranged from 41°·8 in Wolverhampton to 43°·2 in Leeds.

The amount of rain measured at Greenwich during the three months was 8·1 inches, and exceeded by an inch the average for the corresponding quarter in 60 years. The amounts measured in each of the three months were respectively 4·1

inches in October, 2·9 inches in November, and 1·1 inches in December. The rain-fall showed an excess in October and November, whereas it was nearly an inch below the average in December. The average rain-fall at the various stations of observation between latitude 50° and 55° was 11·3 inches; between 50° and 51° the average fall was 12·4, whereas between 52° and 53° it did not exceed 10·4 inches. The rain-fall measured in the large English towns during the thirteen weeks ranged from 8·4 inches in Liverpool, to 14·3 inches in Bristol. During the year 1875 the rain-fall measured at the Royal Observatory, Greenwich, amounted to 28·2 inches, and exceeded the annual average by 2·9 inches.

State of the Public Health; Deaths.

During the last three months of 1875 the deaths registered in England and Wales were 131,547, and equal to an annual rate of 21·8 per 1000 of the estimated population. The death-rate was 2 per 1000 lower than in the same period of 1874, and 0·4 below the average rate in the corresponding quarters of the ten years 1865–74. The death-rates in the fourth quarters of the 37 years 1838–74 ranged between 19·1 in 1845 and 25·5 in 1846.

The 131,547 deaths included 67,851 of males, and 63,696 of females; the male death-rate was equal to 23·1, and the female rate to 20·6. In equal numbers living, the deaths of males in the quarter were as 112 to each 100 deaths of females; in the preceding three months the proportion was 114 male deaths to 100 female deaths. The relative mortality in the sexes varies considerably in different parts of the country; during the quarter now under notice, in equal numbers living, 113 and 114 males died to each 100 females in the agricultural counties of the Eastern and South-western registration Divisions, in Lancashire the proportion was 117 to 100, and in Durham only 102 deaths of males to 100 of females. The female death-rate in the county of Durham exceeded that in England and Wales by 2·2 per 1000, whereas the death-rate among males scarcely showed any excess.

In the eleven registration Divisions the annual death-rate among persons in the quarter ranged from 17·5 and 18·8 in the principally agricultural counties of the South Eastern and South Midland; to 23·5 and 25·7 in the York and North Western Divisions, which contain a population mainly engaged in manufacture or mining. The lowest death-rates in counties were 15·1 and 16·9 in Westmorland and the extra-metropolitan portion of Surrey; the highest county rates were 23·5 in Yorkshire, 23·8 in Nottinghamshire, 23·9 in Leicestershire, and 26·2 in Lancashire. Among equal numbers living, 173 persons died during the quarter in Lancashire, to each 100 that died in Westmorland.

The unsatisfactory sanitary condition of Lancashire and Yorkshire, and the excessive death-rate which results therefrom, are worthy of national as well as local attention. During the last quarter of 1875 the death-rate in these two counties was equal to 24·9 per 1000, whereas in the rest of England and Wales, including London, it did not exceed 20·8. Thus the high death-rate in these two manufacturing and mining counties of Lancashire and Yorkshire raised the average rate in the whole of England and Wales by one per 1000, to 21·8. In other words, nearly 6000 persons died during the three months in Lancashire, and Yorkshire, who would have survived if the death-rate had not exceeded that which prevailed in the rest of England and Wales. The high death-rate in these two counties is not confined to the large towns, but is also conspicuous in the greater part of the manufacturing small towns and villages with which these counties abound. Take Lancashire as an example. The death-rate in the quarter was 28·1 per 1000 in its ten towns which find a place among the 68 largest English towns, while excluding these ten towns, the rate in the remainder of the county was as high as 24·3; this latter rate signifies that 117 deaths occurred during the quarter in Lancashire, exclusive of its ten largest towns, to each 100 in the whole of England and Wales, exclusive of Lancashire and Yorkshire. The reduction of the waste of life which is continually recorded in these counties, the centre and seat of important branches of industry, is of national importance.

The principal urban population of England and Wales in the middle of the year 1875 was estimated at rather more than thirteen and a half millions of persons, among whom the death-rate in the last quarter of the year was 23·9 per 1000, and

0·9 below the average rate in the same population in the ten preceding corresponding quarters. In the remaining or rural population of about ten millions the death-rate was 18·9 per 1000, and exceeded the same average by 0·3. To each 100 deaths during the quarter in the rural population, 126 deaths occurred among an equal number of persons living in the urban districts. In recent years, however, whereas urban death-rates have been declining, rural death-rates have increased. During the ten years 1865–74 the proportions of urban and rural mortality, in equal numbers living, averaged 127 to 100; in the year 1875 this disparity declined to 118 deaths in town to each 100 in country.

In eighteen of the largest English towns, including London, with an estimated population of rather more than six and a half millions of persons, the death-rate in the quarter averaged 25·2 per 1000, against 22·6, 25·5, and 28·3 in the three preceding corresponding quarters, and exceeded the general urban rate by 1·3. The rates in these eighteen towns ranged from 19·3 and 20·0 in Portsmouth and Sunderland, to 29·7, 30·7, and 33·6 in Bristol, Oldham, and Salford. In Salford the death-rate from all causes, as well as the proportion of deaths referred to the principal zymotic diseases, was excessive throughout the year. In fifty other large towns, having a population of about two millions and three quarters, the death-rate during the last three months of 1875 averaged 22·7 per 1000, was 2·9 below the rate in the corresponding period of 1874, and 2·5 lower than the rate in the eighteen largest towns. Among these fifty towns the rates below 17 per 1000 were 15·7 in Cheltenham, 16·0 in Dover, 16·2 in Rochester and Chatham, and 16·4 in Hastings. The following rates exceeded 30 per 1000:—Gateshead and Preston, each 30·6, Ashton-under-Lyne 31·8, Exeter 33·5, and Stockport 35·2; each of these five towns showed an excessive proportion of zymotic deaths.

The 131,547 deaths at all ages included 31,318 of infants under one year of age, equal to 149 per 1000 of the births registered. Infant mortality, measured in this manner, averaged 148 per 1000 in the five preceding corresponding quarters. In the agricultural counties of the South-eastern Division the proportion of deaths under one year to births registered did not exceed 112 per 1000, whereas it was equal to 173 both in Lancashire, and in Yorkshire. This proportion of infant mortality ranged from 118 in Portsmouth and 151 in Norwich, to 204 and 209 respectively in Oldham and Bradford.

The annual rate of mortality in the quarter among children and adults aged between one and sixty years was equal to 12·4 per 1000 persons living at these ages in England and Wales, and was 1·3 below the rate in the same period of 1874; in the 18 large towns it averaged 15·4 per 1000, and ranged from 9·8 and 10·7 in Sunderland and Norwich, to 19·1 and 22·4 in Manchester and Salford. Among persons aged upwards of 60 years the rate of mortality in the quarter averaged 73·3, against 68·7, 73·4, and 81·1 in the three preceding corresponding quarters. In the 18 large towns the annual death-rate among persons at these ages averaged 83·6 per 1000; it was 68·8 and 69·8 in Leicester and Nottingham, and ranged upwards in the other towns to 96·4 and 130·8 in Oldham and Liverpool. The death-rate among elderly persons in Liverpool continues remarkably excessive. Whereas the death-rate at all ages in the borough during the quarter was as 105 to 100 in the aggregate of the 18 towns, the death-rate among persons aged 60 years and upwards was as 156 to 100.

The 131,547 deaths from all causes registered in the quarter included 6443 which were referred to scarlet fever, 4603 to diarrhœa, 3645 to fever, 2847 to whooping-cough, 1837 to measles, 817 to diphtheria, and 149 to small-pox; in all 20,341 deaths resulted from these seven principal zymotic diseases, equal to an annual rate of 3·4 per 1000. The death-rate from these seven diseases differed but slightly from that which prevailed in the last quarters of 1873 and 1874, and was 0·4 below the average rate in the corresponding quarters of the five years 1870–4. In the eleven Registration Divisions the zymotic death-rate in the quarter did not exceed 2·3 per 1000 in the South-western and South-eastern, whereas it was equal to 4·0 in Yorkshire, and 4·3 both in London and in the North-western Division. In the 18 largest towns it averaged 4·5 per 1000, and ranged from 2·0 and 2·3 in Wolverhampton and Sunderland, to 7·4 and 9·4 in Bristol and Salford. Scarlet fever was remarkably fatal in Bristol, and the excessive zymotic rate in Salford was caused by the fatal prevalence of scarlet fever, whooping-cough, measles, fever, and

small-pox. In the 50 other large towns, the zymotic rate averaged 3·4 per 1000; it was but 1·0 in Cheltenham and Newport, and 1·1 in Dover, whereas it ranged upwards to 7·1 in Ashton-under-Lyne, 8·0 in Stockport, and 11·3 in Exeter. Scarlet fever caused the high zymotic rates in Ashton-under-Lyne and Stockport, and an excessively fatal epidemic of measles prevailed in Exeter. In Salford and Exeter the proportion of zymotic deaths to deaths from all causes in the quarter was so high as 28 and 38 per cent. respectively.

Scarlet fever was by far the most fatal of all the zymotic diseases during the last three months of 1875. The annual death-rate from this disease, which was equal to but 0·4 per 1000 in the first nine months of 1873, steadily increased throughout 1874, in which year it was equal to 1·04 per 1000. The disease continued epidemic throughout the year 1875, and the death-rate, which was equal to 0·86, 0·68, and 0·76 in the first three quarters of the year, further rose to 1·07 in the three months now under notice. As, however, the death-rate from scarlet fever in each quarter of 1875 was lower than in the corresponding period of 1874, it may be hoped that the climax of the present epidemic has passed; the rate for the whole year 1875 was 0·84 per 1000, against 1·04 in 1874. Epidemic scarlet fever is invariably more fatal in urban than in rural populations; during the fourth quarter of 1875 the death-rate from this disease was 0·67 in the South-eastern Division, whereas it was 1·52 and 1·66 in the North Midland and London Divisions. In the eighteen large English towns the death-rate from scarlet fever in the quarter averaged 1·6 per 1000, against 1·1 in the preceding three months, and was equal to 1·7 in London, 2·8 in Leicester, 3·0 in Bradford, 3·2 in Salford, and 5·0 in Bristol. In the fifty large towns ranking next in size the following cases of high death-rates from scarlet fever may be noted; 2·4 in Yarmouth, 2·6 in Birkenhead, 4·2 in Ashton-under-Lyne, 4·4 in Cardiff, and 4·6 in Stockport. The returns as usual show the largest proportional fatality from scarlet fever in smaller towns and villages; from a larger list of those cases, the death-rate from this disease in the following places appears especially noteworthy and indicative of unsatisfactory sanitary condition. The annual death-rate from scarlet fever was about equal to or exceeded 10 per 1000 during the quarter in Chiswick, Luton, Romford, Holt (Norfolk), Swanage (Dorset), Wigston Magna parish (Leicester), Hurdsfield (Cheshire), Whitworth, Blaenavon (Monmouth), and Llangattock sub-district (Brecon). Scarlet fever also showed a marked fatality in Fowey, Redruth, Torquay, Buckfastleigh, Winterton, Keighley, Bootle, Holyhead, and Flint. Epidemics of scarlet fever or of other zymotic diseases may be turned to good account, if they be accepted, as they may almost invariably be, as evidence of the need for sanitary reform, and lead to its adoption.

The returns continue to show a declining death-rate from fever; fever in these returns signifying typhus, enteric or typhoid, and simple continued fever, in the aggregate. The annual death-rate from fever which averaged 0·93 per 1000 in England and Wales during the five years 1865–9, declined to 0·64 in the quinquenniad 1870–4; in 1875 it was 0·52, and lower than in any year for which records exist. In 1875, however, 12,545 deaths were referred to these fevers, and, as it has been estimated that there are about ten recoveries to each death from fever, it may be assumed that nearly 140,000 persons suffered from this disease in England and Wales during the year. Assuming that the average duration of a fever case is five weeks, it would follow that nearly 14,000 persons are even now constantly sick in England and Wales from typhus, enteric, or simple continued fevers; diseases recognised as entirely due to unsanitary conditions. The cost of these 140,000 fever patients to the community, arising partly from their incapacity for work, and partly from expenses of nursing and medical treatment, cannot be put at less than 30*s.* per week for each patient, which would amount to no less a sum than 1,050,000*l.* per annum. In England, fever is most fatal during the last quarter of the year; during the three months ending 31st December 3645 deaths were referred to fever, against 2849 in the preceding three months. The annual death-rate from fever was 0·60 per 1000, against 0·76, the average rate in the five preceding corresponding quarters. In London and in the agricultural counties of the Eastern Division the fever rate last quarter did not exceed 0·38 per 1000, whereas in the mining and manufacturing counties of the North Western and York Divisions, where the midden system prevails, it was 0·87. Fever, of which the largest proportion in

England is enteric, is fatal alike in town and country, wherever insanitary condition favours its development, although as a matter of fact the lowest rates are found in rural counties, and the highest in counties in which the proportion of urban population is large. In Herefordshire the fever rate last quarter was but 0·23, and in the other counties it ranged upwards to 0·92 in Lancashire and in the North Riding of Yorkshire, 0·95 in Durham, and 1·13 in Nottinghamshire. In the eighteen largest towns the fever rate in the quarter was but 0·26 and 0·32 in Sunderland and Newcastle-upon-Tyne, whereas it was equal to 1·11 in Portsmouth, 1·29 in Oldham, and 1·62 in Sheffield. In fifty other large towns the highest fever rates were 1·51 in Stoke-upon-Trent, 1·71 in Walsall, and 2·07 in Wigan. The highest of these urban fever rates were considerably exceeded in many smaller towns and rural villages, among which may be mentioned Winslow, Chipping Norton, Calstock, Hinckley, Uppingham, Stamford, Newark, Chesterfield, Southport, Royton (Lancashire), Rotherham and Kimberworth, Hawes sub-district (North Riding), Lowick (Northumberland), and Llandilotalybont and Bryngwran sub-districts in Glamorganshire and Anglesey, respectively. These local outbreaks of fever are, as usual, mostly attributed to imperfect drainage and impure water, and each of these places now has a sanitary authority responsible for the adoption of precautions which shall prevent the recurrence of similar outbreaks.

The fatality from whooping-cough in the quarter exceeded that which prevailed in any of the three preceding corresponding quarters, and was equal to an annual rate of 0·47 per 1000. The rate from whooping-cough, in the eighteen largest towns, exceeded one per 1000 in Bradford, Liverpool, and Salford. The disease was exceptionally fatal, showing a death-rate of more than 4 per 1000 in Cheshunt, Potton, Stratton, Leek, and Pemberton (Lancashire).

The death-rate from measles was equal to 0·30 per 1000, and somewhat below the average in recent corresponding quarters; the disease caused, however, a death-rate of 4 per 1000 in Carlisle and Guisborough, 6 in Edgware and Wimbledon, and 9 per 1000 in Exeter. The sanitary condition of Exeter, where no less than 76 deaths were referred to measles during the three months under notice, should be rigidly investigated, as epidemics of this intensity, whether of measles or other zymotic disease cannot, in the interest of public health, be safely disregarded. The fatality of measles in Carlisle, following as it does recent epidemics of scarlet fever and enteric fever, affords the strongest presumptive evidence of insanitary condition.

Generally speaking, the mortality from diphtheria has some relation to that from scarlet fever. The 817 deaths referred to diphtheria exceeded the numbers in the two preceding quarters, but were fewer than in the corresponding quarter of last year. At Ore (Sussex) and at Braintree local outbreaks of diphtheria occurred during the quarter.

Diarrhœa was proportionally more fatal in the last three months of 1875 than in the corresponding period in any of the five years 1870–4.

Small-pox caused but 149 deaths during the quarter, a number considerably lower than in any three months since civil registration was established in 1837. Not a single death from this disease occurred among the nearly three millions and a half of persons estimated to be living in London, although 6 deaths were referred to chicken-pox, which until the end of 1875 was returned under the same heading as small-pox. Of 66 deaths from small-pox in the seventeen next largest towns, 32 occurred in Manchester and Salford, (exclusive of 24 in the Monsall Fever Hospital, situated outside the city), 17 in Bristol, and 11 in Leeds, in each of which towns vaccination has been more or less neglected. Fifteen fatal cases occurred in Stockport, 6 in Northfleet, and 3 in Hastings. It is worthy of note, that no death from small-pox was registered either in the Eastern or Northern Counties, and only one in the South Midland and Welsh registration Divisions. The earliest case demands the immediate attention of the Health Officer. Neglect of vaccination is too frequently brought to light only by an outbreak of small-pox.

In workhouse establishments, hospitals, and public lunatic asylums 11,278 deaths were registered during the quarter, or 8·6 per cent. of the total deaths, against 8·8 per cent. in the corresponding quarter of last year. Of these deaths in institutions, 5583 occurred in the eighteen large English towns, equal to 13·3 per cent. of all the

deaths registered therein, whereas in the remainder of England and Wales the proportion did not exceed 6·4 per cent. The proportion of institution deaths in the eighteen large towns ranged from 5·4 and 6·7 per cent. in Oldham and Leeds, to 15·9 and 19·0 per cent. in London and Wolverhampton.

During the three months 7110, or 5·4 per cent., of the deaths were registered from the certificates of coroners; the proportion of such cases to total deaths in England and Wales in the two preceding corresponding quarters was 5·3 and 5·0 per cent. In the eighteen largest towns the inquest cases last quarter averaged 6·4 per cent., but did not exceed 2·7 and 3·7 in Bradford and Portsmouth, whereas the proportion ranged upwards to 8·3 in Birmingham and Wolverhampton, and 8·5 in Manchester. The proportion of inquests held during the quarter in Manchester was more than three times the proportion in Bradford. There is evidently a wide range in the exercise of the discretion vested in coroners as to the necessity for holding inquests. Although now and then complaints are heard that unnecessary inquests are held, in the interests of public safety and of science it is better that too many rather than too few inquests should be held. The holding of an inquest, with a post-mortem examination, is frequently the only means of ascertaining the real cause of death for entry in the death register, especially in the case of deaths of persons who have had no medical attendance during their last illness.

Health of Foreign Cities.

A summary of the weekly returns with which the Registrar General is favoured by various local authorities shows that the average annual death-rate during the last quarter of 1875 in twenty-two Indian and Foreign cities was 26·9 per 1000, against 25.2 in eighteen of the largest English towns. The population of these twenty-two Foreign cities is estimated at about ten millions of persons. The death-rates in each of these cities ranged from 19·6 and 21·7 in Philadelphia and Brussels, to 38·0 in Madras, 38·2 in Alexandria, and 41·5 in Calcutta. Cholera caused, in the thirteen weeks taken to represent the quarter, 635 deaths in Calcutta and 543 in Madras. Fevers caused no less than 534 deaths in Rome, equal to an annual rate of 8·4 per 1000; the largest proportion of these fatal cases of fever were simply described as "eruptive." Diphtheria was fatally epidemic in Berlin, New York, and Brooklyn; and small-pox in Vienna and Brooklyn.

The Year 1875.

In the United Kingdom 1,112,295 births and 726,351 deaths were registered during the year 1875; these numbers give a birth-rate of 34·0, and a death-rate of 22·2 per 1000. The excess of births over deaths was 385,944, and 33,778 less than in the previous year. The natural increase of population is materially affected both by immigration and emigration. Of immigration no satisfactory record exists. Board of Trade returns, however, show that during the year 131,682 emigrants of British origin left the different ports of the United Kingdom at which emigration officers are stationed. This number was 31 per cent. less than the numbers in 1874; the decline was 31 per cent. in English, 29 in Scotch, and 33 in Irish emigrants. Of the 131,682 emigrants in 1875, 80,281 left the shores of the United Kingdom for the United States, 33,310 for the Australian Colonies, 12,117 for British North America, and 5,974 for all other places.

In England and Wales 850,187 births and 546,317 deaths were registered during 1875; the birth-rate was 35·5, and the death-rate 22·8 per 1000 persons living. Each of these rates slightly exceeded the average rates in the ten preceding years. The marriage-rate in the first nine months of 1875 was almost identical with the average rate in the corresponding period of the ten years 1865–74; the marriage returns for the last quarter of 1875 are not yet available.

The 546,317 deaths included 134,294 of infants under one year of age, and 138,662 of persons aged upwards of 60 years. The rate of infant mortality measured by the proportion of deaths under one year to births was 158 per 1000,

against 149 and 151 in the two preceding years ; the rate of infant mortality appears, therefore, to be increasing. The rate of mortality among persons aged 60 years and upwards was 77·5 per 1000 persons living at those ages, against 72·3 and 72·0 in 1873 and 1874. The marked increase in the death-rate among elderly persons in 1875 was in all probability due to the cold and severe weather which prevailed during the winter and early spring.

The deaths registered in England and Wales from all causes during the year included 79,259 which were referred to the seven principal zymotic diseases, showing a decline of 5,860 from those so returned during 1874. These 79,259 deaths included 1000 from small-pox, 5973 from measles, 20,165 from scarlet fever, 3,078 from diphtheria, 13,435 from whooping-cough, 12,545 from fever, and 23,063 from diarrhœa. The rate of mortality from these seven diseases was 3·3 per 1000, against 4·5, 3·8, 2·9, and 3·6 in the four preceding years. The fatal cases of whooping-cough and diarrhœa were more numerous than in 1874, whereas the deaths referred to the five other zymotic diseases showed a decline. The number of deaths from small-pox was smaller than in any year since civil registration was established in 1837. The inquests held in 1875 were 28,041, equal to 5·1 per cent. of the total deaths. The deaths referred to different forms of violence in the year were 17,836.

The foregoing numbers are derived from the Quarterly Returns furnished by the local registrars to the Registrar General immediately after the close of the four quarters of the year, and are subject to revision when the causes of death and other details are finally classified and tabled for publication in the Annual Report.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births,** and **Deaths** registered in **England** and **Wales** in the Years **1865–75,** and in each Quarter of those Years.

* Furnished by the Chief Cashier of the Bank of England.
† As published by the Comptroller of Corn Returns to the Board of Trade.
‡ These are the average prices at which seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

				Dec.	18·8	18·1	17·7	18·4	19·0	19·2	19·5	17·6	17·9	19·9	18·6	18·9

Note.—The three months January, February, March, contain 90, and in leap year, 91 days; the three months April, May, June, 91 days; and each of the last two quarters of the year, 92 days. For this inequality a correction is made in calculating the rate of mortality in the different quarters of the year. The annual rate is the mean of the four quarterly rates.

Note.—The deaths in Manchester and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures for the English towns are the numbers enumerated in April 1871, raised to the middle of 1875 by the addition of four years and a quarter's increase, calculated on the rate which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE VII.—**Deaths** in **18 large English Towns** in the 13 Weeks ending 1st January 1876.

(Estimated aggregate population in middle of 1875, 6,682,033; viz., 3,445,160 in London, and 3,236,873 in the 17 other Towns; see note to Table VI.)

515	York - - - - M† -	58,483	530	345	36·0	23·4	2·6	Bootham, Micklegate, and Walmgate Sub-districts.
	X.—NORTHERN COUNTIES.							
551	South Shields - - M -	93,228	981	502	41·7	21·4	3·0	Entire District.
552	Gateshead - - - M† -	56,147	663	433	46·8	30·6	5·6	Gateshead Sub-district.
554	Tynemouth - - - M† -	43,093	463	234	42·6	21·5	2·3	Nrth. Shields & Tynemouth Sub-ds.
569	Carlisle - - - - M† -	34,781	324	234	37·0	26·7	6·5	St. Cuthbert & St. Mary Sub-dists.
	XI.—MONMOUTHSH. & WALES.							
582	Newport (Monmouth) M† -	32,362	293	148	35·9	18·1	1·0	Newport Sub-district.
583	Cardiff - - - - M† -	74,589	750	470	39·9	25·0	6·7	Cardiff Sub-district.
585	Merthyr Tydfil - - P -	98,576	913	499	36·7	20·1	2·6	Lower and Upper Merthyr Tydfil and Aberdare Sub-districts.
588	Swansea - - - M -	70,521	770	439	43·3	24·7	3·5	Swansea and Llangafelach, and Llansamlet (Neath) Sub-dists.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary.

* For method of framing these estimates see note * to Table VI. As the population of Gosport, Devonport, Coventry, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley and Wigan have been based upon local information as to the increase of the inhabited houses in these two boroughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situate outside that area.

TABLE X.—LONDON—OUTER RING. **Births**; **Deaths** from **All Causes** and from the **Seven Principal Zymotic Diseases**; and the **Annual Rate of Mortality** during the 13 Weeks ending 1st January 1876.

DISTRICTS AND SUB-DISTRICTS.	BIRTHS.	DEATHS.	DEATHS from Seven Zymotic Diseases.	ANNUAL RATE per 1000 living.		
				Births.	Deaths.	Seven Zymotic Diseases.

ROMFORD (*part of*)	161	92	16	40·0	22·8	4·0

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase since 1871 has been the same as that which prevailed between 1861 and 1871. For the purpose of this Table a proportion of the deaths recorded in the two Middlesex County Lunatic Asylums, situated in the Districts of Uxbridge and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE XI.—**Births** and **Deaths** in the **Fourth Quarter** of 1875 in **22 Foreign Cities.**

* The *Registration* or *Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

† The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties. ‡ See page 14, note †.

Note.—*The Registrars alone must be considered responsible for the opinions expressed in the foot notes respecting the prevalence of epidemic diseases, also as to the statements respecting sanitary arrangements, &c. &c.*

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND. rom SMALL-POX, MEASLES, SCARLET-FEVER, DIPHTHERIA, WHOOPING-COUGH, FEVER, NSTITUTIONS registered in the Quarter ending 31st December 1875 in the DIVISIONS, DISTRICTS, and REGISTRATION SUB-DISTRICTS of ENGLAND.

* The *Superintendent Registrars' Districts* are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are 631 in number, and are here arranged topographically under the Registration Counties.

† These figures have been furnished to the Registrar-General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

‡ See page 14, note †.

II.—SOUTH EASTERN COUNTIES.—Superintendent Registrars' Districts—*continued.*

* The present number of Superintendent Registrars' districts is 631. The above numerical arrangement—1 to 627—was adopted on 1st January 1871. Five new Superintendent Registrars' districts, viz., Fulham (1*a*), Prestwich (467*a*), Middlesborough (532*a*), Lanchester (546), and Pontardawe (587*a*), have been constituted; and Shrewsbury (352) has been incorporated with Atcham (351).

I.—LONDON.—Registration Sub-districts.

* The *Sub-districts* (2194 in number) are sub-divisions of *Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† For London the numbers of Births and Deaths, as well as the details given, "Children under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks, viz., from 3rd October 1875 to 1st January 1876.

I.—LONDON.—REGISTRATION SUB-DISTRICTS—*continued.*

* 222 : 3.—Of the 20 deaths from scarlet fever, 12 occurred in Holt. The disease has now abated, but sanitary arrangements are very defective.

† 223 : 2.—Of the 5 deaths from fever, 3 were described as enteric or typhoid. The attention of the sanitary authorities has been called to the deficient drainage, water supply, &c., and many improvements are being actively carried out.

‡ 225 : 5.—Of the 16 deaths from scarlet fever, 14 occurred in Heigham.

§ 229 : 3.—The ages of 9 of the persons aged 60 years and upwards, whose deaths were registered, averaged 76 years.

‖ 230 : 4.—The 4 deaths from diphtheria occurred in Ashwellthorpe, in one family.

¶ 234 : 3.—Scarlet fever of a severe type has been prevalent.

* The Superintendent Registrar's District of Middlesborough (532 *a*) was formed on 1st October 1875. The civil parishes of Acklam, Middlesborough, and Linthorpe (population 39544 in 1871) were severed from the Yarm Sub-district, and Marton (population 856) from the Stokesley Sub-district to form the Sub-district of Middlesborough; the civil parishes of Ormesby, Eston, and Normanby (population 11938) from the Kirk-Leatham Sub-district to form the Sub-district of Ormesby; the civil parishes of Hemlington (population 101 from the Sub district of Stokesley), Stainton, Maltby, Ingleby-Barwick (population 631 from the Sub-district of Yarm) and Thornaby with South Stockton (population 6967) from the Sub-district of Stockton to form the Thornaby Sub-district. At the same time the following civil parishes were transferred, viz., Brotton (population 2672) from the Marske Sub-district to Lofthouse Sub-district; Kirk-Leatham and Wilton (population 3058) from the Kirk-Leatham Sub-district to Marske Sub-district; Eggleseliffe, Aislaby, Newsham, Billingham, Cowpen-Bewley, Newton-Bewley, and Wolviston (population 3478) from the Yarm Sub-district to Stockton Sub-district; High Worsall, Low Worsall, Kirk-Leavington, Castle-Leavington, Pickton, and Yarm (population 2051) from the Yarm Sub-district to Stokesley Sub-district. By these alterations all the parishes in the Sub-districts of Kirk-Leatham and Yarm are absorbed in other Sub-districts.

† The averages of deaths inserted for the Sub-districts of Lofthouse (532: 1); Marske (532: 2); Middlesborough (532*a*: 1); Ormesby 532*a*: 2); Thornaby (532*a*: 3); Stokesley (533: 1); and Stockton (541: 1) have been derived from the numbers of deaths registered within the limits of the Sub-districts as at present constituted.

* 622 : 1.—Scarlet fever, which was prevalent during the greater part of the quarter, is now subsiding.
† 622 : 2.—Of the 17 deaths from scarlet fever, 8 occurred in the parish of Festiniog and 7 in Maentwrog : 4 were registered in October, 5 in November, and 8 in December.
‡ 624 : 2.—The ages of the 18 persons aged 60 years and upwards, whose deaths were registered, averaged 75 years.
§ 624 : 3.—The Registrar says that he believes the rural part of his sub-district is at the present time free from scarlet fever.
‖ See page 13, note *.
¶ 627 : 6.—Of the 17 deaths from scarlet fever, 10 were registered in November, and 7 in December.

Remarks on the Weather during the Quarter ending December 31st, 1875.

By James Glaisher, Esq., F.R.S., *&c.*

The month of October was generally cold and wet. The temperature of the air was for a few days together a little in excess of the average temperature, then for several days in defect, and so successively till November 2nd, the average daily deficiency of temperature for the first 33 days of the quarter being 1°·7. On November 3rd a warm period set in and lasted till the 19th, not continuously, as for 3 or 4 days the temperature fell below its average. The average daily excess of temperature for this period was 3°·0. On November 20th a bitterly cold period commenced and continued till December 16th, the average daily deficiency of temperature being 7°·4. The temperature on several days together was more than 10° in defect, on December 4th and 5th it was about 14½°, and the average daily defect from November 30th to December 7th was 12°. During this period the sky was almost always overcast, snow fell all over the country, and drifted in some places to a great depth; the wind was N. and N.E., and the air was very cold; and owing to the cloudy state of the sky the general deficiency of temperature was chiefly due to the want of heat during the daytime.

The average maximum of the temperatures at the end of November and beginning of December is about 46° or 47°. The following table shows the highest temperatures of the air, as noted at the different stations, and the deficiency of day temperature will be seen by subtracting the observed temperature from 46° or 47°.

On looking over this table it will be seen that the severity of the weather fell more upon the Midland districts than on either the extreme Northern or extreme Southern stations, and that on several days the highest temperature in the former was about 32° only.

From the 17th of December to the end of the year the weather was mild, the wind was from the S.W., and the daily temperature was in excess of the average to the mean amount of 5°·9 daily.

The readings of the barometer at 160 feet above the level of the sea in the neighbourhood of London were alternately above and below their averages for 2 or 3 days together from the 1st to the 10th of October; below their averages from the 11th to the 23rd, above their averages from the 24th to the end of the month, with the exception of the 27th and 31st, which were 0·18 in.

and 0·03 in. below. The greatest departure in excess of the average was 0·58 in. on the 6th, and the greatest departure in defect was 0·67 in. on the 13th. In November the readings of the barometer were below their averages from the 1st to the 14th; above their averages from the 15th to the end of the month, with the exception of the 19th and last day, which were 0·24 in. and 0·04 in. below. The greatest departure in defect of the average was 1·01 ins. on the 10th, and the greatest departure in excess was 0·31 in. only on the 23rd. From the 1st to the 4th of December the barometer readings were below their averages; from the 5th to the 16th the readings were above their averages; from the 17th to the 22d they were below, and from the 23d to the end of the year they were above. The greatest departure in excess of the average was 0·45 in. on the 8th; the greatest departure in defect was 0·36 in. on the 19th.

At Greenwich *the mean temperature* of October was 11°·5 lower than in September; that of November was 6°·4 lower than in October; and that of December 3°·4 lower than in November. (From the preceding 34 years' observations the mean temperature of October is 7°·0 lower than in September; that of November is 6°·6 lower than in October; and that of December is 3°·5 lower than that of November.)

The mean temperature of the air for October was lower than that of September at the extreme Southern and Northern stations by amounts somewhat less than at the Midland stations; the mean of all was 10°·2; that of November below that of the preceding month was very nearly the same everywhere; the mean of all was 7°; that of December below that of November was very different at different parallels of latitude; South of latitude 51¼° it was 4°·2; between 51¼° and 52° it was 3°·6; between 52° and 52½° it was 2°·7; from 52½° to 53½° it was 1°·8, and North of 53½° it was 0°·9 only.

The mean temperature of the air for October was 48°·5, being 1°·1 lower than the average of the preceding 104 years, and 1°·7 lower than the average of the preceding 34 years; it was 0°·7 higher than the value in 1873, and 3°·2 lower than in 1874.

The mean temperature of the air for November was 42°·1, being 0°·2 and 1°·5 lower than the average of the preceding 104 years and 34 years; it was 2°·1 lower than the value in 1873, and 0°·1 higher than in 1874.

The mean temperature of the air for December was 38°·7, being 0°·4 lower than the average of the preceding 104 years, and 1°·4 lower than the average of the preceding 34 years; it was 1°·9 lower than the value in 1873, and 5°·5 higher than in 1874.

The mean high day temperatures of the air were 1°·7, 1°·4, and 2°·4 lower than their respective averages in October, November, and December.

The mean low night temperatures of the air were 1°·5 and 0°·9 lower than their respective averages in October and December, but 0°·2 higher in November.

The mean daily ranges of temperature were 1°·1, 1°·6 and 1°·3 less than their respective averages in October, November, and December.

At Greenwich the decrease of atmospheric pressure from September to October was 0·259 in., the increase from October to November was 0·022 in., and the increase from November to December was 0·307 in. Over the whole country there was a very uniform decrease of pressure from September to October to the mean amount of 0·254 in., from October to November there was an average increase of 0·039 in., and from November to December there was an increase somewhat smaller at extreme North stations, the mean of all being 0·274 in.

The beginning and middle of the month of October was wet, and the fall of rain was in excess and caused destructive floods in many places. The fall of rain at Leicester on 9th October was 2·24 ins. in 10 hours. In November the fall of rain at most places was in excess, and in December was generally in defect.

At Greenwich the fall of rain in October was 4·1 ins. exceeding the average by 1·3 ins.; the heaviest fall in one day was 0.79 in. on the 19th; in November the fall was 2·9 ins., exceeding the average by 0·6 in.; the heaviest fall in one day was 0·59 in. on the 13th; and in December the fall was 1·1 ins., being 0·9 in. less than the average.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follows:—

Direction of Wind.	October.			November.			December.		
	Average.	1875.	Departure from Average.	Average.	1875.	Departure from Average.	Average.	1875.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	2	2	0	2¼	4	+1¾	2	2	0
N.	3	2	−1	3¾	3	− ¾	2¾	4	+1¼
N.E.	2½	3	+ ½	3½	7	+3½	2	3	+1
E.	1	4	+3	2	1	−1	1¾	1	− ¾
S.E.	1¾	6	+4¼	2	3	+1	1¾	1	− ¾
S.	3½	4	+ ½	3½	4	+ ½	3	4	+1
S.W.	9¼	5	−4¼	7¾	5	−2¾	9¾	12	+2¼
W.	4¼	5	+ ¾	2	4	+2	4	4	0
Calm (nearly.)	3¾	0	−3¾	3¼	0	−3¼	4	0	−4

The + signs denote excesses over averages; in the month of October the largest number affected with this sign is opposite to S.E., in November to N.E., and in December to S.W. and N.

The − signs denote below averages; in October the largest number with this sign is S.W., in November is S.W., and in December is E. and S.E.

NOTE.—In reading this table it will be borne in mind that the minus sign (−) signifies below the average, and that the plus sign (+) signifies above the average.

Thunderstorms occurred, on the 5th of October at Cockermouth and Bywell; on the 11th at Guernsey, Llandudno, and Bywell; on the 12th at Guernsey; on the 19th at Guernsey, Bournemouth, Salisbury, Streatley, and Oxford; on the 21st at Hastings, Royston, and Cardington; and on the 22nd at Ramsgate, Norwich, and Hull. On the 7th of November at Guernsey, Truro, Osborne, and Bournemouth; on the 10th at Ramsgate; on the 11th at Hastings, and Eccles; on the 14th at Guernsey; on the 20th at Norwich; and on the 26th and 29th at Guernsey. On the 4th of December at Guernsey; on the 5th at Bywell; and on the 22nd at Carlisle and Bywell.

Thunder was heard, but lightning was not seen, on the 4th of October at Ramsgate; on the 5th at Silloth; on the 11th at Wisbech; and on the 21st at Cambridge. On the 8th of November at Carlisle; and the 9th at Strathfield Turgiss. On the 22nd of December at Stonyhurst.

Lightning was seen, but thunder was not heard, on the 2nd of October at Cambridge; on the 11th at Hastings and Cambridge; on the 12th at Osborne, Hastings, Salisbury, Ramsgate, and Wisbech; on the 18th at Strathfield Turgiss; on the 19th at Oxford; on the 20th at Osborne; on the 21st at Ramsgate, Strathfield Turgiss, Oxford, Cambridge, Norwich, and Calcethorpe; and on the 28th at Salisbury. On the 5th of November at Norwich; on the 8th at North Shields; and on the 11th at Halifax and Carlisle. On the 19th of December at Salisbury; on the 21st at North Shields; and on the 22nd at Oxford, Cambridge, Hull, and Silloth.

Solar halos were seen on the 7th and 13th of October at Hastings; on the 17th at Hastings, Weybridge Heath, Cardington, and Wisbech; on the 23rd at Halifax; on the 25th at Oxford and Halifax; and on the 26th at Calcethorpe. On the 7th of November at Hastings; on the 9th at Calcethorpe; on the 11th at Strathfield Turgiss and Oxford; on the 12th at Hastings, Strathfield Turgiss, and Oxford; on the 15th at Carlisle; and on the 17th at Hastings and Oxford. On the 10th of December at Hastings, Cardington, Wisbech, Calcethorpe, and Halifax; on the 20th at Halifax; on the 21st at Hastings and Oxford; and on the 29th at Hastings.

Lunar halos were seen on the 11th of October at Oxford; on the 13th at many places; and on the 17th at Ramsgate and Oxford. On the 8th of November at Taunton and North Shields; on the 9th at North Shields; on the 10th at Cockermouth; on the 11th and 12th at most stations; on the 14th at Ramsgate; and on the 15th at Oxford and Halifax. On the 5th of December at Leicester; on the 9th at Hastings, Halifax, and Cockermouth; on the 10th at Cardington; on the 11th at Oxford, Gloucester, and Cockermouth; on the 13th at Oxford; and on the 19th at Salisbury.

Auroræ boreales were seen on the 2nd of October at Weybridge Heath and Silloth. On the 5th and 6th of November at Cardington. On the 8th of December at North Shields; and on the 21st at Weybridge Heath.

Snow fell on the 12th of October at Cockermouth; and on the 31st at Allenheads. On the 3rd, 6th, and 7th of November at Bournemouth; and generally all over the country from the 25th to the 9th of December.

Hail fell on 8 days in October; 20 days in November; and on 10 days in December.

Fog prevailed on 12 days in October; 16 days in November; and on 15 days in December.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING DECEMBER 31ST, 1875.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the fifth edition of his Hygrometrical Tables.

Names of Stations and Observers.	Height of Station above Sea Level.	Year 1875. Months.	Pressure of Atmosphere in Month. Mean.	Pressure of Atmosphere in Month. Range.	Temperature of Air in Month. Highest.	Lowest.	Range.	Mean of all Highest.	Mean of all Lowest.	Mean Daily Range.	Mean Temperature. Air.	Dew Point.	Vapour. Elastic Force.	In a cubic foot of Air. Mean.	Short of Saturation.	Mean Degree of Humidity. Sat^{n}. = 100.	Mean Weight of a cubic foot of Air.	Mean Reading of Thermometer. Maximum in Rays of Sun.	Minimum on Grass.	Wind. Estimated Strength.	Relative Proportion of N.	E.	S.	W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Number of Days it fell.	Amount collected.

The highest temperatures of the air were at Salisbury, 73°; and at Chiswick, 71°.

The lowest temperatures of the air were at Lampeter, 13°; and at Chiswick 16°·7.

The greatest daily ranges of the temperatures of the air were at Salisbury, 14°·8; and at Gloucester, 13°·9.

The least daily ranges of the temperatures of the air were at Guernsey, 7°·2; and at Liverpool, 7°·6.

The greatest numbers of rainy days were at Allenheads, 75; and at Bywell, 72.

The least numbers of rainy days were at Ramsgate, 39; and at Strathfield Turgiss, 40.

The heaviest falls of rain were at Allenheads, 18·98 inches; and at Lampeter, 16·26 inches.

The least falls of rain were at Chiswick, 7·59 inches; and at Cambridge, 7·85 inches.

Quarterly Meteorological Table for different Parallels of Latitude.

PARALLELS OF LATITUDE, &c.	Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Wind. Mean Estimated Strength.	Wind. Relative Proportion of N.	Wind. Relative Proportion of E.	Wind. Relative Proportion of S.	Wind. Relative Proportion of W.	Mean Amount of Ozone.	Mean Amount of Cloud.	Rain. Mean Number of Days it fell.	Rain. Mean Amount collected.

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each SUPERINTENDENT REGISTRAR'S DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

Aberayron, 600.
Abergavenny, 579.
Aberystwith, 601.
Abingdon, 114.
Alcester, 398.
Alderbury (Salisbury), 254.
Alnwick, 560.
Alresford, 104.
Alston, 565.
Alton, 105.
Altrincham, 447.
Alverstoke, 88.
Amersham, 139.
Amesbury, 253.
Ampthill, 172.
Andover, 109.
Anglesey, 627.
Ashborne, 440.
Ashby-de-la-Zouch, 407.
Ashton-under-Lyne, 468.
Aston, 388.
Atcham (Shrewsbury), 351.
Atherstone, 390.
Auckland, 543.
Axbridge, 315.
Axminster, 269.
Aylesbury, 142.
Aylsham, 223.
Aysgarth, 537.

Bakewell, 442.
Bala, 620.
Banbury, 154.
Bangor, 625.
Barnet, 127.
Barnsley, 505.
Barnstaple, 285.
Barrow-upon-Soar, 409.
Barton-upon-Irwell, 464.
Basford, 431.
Basingstoke, 107.
Bath, 317.
Battle, 68.
Beaminster, 267.
Bedale, 535.
Bedford, 170.
Bedminster, 319.
Bedwelty, 580.
Belford, 561.
Bellingham, 558.
Belper, 439.
Berkhampstead, 138.
Berwick, 562.
Bethnal Green, 15.
Beverley, 518.
Bicester, 150.
Bideford, 287.
Biggleswade, 171.
Billericay, 190.
Billesdon, 403.
Bingham, 436.
Birkenhead, 454.
Birmingham, 387.
Bishop Stortford, 130.
Blaby, 404.
Blackburn, 474.
Blandford, 260.
Blean, 57.
Blofield, 228.
Blything, 216.
Bodmin, 294.
Bolton, 462.
Bootle, 573.
Bosmere, 211.
Boston, 418.
Bourn, 415.
Brackley, 155.
Bradfield, 117.
Bradford-on-Avon, 249.
Bradford (York), 496.
Braintree, 199.
Bramley, 499.
Brampton, 567.
Brecknock, 604.
Brentford, 125.
Bridge, 55.
Bridgend, 586.
Bridgnorth, 348.
Bridgwater, 307.
Bridlington, 524.
Bridport, 268.
Brighton, 76.
Bristol, 320.
Brixworth, 161.
Bromley, 40.
Bromsgrove, 385.
Bromyard, 341.
Buckingham, 145.
Builth, 603.
Burnley, 472.
Burton-upon-Trent, 368.
Bury, 463.
Bury St. Edmunds, 206.

Caistor, 425.
Calne, 245.
Camberwell, 25.
Cambridge, 178.
Camelford, 290.
Canterbury, 56.
Cardiff, 583.
Cardigan, 597.
Carlisle, 569.
Carmarthen, 593.
Carnarvon, 624.
Castle Ward, 555.
Catherington, 102.
Caxton, 176.
Chapel-en-le-Frith, 443.
Chard, 309.
Cheadle, 366.
Chelmsford, 191.
Chelsea, 2.
Cheltenham, 335.
Chepstow, 577.
Chertsey, 30.
Chester, 452.
Chesterfield, 441.
Chester-le-Street, 549.
Chesterton, 177.
Chichester, 83.
Chippenham, 244.
Chipping Norton, 153.
Chipping Sodbury, 322.
Chorley, 475.
Chorlton, 465.
Christchurch, 92.
Church Stretton, 346.
Cirencester, 331.
Cleobury Mortimer, 347.
Clifton, 321.
Clitheroe, 473.
Clun, 345.
Clutton, 316.
Cockermouth, 571.
Colchester, 195.
Congleton, 450.
Conway, 626.
Cookham, 120.
Corwen, 619.
Cosford, 204.
Coventry, 393.
